Contents

In this module we examine central teaching concepts and models of the didactics of physical education games on the basis of general ball sports. We test our knowledge about the didactics of physical education games in practice in accordance with differentiated guidelines regarding performance and teaching.

Intended learning outcomes

The students use examples from ball sports to acquire advanced professional skills in the area of comprehensive or integrative physical education. By combining theory and practice, the students are able to break away from everyday theories and pre-scientific knowledge about teaching sports and physical education games. Their theoretical knowledge about subject didactics enables them to evaluate phenomena, structures and teaching topics of ball sports. They examine the basics of a selected approach that is suitable for the requirements of an exemplary movement field. In doing so, they become able to transfer their knowledge as well as methods of game analysis and methods of teaching physical education games to other physical education games or other game topics. As a result, the students become acquainted with a variety of didactic approaches to teaching sports which they can apply and evaluate in practice.
