<b>Module coordinator</b>		<b>Module offered by</b>
holder of the Professorship of Experimental Clinical Psychology, holder of the Professorship of Clinical Psychology, Biological Psychology and Psychotherapy		Institute of Psychology
<b>ECTS</b>	<b>Method of grading</b>	<b>Only after succ. compl. of module(s)</b>
5	numerical grade	--
<b>Duration</b>	<b>Module level</b>	<b>Other prerequisites</b>
2 semester	undergraduate	--
<b>Contents</b>		
<p>In this module, the students acquire basic knowledge of Biopsychology which deals with biological processes associated with intrapsychic processes. In the first part of the lecture, the students gain methodological knowledge and become familiar with a broad range of non-invasive research methods used in Biopsychology. The first part especially focuses on techniques of human subject research (e.g. EEG, MRI, peripheral physiology, neurostimulation) which are illustrated with examples of current research. In the second part, the students become acquainted with the biological principles of the main mental functions (biological rhythms and sleep, learning and memory, attentiveness, emotion and motivation, social behaviour, executive functions, speech).</p>		
<b>Intended learning outcomes</b>		
No information on intended learning outcomes available.		
<b>Courses</b> (type, number of weekly contact hours, language — if other than German)		
V (2) + V (2)		
<b>Method of assessment</b> (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)		
written examination (approx. 120 minutes) Language of assessment: German and/or English		
<b>Allocation of places</b>
