### Contents

Attendance of the course "How to read a paper"; seminar paper in the form of a paper review; regular attendance of the research seminar of the Institute of Clinical Epidemiology and Biometry (ICE-B) and/or a co-operating institution; delivering a talk.

### Intended learning outcomes

The students know the requirements regarding the structure and content of publications in the context of various study designs. They also know typical pitfalls for authors and readers. By writing a review on a published paper, they have practised to critically reflect strengths and shortcomings of scientific work. The students actively participate in the discussion of topical (internationally relevant) research. Delivering a presentation on a topic of their choice, students have learned to select relevant sources, to prepare them for presentation and to develop a critical view on published material.

### Courses

S (4) + K (2)
Module usually taught in English

### Method of assessment

oral examination of one candidate each (approx. 45 minutes)
Language of assessment: German or English
creditable for bonus

### Allocation of places

--

### Additional information

--

### Referred to in LPO I

(examination regulations for teaching-degree programmes)

--

### Module appears in

Master's degree (1 major) Clinical Research and Epidemiology (2015)
