<b>Contents</b>		
<p>In this module, the students acquire basic knowledge of the subject, phenomena, theories and methods of General Psychology. They become acquainted with the principles of human learning, action control, perception, attentiveness, concept formation, speech, memory and knowledge. In the seminar, the students gain knowledge of current research results of selected subdisciplines of General Psychology. In the practical part, they become familiar with experimental techniques of General Psychology.</p>		
<b>Intended learning outcomes</b>		
<p>This module enables the students to factor in findings of General Psychology when carrying out own actions as well as when dealing with applied psychological problems, for example when creating websites or learning environments. These factors might include findings about the principles of human attentiveness or human memory. Furthermore, they acquire competencies in planning, carrying out and evaluating scientific experiments. These competencies serve as a foundation for independent scientific work. In addition, the students learn to give scientific presentations and to write scientific reports.</p>
