<b>Contents</b>		
Exploitation and use of mineral resources are essential economic geographic parameters, which among others influence the economic, political and social relations between nations strongly. Main topics of this module are fundamental economic geological principles, a simple classification of deposit types according to genetic aspects and the evaluation of mineral deposits. For chosen and current examples, students will acquire a view on the availability and world market situation of essential mineral resources.		
<b>Intended learning outcomes</b>		
Students learn further technical theories and achieve solid skills in a further sub-area of Human Geography or Physical Geography and the applied implementation.
