Bachelor's with 1 major Chemistry (2008)	JMU Würzburg • generated 11-Jan-2023 • exam. reg.	page 3 / 42
	data record Bachelor (180 ECTS) Chemie - 2008	

Content and Objectives of the Programme

The Bachelor of Chemistry acquaints graduates with the basics of Chemistry, important experimental techniques and methods of scientific work. It is a research-oriented course.

Contents of Chemistry, Mathematics and Physics are thought in lectures and exercises. Typical for this course is a large number of practical courses which provide experimental techniques for scientific laboratory work. Subsequently the Bachelor's thesis demonstrates the graduates knowledge and skills in finding solutions for specific chemical questions.

Students are thus able to participate on a Master degree course. They also have acquired basic theoretical concepts for several tasks as well as professional further development.

Bachelor's with 1 major Chemistry (2008)	JMU Würzburg • generated 11-Jan-2023 • exam. reg.	page 4 / 42
	data record Bachelor (180 ECTS) Chemie - 2008	

Abbreviations used

Course types: \mathbf{E} = field trip, \mathbf{K} = colloquium, \mathbf{O} = conversatorium, \mathbf{P} = placement/lab course, \mathbf{R} = project, \mathbf{S} = seminar, \mathbf{T} = tutorial, $\ddot{\mathbf{U}}$ = exercise, \mathbf{V} = lecture

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B/NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programmes), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: **A** = thesis, **LV** = course(s), **PL** = assessment(s), **TN** = participants, **VL** = prerequisite(s)

Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

In accordance with

the general regulations governing the degree subject described in this module catalogue:

ASP02007

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

17-Nov-2009 (2008-34)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

				, .	stances, biopolymers and protec- ith special hazardous substan-

ting group techniques. Students enhance their experimental skills by working with special hazardous substances, using complicated working and synthesis techniques as well as extensive purification methods and performing elaborate product analyses.

Intended learning outcomes

Students are able to name important heteroaromatics and to formulate their reactions and syntheses. They are able to characterise and categorise dyes. Students are able to describe the structure and selective synthesis of proteins. In addition, they are able to describe the structure of the DNA, carbohydrates, fats, terpenes and steroids. Students know how to safely and responsibly handle special hazardous substances. They are able to perform complex syntheses, purification methods and product analyses. They are able to use specialist literature to plan experiments.

Courses (type, number of weekly contact hours, language – if other than German)

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 08-0C4-1-072: V + Ü (no information on SWS (weekly contact hours) and course language available)
- 08-0C4-2-072: P (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component o8-OC4-1-072: Organic Chemistry 4 Organic Chemistry 4

- 5 ECTS, Method of grading: numerical grade
- written examination (90 minutes)
- Other prerequisites: Registration for assessment: Yes, as specified.

Assessment in module component o8-OC4-2-072: Organic Chemistry - advanced laboratory course for students of chemistry

- 5 ECTS, Method of grading: (not) successfully completed
- Vortestate (pre-experiment exams, approx. 15 minutes each), assessment of practical performance, Nachtestate (post-experiment exams, approx. 15 minutes each)
- Assessment offered: once a year, winter semester

	Contents					
les, me module exercis autono ques, t	This module provides students with an overview of the fundamental principles of chemistry. It focuses on partic- les, metals, acid-base reactions, the periodic table, chemical equilibrium and complexometry. In addition, the module introduces fundamental models of chemistry and principles of inorganic chemistry. It includes practical exercises based on the lecture on experimental chemistry and its extension. After a safety briefing, the students autonomously conduct experiments in the laboratory. The course focuses on laboratory safety, simple lab techni- ques, the synthesis of simple substances and analyses of unknown substances. In addition, students have the opportunity to advance their laboratory knowledge.					
		ning outcomes	iy knowledge.			
mical fe are able are able loped t approp Course This mo compo • 0 • 0	 Students are able to explain the principles of the periodic table and to extract information from it. They are able to explain basic models of the structure of matter. They have developed the ability to use the language of chemical formulas to describe chemical reactions and to interpret them by identifying the type of reaction. Students are able to describe the main quantitative and qualitative analytical methods and their application areas. They are able to identify fundamental problems in chemistry and perform experiments to solve them. They have developed the ability to perform the necessary stoichiometric calculations and describe the chemical processes in an appropriate manner, both in written and oral form. Courses (type, number of weekly contact hours, language – if other than German) This module comprises 3 module components. Information on courses will be listed separately for each module component. o8-AC1-1-072: V + V + Ü (no information on SWS (weekly contact hours) and course language available) o8-AC1-2-072: P (no information on SWS (weekly contact hours) and course language available) 					
Metho	d of ass	3-082: V (no informatior essment (type, scope, langu le for bonus)				
Assess low. Ur	module is creditable for bonus) Assessment in this module comprises the assessments in the individual module components as specified be- low. Unless stated otherwise, successful completion of the module will require successful completion of all indi- vidual assessments.					
 Assessment in module component o8-AC1-1-072: Principles of Inorganic Chemistry Principles of Inorganic Chemistry 10 ECTS, Method of grading: numerical grade a) 1 to 3 written examinations (1 written examination: 90 minutes; 2 written examinations: 60 or 90 minutes each; 3 written examinations: 60 minutes each) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups (groups of 2, approx. 30 minutes) Assessment in module component o8-AC1-2-072: Inorganic Chemistry 1 (lab) 7 ECTS, Method of grading: (not) successfully completed Vortestate (pre-experiment exams, approx. 15 minutes each), assessment of practical performance, Nachtestate (post-experiment exams, approx. 15 minutes each) Assessment in module component o8-AC1-3-o82: Inorganic Chemistry 1 (lab accompanying lecture) 4 ECTS, Method of grading: numerical grade 3 written examinations (45 minutes each), weighted 1:1:1, dates to be announced

Content	ts						
This module equips students with an advanced knowledge of the periodic table and selected elements. It focu- ses on bonding conditions, trends in the periodic table and the description and structure of elements. In additi- on, it introduces students to elementary organic chemistry, coordination chemistry and complex chemistry. The module gives students the opportunity to apply in practice the knowledge they have gained through the related lecture(s). After a safety briefing, the students autonomously conduct experiments in the laboratory. These expe- riments focus on different methods for the analysis of unknown substances.						ts.
