Module description

Module coordinator Module offered by Managing Director of the Institute of Theoretical Physics Faculty of Physics and Astronomy ECTS Method of grading Only after succ. compl. of module(s) 4 numerical grade - Duration Module level Other prerequisites must be met to qualify for admission to as- sessment. The lecturer will inform students about the respective details at the beginning of the course. Registration for the course will be con- sidered a declaration of will to seek admission to assessment over the course of the semester, the lecture will put heir registration for as- sessment at later date, students will be uther regulation for as- sessment into effect. Students who meet all prerequisites will be admit- ted to assessment in the current or in the subsequent semester. For as- sessment at later date, students will have to obtain the qualification for admission to assessment anew. Contents Intended learning outcomes The students know the current state of research on the modern topic of Astrophysics. They know the physical va- ubes and are to plan and conduct observations in this area. This includes the ability to conceptualise a specific observation all project and e.g. to apply for observation time at large telescopes. Courses (vpe, number of weekly contact hours, language – if other than Geman) V + R (no information on SWS (weekly contact hours) and course language available)	Module title Abbreviation						
Managing Director of the Institute of Theoretical Physics Faculty of Physics and Astronomy Bethod of grading Only after succ. compl. of module(s) 4 numerical grade Duration Module level Other prerequisites must be met to qualify for admission to as- sessment. The lecturer will inform students about the respective details at the beginning of the course. Registration for the course will be con- sidered a declaration of will to seek admission to assessment over the course of the semester, the lecturer will inform beneating the admit- ted to assessment into effect. Students who meet all prequisites will be admit- ted to assessment into effect. Students who meet all prequisites will be admit- ted to assessment into effect. Students who meet all prequisites will be admit- ted to assessment into effect. Students who meet all prequisites will be admit- ted to assessment at a later date, students will have to obtain the qualification for admission to assessment and enduce to be admited to assessment and admited to assessment and enduce obtain the qualification for admission to assessment and enduce obtain the qualification for admission to assessment and enduce obtain the subsequent semester. For as- sessment and a later date, students will have to obtain the qualification for admission to a field of modern Astrophysics, e.g. extra-galactic jets. Intended learning outcomes The students know the current state of research on the modern topic of Astrophysics. They know the physical va- lues and are to plan and conduct observations in this area. This includes the ability to conceptualise a specific observational project and e.g. to apply for observation and engage available) Method of assessment of weakly contact hours,	Modern Astrophysics					11-MAS-111-m01
