### Module title

**Spacecraft System Analysis**

### Abbreviation

10-I=SSA-182-m01

### Module coordinator

holder of the Chair of Computer Science VII

### Module offered by

Institute of Computer Science

### ECTS

### Contents

Spacecraft system Analysis examines the design of spacecraft and launch vehicles, including the impacts of the atmosphere and the space environment on requirements and configurations. The principles and design aspects of the structure, propulsion, power, thermal, communication, and control subsystems are studied.

### Intended learning outcomes

Students gain a general understanding of orbital mechanics & parameters and the subsystems of a spacecraft. This course handles the most important subsystems individually as listed in the table of contents. At the end of the course students will learn to translate mission requirements into orbit and subsystem definitions. Thermal and Mechanical qualification including testing for space is additionally covered.

### Courses

**V (4) + Ü (2) + E (2)**

Module taught in: English

### Method of assessment

- written examination (approx. 90 to 120 minutes) and field trip report (4 to 8 pages)

Language of assessment: English

creditable for bonus

### Allocation of places

--

### Additional information

--

### Referred to in LPO I

(examination regulations for teaching-degree programmes)

--

### Module appears in

Master’s degree (1 major) Satellite Technology (2018)
