2 semester	undergraduate	--
<b>Contents</b>		
<p>In this course we talk about questions and issues of sports science and evaluate them from an interdisciplinary point of view (natural, human and social sciences). We focus on the theoretical examination of central principles of sports education and social sciences and establish connections to topics from movement, game and sports culture. The students acquire interdisciplinary scientific knowledge about the backgrounds and topics of sports. Therefore, they develop the ability to understand and analyse actions of sports and movement culture in view of social and human sciences. In the area of sports education the students learn about the basic principles of physical education in the context of sports activities and acquire basic knowledge about education theory and its historical principles. In the area of the principles of social science and social psychology we discuss central theories, models, methods and concepts of sociology, psychology, and cultural theory and elaborate on their contributions to the understanding of our movement, game and sports culture.</p>		
<b>Intended learning outcomes</b>		
<p>The students have essential professional skills in carrying out research and working in the field of sports science, sports education and sociology/social psychology of sports. They know the principles of movement culture in view of education theory and sport sociology and are able to put these principles into practice. They have acquired differentiated professional and methodological competencies in the area of sports education and sports sociology by examining and comparing central terms, systematics, models, concepts and methods of the disciplines of sports science that are relevant to humanities and social sciences.</p>
