## Contents

Using the example of plants, students will be introduced to the phylogenetic diversity of eukaryotes. At the level of groups in the plant kingdom, students will acquire the fundamental knowledge necessary to understand the forms and functions of plant organisms, with morphology and cytology being discussed in an evolutionary and ecological context.

### Intended learning outcomes

- Familiarity with the concepts of phylogenetic relationships between plants.
- Familiarity with the distinguishing characteristics and major representatives of groups in the plant kingdom.
- Ability to select those plant organisms that are most suitable for investigating particular scientific issues.
- Familiarity with the components and functioning of microscopes.
- Fundamental skills in the interpretation of macroscopic and histological preparations by light microscopy.
- Fundamental preparation skills.

### Method of assessment

- Written examination (approx. 60 minutes)

### Allocation of places

- (no information available)

### Additional information

- (no information available)

### Referred to in LPO I

- (examination regulations for teaching-degree programmes)

### Module appears in

- Bachelor’s degree (1 major) Mathematics (2014)
- Bachelor’s degree (1 major) Computational Mathematics (2014)
