| Contents | | |
| Real numbers and completeness, basic topological notions, convergence and divergence of sequences and series, power series, Taylor series, fundamental calculus in one and several variables (including inverse and implicit function theorem); fundamental integral calculus in one variable (Riemann integral and improper integrals). | | |
| Intended learning outcomes | | |
| The student knows and masters the essential methods and notions of analysis. He/She is able to perform easy mathematical arguments and present them adequately in written and oral form. He/She is acquainted with the central proof methods and concepts in analysis, their analytic background and geometric interpretation. | | |
| Courses (type, number of weekly contact hours, language — if other than German) | | |
| This module comprises 3 module components. Information on courses will be listed separately for each module component. <ul style="list-style-type: none"> • 10-M-ANA-1-o82: V + Ü (no information on SWS (weekly contact hours) and course language available) • 10-M-ANA-2-o82: V + Ü (no information on SWS (weekly contact hours) and course language available) • 10-M-ANA-P-o82: M (no information on SWS (weekly contact hours) and course language available) | | |
| Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus) | | |
| Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments. | | |
