### Contents

In many areas of computer science -- for example robotics, computer graphics, virtual reality and geographic information systems -- it is necessary to store, analyse, create or manipulate spatial data. This class is about the algorithmic aspects of these tasks: We will acquire techniques that are needed to plan and analyse geometric algorithms and data structures. Every technique will be illustrated with a problem in the practical areas listed above.

### Intended learning outcomes

The students are able to decide which algorithms or data structures are suitable for the solution of a given geometric problem. The students are able to analyse new problems and to come up with their own efficient solutions based on the concepts and techniques acquired in the lecture.

### Courses

<tr>
<td>V</td>
<td>(2) + Ü (2)</td>
</tr>
</tbody>
</table>

### Method of assessment

Did announced by the lecturer at the beginning of the course, the written examination may be replaced by an oral examination of one candidate each (approx. 20 minutes) or an oral examination in groups of 2 candidates (approx. 15 minutes per candidate).

Language of assessment: German and/or English creditable for bonus

### Allocation of places

---

### Additional information

Focuses available for students of the Master’s programme Informatik (Computer Science, 120 ECTS credits): AT, HCI, GE

### Workload

150 h

### Teaching cycle

---

### Referred to in LPO I (examination regulations for teaching-degree programmes)

---

### Module appears in
