<b>Contents</b>		
<p>In this module, we discuss the peculiarities of applying diagnostic test methods when working with physically disabled children and juveniles. In addition, we address and practise further essential diagnostic methods (such as anamnesis, monitoring etc.). We formulate support measures based on the diagnostic findings. All contents are supposed to be applied and reflected in a specific support assessment and adapted to a corresponding individual case.</p>		
<b>Intended learning outcomes</b>		
<p>The students acquire basic knowledge of different diagnostic methods. They know about the applicability of diagnostic procedures when working with physically disabled children and juveniles. They are able to apply this knowledge to special individual cases by carrying out a diagnostic assessment of the support needs of a specific child. In doing so, they can apply their knowledge to describe possible effects of physical impairments and special developmental processes on different developmental areas. Based on this knowledge, they are able to develop and formulate individual support methods.</p>
