Contents		
Scientifically sound case presentation (Bachelor's thesis approx. 50 pages) in due consideration of speech therapeutic and/or interdisciplinary diagnostics and evidence-based therapy planning as well as discussion of the current state of research		
Intended learning outcomes		
Professional competence: The students advance their scientific practice skills and acquire different techniques to describe research contents according to the target group. Implementation competence: The students experiment with different forms of presentation and acquire the ability to develop a question relevant to speech therapy/logopaedics. They are able to independently analyse and organise a predetermined or self-posed question. They research relevant current literature. After developing a question based on hypotheses, the students work on the answer while following a reasonable line of argument. They choose a clear description in line with scientific concepts. Social-communicative competence: The students acquire the ability to closely work on self-posed questions in peer groups and test techniques of giving and taking feedback. They present and discuss the results in a scientific manner. Personal competence: The students work out strategies to work on the predetermined task and adopt a proper level motivation. Furthermore, they evaluate own strengths and weaknesses in a realistic manner and acquire the ability to compensate for their weaknesses. Reflection competence: The students understand the necessity of evaluating own scientific competencies in the context of their Bachelor's thesis.
