<b>Contents</b>		
<p>In project work, the students form small groups to carry out a study in the field of Clinical Psychology and experimental psychopathology. First, they become familiar with theoretical principles and develop an experimental design in seminars and tutorials. Next, they are introduced to independent work and become acquainted with data collection, evaluation and interpretation under the guidance of a supervisor. After discussing the results, the students write individual reports in the form of manuscripts following the guidelines of the DGPs (German Society for Psychology) /APA (American Psychological Association). In the following seminar, which builds upon the project work, the students give oral presentations discussing fundamental works relevant to the project as well as the results of the project work or principles or results of the intended Master's thesis.</p>
