Module title | Computer Science for Space Engineering | 10-I=CSSE1-182-m01

Module coordinator | holder of the Chair of Computer Science VII

Module offered by | Institute of Computer Science

ECTS | Method of grading | Only after succ. compl. of module(s)
5 | numerical grade | --

Duration | Module level | Other prerequisites
1 semester | graduate | --

Contents
The topics of this course cover the broad spectrum that is needed for programming satellite systems. This includes close-to hardware programming as well as high level topics such as virtual machines and concurrency. Algorithms and data structures form the frame, where the special topics of computer science for space engineering are taught.

Intended learning outcomes
In this lecture the students should learn advanced concepts of computer science. In addition to low-level programming and programming in C and C++, object oriented syntax and semantics of programming languages and efficient data structures are in focus of the course. In practical programming tasks/assignments within this module, students will be made familiar with virtual machines, such that they are enabled to set up their own virtual machine for a satellite system.

Courses
(V (2) + Ü (2))
Module taught in: English

Method of assessment
written examination (approx. 90 to 120 minutes)
Language of assessment: English
creditable for bonus

Allocation of places
--

Additional information
--

Workload
150 h

Teaching cycle
--

Referred to in LPO I (examination regulations for teaching-degree programmes)
--

Module appears in
Master’s degree (1 major) Satellite Technology (2018)
