| 1 semester  |         | undergraduate                 |                              |                                  |                 |  |
| Contents  |         |                               |                              |                                  |                 |  |
| ons, mechanical gauge transformation; symmetries, Noether theorem, cyclic coordinates; accelerated reference systems and apparent forces; 3. Hamiltonian formulation: Legendre transformation, phase space; Hamilton function, canonical equations; Poisson brackets, canonical transformations; generator of symmetries, conservation laws; minimal coupling; Liouville theorem; Hamilton-Jacobi formulation [optional]; 4. Applications: Central-force problems; mechanical similarity, Virial theorem; minor vibrations; particles in an electromagnetic field; rigid bodies, torque and inertia tensor, centrifugal and Euler equations [optional]; scattering, cross section [optional]; 5. Relativistic dynamics: Lorentz Transformation; Minkowski space; equations of motion; 6. Non-linear dynamics: Stability theory; KAM theory [optional]; deterministic chaos [optional] |         |                               |                              |                                  |                 |  |
| Intended learning outcomes  |         |                               |                              |                                  |                 |  |
| The students have gained first experiences concerning the working methods of Theoretical Physics. They are familiar with the principles of theoretical mechanics and their different formulations. They are able to independently apply the acquired mathematical methods and techniques to simple problems of Theoretical Physics and to interpret the results. They have especially acquired knowledge of basic mathematical concepts.  |         |                               |                              |                                  |                 |  |
| Courses (type, number of weekly contact hours, language — if other than German)   |         |                               |                              |                                  |                 |  |
| V (4)   |         |                               |                              |                                  |                 |  |
| <b>Method of assessment</b> (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)  |         |                               |                              |                                  |                 |  |
| written examination (approx. 120 minutes) Language of assessment: German and/or English   |         |                               |                              |                                  |                 |  |
| Allocation of places  |         |                               |                              |                                  |                 |  |
|   |         |                               |                              |                                  |                 |  |
