<b>Contents</b>		
<p>In this module, students work on a scientific question stemming from one of the research teams involved in the study program. In doing so, they apply the methods of the discipline. The duration of the work is limited to a defined period of time. The students are supervised by a member of one of the research teams involved in the program.</p>		
<b>Intended learning outcomes</b>		
<p>Students will be able to identify a scientifically relevant question, examine the state of research, and describe and evaluate it in order to derive research desiderata and research questions. They develop a methodical approach and test hypotheses/answer the research questions. The goal is to gain knowledge against the background of existing theories and findings. In empirical work, students learn to collect data for hypothesis testing and to evaluate it in a methodologically correct way. Furthermore, students will be able to write scientific papers according to the requirements of the discipline.</p>
