## Contents
The module introduces teaching practice. The students gain insights into the pedagogical, didactic and methodical practice of Physics by observing and discussing classes. They consolidate their knowledge by preparing and holding classes themselves. In the corresponding seminar, the following topics (among others) will be discussed in agreement with the teachers: Introduction to the curriculum of Hauptschule; criteria to observe and analyse classes; basics of general school and class pedagogics; subject-specific work methods; planning of class sequences and models; introduction to the usage of modern media; development of blackboard pictures and transparency sketches. The main focus will be on class practice, the corresponding seminar also helps the students in developing own classes.

## Intended learning outcomes
The students have gained deep insights into the main steps of planning, preparing and organising classes; they are able to implement the contents of the curricula for different grades in a practical manner; they are able to select and use media, methods and social forms according to learning goals; they are able to connect findings of school pedagogics and learning psychology with subject-didactic knowledge and to integrate these findings into the organisation of classes.
