<b>Contents</b> This module introduces students to the rules of aromaticity and discusses specific reactions of aromatics. Using the example of carbonyl compounds, it extends the students' knowledge of substitution, elimination and additi
This module introduces students to the rules of aromaticity and discusses specific reactions of aromatics. Using the example of carbonyl compounds, it extends the students' knowledge of substitution, elimination and additi
the example of carbonyl compounds, it extends the students' knowledge of substitution, elimination and additi
well as rearrangement. In addition, it introduces students to the spectroscopic methods of infrared spectrosco- py, mass spectrometry and NMR spectroscopy.
Students have become familiar with the criteria for aromaticity. They can analyse the varying reactivity of car- bonyl compounds. They are able to describe specific reactions of carbonyls and aromatics. For that purpose, they can plan and formulate multi-stage syntheses with complex reaction mechanisms and can transfer them to unknown reactions. Students are able to describe important spectroscopic methods, to evaluate a spectrum an to draw conclusions regarding the molecular structure.
Courses (type, number of weekly contact hours, language — if other than German)
V + V + Ü (no information on SWS (weekly contact hours) and course language available)
<b>Method of assessment</b> (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus)
written examination (approx. 180 to 240 minutes) Language of assessment: German, English
Allocation of places
Additional information
Workload
Teaching cycle
<b>Referred to in LPO I</b> (examination regulations for teaching-degree programmes)
Module appears in
Bachelor's degree (1 major) Mathematics (2014) Bachelor's degree (1 major) Computational Mathematics (2014)

JMU Würzburg • generated 18.04.2025 • Module data record 118615
