

## Module description

Module coordinator chairperson of examination committee  ECTS Method of grading numerical grade  Duration Module level 1 semester 1 semester 1 graduate  Approval from examination committee required.  Contents  Current topics of Experimental and Theoretical Physics. Accredited academic achievements, e.g. in case of change of university or study abroad.  Intended learning outcomes  The students have advanced competencies corresponding to the requirements of a module of Experimental or Theoretical Physics of the Master's programme of Nanostructure Technology. They have knowledge of a current subdiscipline of Physics and understand the measuring and/or calculation methods necessary to acquire this knowledge. They are able to classify the subject-specific contexts and know the application areas.  Courses (type, number of weekly contact hours, language — if other than German)  V (4) R (2)  Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)  written examination (approx. 90 to 120 minutes) or oral examination of one candidate each (approx. 30 minutes or oral examination in groups (groups of 2, approx. 30 minutes) per candidate) or project report (approx. 8 to 10 pages) or presentation/talk (approx. 30 minutes). If a written examination was chosen as method of assessment, this may be changed and assessment may instead take the form of an oral examination of one candidate each or an oral examination in groups. If the method of assessment is changed, the lecturer must inform students about this by four weeks prior to the original examination of a places	Module title					Abbreviation
