Contents		
<p>The module offers detailed insights into the principles of Clinical Psychology and Intervention Psychology with a focus on diagnostics, epidemiology, aetiology and therapy of the main psychopathologies. The lecture provides an introduction to the methods of Clinical Psychology and Experimental Psychopathology and discusses the main clinical pictures relevant to clinical practice. In the lecture on Intervention Psychology, the students acquire basic knowledge of the theoretical and practical framework conditions of intervention and psychotherapy. It provides an overview of selected psychotherapeutic methods and their scientific principles. It focuses on giving a detailed description of the interventions while also showing how individual interventions can be applied to or also modified for specific clinical pictures; the seminars elaborate on the application and modification of these intervention methods as well as on alternating subject areas of Clinical Psychology and Intervention Psychology. Furthermore, the application and commonness of psychotherapeutic methods are discussed.</p>		
Intended learning outcomes		
<p>The students acquire professional skills in the field of Clinical Psychology and Intervention Psychology and are therefore able to classify the main psychopathologies, they know the main aetiological models of these disorders and can evaluate classical therapeutic approaches. This basic methodological knowledge enables the students to critically evaluate future research findings. The students acquire profound, theoretical professional skills as well as comprehensive methodological competencies in the field of Intervention and Psychotherapy Research and its practical application. They apply their advanced professional knowledge during the further course of studies, especially during the writing of their Bachelor's thesis and during the Master's degree programme.</p>
