<b>Contents</b>		
<p><b>Algebra</b> (fundamental algebraic structures: groups, rings, fields; Galois theory) and either</p> <p><b>Differential Geometry</b> (curves in Euclidean spaces, curvature, Frenet equations, local classification, submanifolds in Euclidean spaces, in particular hypersurfaces, curvature of hypersurfaces, geodesics, isometries, main theorem on local surface theory, special classes of surfaces)</p> <p>or</p> <p><b>Projective Geometry</b> (projective and affine planes, theorem of Desargues, fundamental theorems for projective spaces, dualities and polarities of projective spaces).</p>		
<b>Intended learning outcomes</b>		
The student is acquainted with fundamental concepts and methods in algebra and geometry (differential geometry or projective geometry). He/She is able to relate these concepts with one another, and realises the advantages of thinking across the borders of different branches in mathematics.
