| <p>Practical experience is a necessary skill for scientific research. This applies in particular to human-computer interaction (HCI), which requires technical, psychological and empirical skills. In this module, students work on a specified research project or task that they have to solve mostly independently. The topic is derived from research on human-computer interaction and combines technical and empirical or psychological aspects.</p> | | |
| Intended learning outcomes | | |
| <p>After participating in the module courses, students are able to apply their methodological and content knowledge with an interdisciplinary informatics and/or psychology focus. They can work according to self-created structured processes and develop their methodological competence, communicative competence and cooperation skills.</p> | | |
| Courses (type, number of weekly contact hours, language – if other than German) | | |
| Ü (1) | | |
| Method of assessment (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus) | | |
| <p>report (approx. 15 pages) Language of assessment: German and/or English creditable for bonus</p> | | |
