<b>Contents</b>		
<p>In this module we elaborate on central topics of various sports science disciplines, compare them to the current state of research of the respective discipline and determine their effects on movement, game and sport practice at and outside of school. We develop and evaluate disciplinary and interdisciplinary theories, models, methods and concepts of sports science and discuss their contribution to and significance for the understanding of movement, game and sport practice. The students advance their technical knowledge about the backgrounds and topics of sports by either attending a seminar about the scientific core disciplines of sports education, about training science or about movement science.</p>		
<b>Intended learning outcomes</b>		
<p>The students have advanced knowledge and professional skills in the central topic areas of one of the core disciplines of sports science. They know the current discourse on the subdisciplines of sports education and subject didactics, science of training or science of movement and are able to place it in the appropriate context of current research results. They know the essential technical terms, systematics, models and methods and are able to estimate their importance for well-founded, sophisticated and target group oriented teaching/learning situations.</p>
