Contents		
Comprising a lecture, an exercise and a seminar, this module discusses cloning and the expression of protein constructs for crystallisation. It teaches students the fundamental principles and techniques of crystallisation and crystal optimisation as well as crystallographic data collection.		
Intended learning outcomes		
Students have developed an understanding of the method of selecting protein constructs for crystallisation. They have learned the theoretical foundations of, as well as key skills and techniques for, protein crystallisation and data collection/processing. They are able to write up, reflect upon and discuss the results obtained.
