**Module title**
Advanced Sensory Systems and Sensor Data Processing

**Abbreviation**
10-I=ASS-182-m01

**Module coordinator**
holder of the Chair of Computer Science XVII

**Module offered by**
Institute of Computer Science

**ECTS**
5

**Method of grading**
numerical grade

**Only after succ. compl. of module(s)**
--

**Duration**
1 semester

**Module level**
graduate

**Other prerequisites**
--

---

### Contents

Advanced automation systems need instrumentation concepts with proprioceptive and exteroceptive sensors. The sensors can be active or passive and may be enclosed into an embedded system. Only complex sensor systems and clever sensor data processing procedures ensure the tasks of satellite systems are performed in a reliable fashion. After discussing in detail state-of-the-art sensors and sensor systems, the course focuses on sensor data processing for in orbit and for planetary applications.

### Intended learning outcomes

Students will master modern sensor data acquisition systems with embedded processing and several advanced data processing concepts, like sensor data interpretation. Advanced state estimation methods will be discussed within localization and mapping and students will have to deal with linear, non-linear filters (Kalman filter, extended Kalman filter, Unscented Kalman Filter, Particle filter, etc.). Furthermore, students should be able to put novel research strands in this area like machine learning concepts into a scientific and technological perspective and should be aware about the advantages and disadvantages.

Module taught in: English

**Method of assessment**
written examination (approx. 90 to 120 minutes)
Language of assessment: English
creditable for bonus

**Allocation of places**
--

### Additional information

--

**Workload**
150 h

**Teaching cycle**
--

**Referred to in LPO I**
(examination regulations for teaching-degree programmes)
--

**Module appears in**
Master's degree (1 major) Satellite Technology (2018)
