Sustainable politics is connected to democratic decision-making procedures and to the integration of publics in these procedures. But in which ways are publics established in practice? This module is going to address this question. On the one hand, diverse theoretical and empirical approaches to the analysis of publics will be discussed. On the other hand, the influence of media on public processes will be evaluated. Subsequently, the question arises how publics are intertwined with sustainable practices of decision-making.		
Intended learning outcomes		
Students of this module will be given a general review of sustainable public practices. The acquired insights will be helpful to a deeper theoretical understanding of basic assumption of the sociology of the public. At the same time, they can be used as preliminaries to independent qualitative research. Finally, skills concerning the underlying claims of the sociology of media are going to be strengthened.
