Intended learning outcomes		
<p>Students consolidate their knowledge and qualifications concerning the sub-discipline didactics, which has not been chosen in the advanced module, in order to extend their subject-didactic competency and contemplation skills for an integrative German class. Next to theory and practice references, students will acquire current empirical findings of the teaching and learning research in particular and apply these findings to contents of a German class in a subject-didactic contouring. For this, they acquire on the basis of current research literature the required knowledge, which they will present during the course in an appropriately way and dialogically interview about possibilities to affiliate the subject teaching. This acquisition, mediation, presentation and evaluation of contents have to be seen as extension of the self-competence considering the technical contents. Moreover, students acquire fundamental knowledge of a course associated empirical established perception and control of specific teaching and learning processes in pedagogical contexts. Students are able to deal with reading matter that associates the course as well as with educational material, textbook or competent sources, which are relevant for German class. Furthermore, students independently work out a current publication from the specialised teaching and learning research in linkage to the course object and introduce this to the seminar context in an appropriate and self chosen presentation form. In this way, they extend, next to their methodological competence, the dealing with academic texts and current research literature.</p>
