<b>Contents</b>		
<p>Blackboards are still the classic medium for teaching classes. The students examine the theoretical principles of working with boards to determine the possibilities and opportunities of using interactive board systems. The module provides an overview of the functionality of interactive whiteboards which combine the functions of blackboards with the functions of flip charts by using computer technology as well as projection technology. Self-organised learning processes, which are demanded by modern learning culture, are put into practice. In this way, the students actively participate in class and work with the board systems from the beginning of the seminar.</p>		
<b>Intended learning outcomes</b>		
<p>After successfully completing this module, the students have acquired basic skills in dealing with interactive whiteboards. By creating virtual arrangements, the students have learned to create content for interactive whiteboards and they are able to integrate these whiteboards into school lessons in a useful manner. Furthermore, they know how to search for additional digital resources and materials for teaching school lessons with an interactive whiteboard.</p>
