<td>Only after succ. compl. of module(s)</td>
<td>Certain prerequisites must be met to qualify for admission to assessment. The lecturer will inform students about the respective details at the beginning of the course. Registration for the course will be considered a declaration of will to seek admission to assessment. If students have obtained the qualification for admission to assessment over the course of the semester, the lecturer will put their registration for assessment into effect. Students who meet all prerequisites will be admitted to assessment in the current or in the subsequent semester. For assessment at a later date, students will have to obtain the qualification for admission to assessment anew.</td>
</tr>
</tbody>
</table>

### Duration
1 semester

### Module level
undergraduate

### Contents
Physical material properties, growth and coating procedures, methods of characterisation and structuring technologies.

### Intended learning outcomes
The students have knowledge of the practical basics of material characterisation and physical technology for material synthesis.

### Courses
P (no information on SWS (weekly contact hours) and course language available)

### Method of assessment
Preparing the experiment will be considered successfully completed if an oral test (duration: approx. 15 minutes) prior to the experiment is passed. Performing and evaluating the experiment will be considered successfully completed if a Testat (exam) is passed. An experiment log (approx. 8 pages) is to be prepared. Each component of the assessment can be repeated once in the respective semester. Only if both components of the assessment have been successfully completed in the same semester will the module component be considered successfully completed.

Assessment offered: once a year, winter semester

### Allocation of places
--

### Additional information
--

### Referred to in LPO I
(examination regulations for teaching-degree programmes)

### Module appears in

- Bachelor’ degree (1 major) Nanostructure Technology (2010)
- Bachelor’ degree (1 major) Nanostructure Technology (2012)
- Bachelor’ degree (1 major) Functional Materials (2012)
