<b>Contents</b>		
<p>The course provides a basic understanding of the driving forces behind business cycles and growth processes and discusses approaches for a sensible economic policy. After a brief introduction to national accounts, the short and medium-term effects of fiscal and monetary policies on goods and money markets in closed as well as open economies are discussed. In this context, the volatility of macroeconomic variables such as GDP, interest rates, inflation and unemployment are analysed in the economic cycle. In addition, the determinants of long-term economic growth and causes of international differences in living standards are examined. Here, the course will focus on recent developments such as monetary and fiscal policy in the euro area.</p>
