<b>Contents</b>		
<p>Students will complete their degree with a Bachelor's thesis in which they will be required to research and write on a topic from the area of business management and economics. This thesis may either take the form of an analysis and structured presentation of the existing literature on a certain topic or may, as is often the case, also include a presentation of the students' own original achievements, e. g. new algorithms developed by students, surveys, the prototypical demonstration of a concept or the application and (further) development of a theoretical model.</p>		
<b>Intended learning outcomes</b>		
<p>In the thesis, students demonstrate that they are able to plan and to carry out a science-based research within a prescribed period and to document the results in accordance with the professional scientific standards in writing. The acquisition of specialized skills presupposes the reception of national and international (mainly English) literature. Students are able to understand relevant contributions to research and professional practice and to critically analyze and assess their relevance to their own specific questions. They can recognize and assess major lines of development and dynamics within the field of study.</p>
