

Module coordinator Module offered by Managing Director of the Institute of Applied Physics Faculty of Physics and Astronomy ECTS Method of grading Only after succ. compl. of module(s) 6 numerical grade Duration Module level Other prerequisites must be met to qualify for admission to assessment. The lecturer will inform students about the respective details at the beginning of the course. Registration for the course will be considered a declaration of will to seek admission to assessment. The lecturer will inform students about their registration for assessment into effect. Students who meet all prerequisites will be admitted to assessment into effect. Students who meet all prerequisites will be admitted to assessment in the current or in the subsequent semesters. Contents Intended learning outcomes The students have knowledge of the fundamental properties, technologies, characterising methods and functions of nanostructures. Courses (type, number of weekly contact hours, language – if other than German) V + S (no information on SWS (weekly contact hours) and course language available) Method of assessment (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus)	Module title Abbreviation						
Managing Director of the Institute of Applied Physics Faculty of Physics and Astronomy ECTS Method of grading Only after succ. compl. of module(s) 6 numerical grade Duration Module level Other prerequisites 2 semester undergraduate Certain prerequisites must be met to qualify for admission to assessment. In the lecturer will inform students about the respective details at the beginning of the course. Registration for admission to assessment to ver the course of the semester, the lecturer will put their registration for assessment into effect. Students who meet all prerequisites will be admitted to assessment in the current or in the subsequent semesters. Contents Introduction to the principles of producing, characterising and applying nanostructures Intended learning outcomes Intended learning outcomes The students have knowledge of the fundamental properties, technologies, characterising methods and functions of nanostructures. Courses (type, number of weekly contact hours, language – if other than German) V + S (no information on SWS (weekly contact hours) and course language available) Method of gasessment (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus) Motation of places Only as part of pool of general key skills (ASQ): 15 places. Places	Introduction to Nanoscience 11-EIN-132-mo1						
Method of grading Only after succ. compl. of module(s) 6 numerical grade Duration Module level Other prerequisites 2 semester undergraduate Certain prerequisites must be met to qualify for admission to assessment. The lecturer will inform students about the respective details at the beginning of the course. Registration for the course will be considered a declaration of will to seek admission to assessment. If students have botained the qualification for admission to assessment over the course of the semester, the lecturer will put their registration for assessment into effect. Students who meet all prerequisites will be admitted to assessment in the current or in the subsequent semesters. Contents Introduction to the principles of producing, characterising and applying nanostructures Intended learning outcomes Courses (type, number of weekly contact hours, language – if other than German) V + S (no information on SWS (weekly contact hours) and course language available) Method of assessment (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus)	Module coordinator				Module offered by
