<p>Environmental movements have played a significant role in politics since the second half of the 20th century. This is not only related to the emergence of ecological parties, but also to their autonomy as an object of research. The module is therefore dedicated to different questions connected with the phenomenon of the environmental movement(s). From a comparative perspective, various questions suggest themselves here: What goals do the environmental movements pursue? What means and strategies do they use to achieve these goals? How do the movements differ with regard to their internal structure and their members? How can they be distinguished from other social movements? What influence did and do these movements have with regard to politics, but also society as a whole?</p>		
Intended learning outcomes		
<p>In this module, students will get to know different theoretical and methodological approaches to address the above-mentioned questions. They will learn to use these approaches appropriately and to reflect on their advantages and disadvantages.</p>
