<p>Psychological diagnostics entails professional action and decision making according to strict methodological criteria. Therefore, diagnostics is subject to its own scientific and pragmatic standards. This module introduces the corresponding methods and approaches to the identification of individual differences by means of observation, questioning, testing and questionnaires as well as the recording in reports and assessments. Furthermore, it elaborates on classical test theory and probabilistic test theory. In addition, it provides a technical introduction to selected psychodiagnostic methods. The lecture deals with approaches to professional scientific action and decision making which are exercised in the practical parts.</p>
