## Contents

In this module, the students acquire basic knowledge of the principles of thinking, feeling and behaviour in a social context. The lecture comprises the subject areas, theories and methods of Social Psychology, including applied socio-psychological questions. The seminar elaborates on selected, alternating subject areas (e.g. social cognition, research on attitude, prejudices). In the second part of the module, the students carry out exercises on the subject contents and critically examine relevant literature to prepare for the examination.

### Intended learning outcomes

The students acquire professional skills and social competencies, which can be useful for everyday situations. They gain profound professional knowledge of central subject areas, theories and methods of Social Psychology while also learning to transfer this basic knowledge to application subjects, especially the one’s of the Master’s degree programme. Furthermore, the students already acquire theoretical, empirical and application-oriented competencies, which can be useful in everyday life (e.g. for solving social conflicts and central problems of social influenceability), after finishing the first university degree programme (BSc.).
