Module Catalogue
for the Subject
Mathematics
as a Bachelor’s with 1 major
with the degree "Bachelor of Science"
(180 ECTS credits)

Examination regulations version: 2007
Responsible: Institute of Mathematics
Contents

The subject is divided into

Content and Objectives of the Programme 6
Abbreviations used, Conventions, Notes, In accordance with 7

Compulsory Courses

Analysis 10
Linear Algebra 12
Advanced Analysis 14
Algebra, Geometry and Number Theory 15
Ordinary Differential Equations and Complex Analysis 17
Numerical Mathematics 1 19
Stochastics 1 20

Compulsory Electives

Mathematics 1
Numerical Mathematics 2 23
Stochastics 2 24
Mathematics 2
Introduction to Discrete Mathematics 26
Introduction to Functional Analysis 27
Operations Research 28
Non-Linear Dynamics 29
Mathematics 3
Reading Course Numerical Mathematics 31
Reading Course Stochastics 32
Reading Course Discrete Mathematics 33
Reading Course Functional Analysis 34
Reading Course Operations Research 35
Reading Course Dynamical Systems 36
Reading Course Optimisation 37
Mathematics 4
Seminar in Analysis 39
Seminar in Linear Algebra 40
Seminar in Algebra 41
Seminar in Geometry 42
Seminar in Number Theory 43
Seminar in Ordinary Differential Equations 44
Seminar in Complex Analysis 45
Seminar in Numerical Mathematics 46
Seminar in Stochastics 47
Seminar in Functional Analysis 48
Seminar in Operation Research 49
Seminar in Discrete Mathematics 50

Application-oriented Subject

Application-oriented Subject Biology

Application-oriented Subject Biology Compulsory Courses

Genetics, Neurobiology, Behaviour 54
Structure and Function of Cells 56

Application-oriented Subject Biology Compulsory Electives

Bioinformatics 58
Ecology of plants and animals 59
Developmental Biology for advanced students 60
Cell Biology for advanced students 61
Microbiology for advanced students 62
Bioinformatics for advanced students 63
Biotechnology I 64
Neurobiology for advanced students 65
Behavioural physiology and sociobiology for advanced students 66
Ecology of Animals for advanced students 67
Specific Plant Physiology 68
Biophysics - Basic course 69
Biochemistry - Basic course 70
Basics plant Ecophysiology 71
Pharmaceutical bio analytics 72
Human Genetics 73
Immunology I 74
Physiological Chemistry I 75
Virology I 76
Advanced Light- and Electron-Microscopy 77
Analysis of Chromosomes 78
Ecology and Developmental Biology of marine organisms 79
Methods in Biotechnology 81
Aspects of modern Biotechnology 82
Special Bioinformatics I 83
Neurobiology I 84
Aspects of Integrative Behavioural Biology 85
Fuctional Morphology of arthropods 86
Ecology of insects 88
Ecology of populations 89
Molecular modelling - From DNA to protein 90
Introduction Methods in Plant Ecophysiology 91
Pharmaceutical Drugs 92
Methods Pharmaceutical Biology - practical course 93
Neurobiology II 94
Integrative Behavioural Biology II 95
Ecology of animals II 96
Methods in molecular cell - and developmental Biology 97
Specific Microbiology II 99
Specific Bioinformatics II 100
Specific Biotechnology II 101
Physiology of membrane transport mechanisms 102
Molekular biology of plants 103
Protein biochemistry and expression of recombinant proteins 104
Specific ecophysiology of plants 105
Molecular biological methods in pharmaceutical biology 106
Biochemical methods in pharmaceutical Biology 107
Immunology II 108
Virology II 109
Physiological Chemistry II 110
External Practical Course 111
Practical Course as exchange student 112
Evolution - Basics and Principles (Lecture and Practice) 113
The Animal Kingdom 114
The Plant Kingdom 115
Genetics 116
Biochemistry 117

Application-oriented Subject Chemistry

Application-oriented Subject Chemistry Compulsory Courses 119
Organic Chemistry I 120
Principles of quantum mechanics and spectroscopy 121

Content and Objectives of the Programme

No translation available.
Abbreviations used

Term: \textit{SS} = summer semester, \textit{WS} = winter semester

Methods of grading: \textit{NUM} = numerical grade, \textit{B/NB} = (not) successfully completed

Regulations: \textit{(L)ASPO} = general academic and examination regulations (for teaching-degree programmes), \textit{FSB} = subject-specific provisions, \textit{SFB} = list of modules

Other: \textit{A} = thesis, \textit{LV} = course(s), \textit{PL} = assessment(s), \textit{TN} = participants, \textit{VL} = prerequisite(s)

Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

In accordance with

the general regulations governing the degree subject described in this module catalogue:

\textit{ASPO2007}

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

\textit{9-Dec-2008 (2008-31)}

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

### Contents

Real numbers and completeness, basic topological notions, convergence and divergence of sequences and series, power series, Taylor series, fundamental calculus in one and several variables (including inverse and implicit function theorem); fundamental integral calculus in one variable (Riemann integral and improper integrals).

### Intended learning outcomes

The student knows and masters the essential methods and notions of analysis. He/She is able to perform easy mathematical arguments and present them adequately in written and oral form. He/She is acquainted with the central proof methods and concepts in analysis, their analytic background and geometric interpretation.

### Courses

This module comprises 3 module components. Information on courses will be listed separately for each module component.

- **10-M-ANA-1-072**: Analysis 1 Analysis 1
  - 8 ECTS, Method of grading: (not) successfully completed
  - a) written examination (approx. 90 minutes; usually chosen) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups (groups of 2, approx. 30 minutes)
  - Language of assessment: German, English if agreed upon with the examiner
  - Other prerequisites: Modules 10-M-VKM and 10-M-PPM are recommended.

- **10-M-ANA-2-072**: Analysis 2 Analysis 2
  - 8 ECTS, Method of grading: (not) successfully completed
  - a) written examination (approx. 90 minutes; usually chosen) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups (groups of 2, approx. 30 minutes)
  - Language of assessment: German, English if agreed upon with the examiner
  - Other prerequisites: Modules 10-M-VKM and 10-M-PPM are recommended; in addition, module component 10-M-ANA-1 is recommended for module component 10-M-ANA-2.

- **10-M-ANA-P-072**: Examination in Analysis
  - 2 ECTS, Method of grading: numerical grade
  - oral examination of one candidate each (approx. 30 minutes)
  - Language of assessment: German, English if agreed upon with the examiner
  - Only after successful completion of module components: 10-M-ANA-1 or 10-M-ANL-1 or 10-M-ANA-2 or 10-M-ANL-2
  - Other prerequisites: Modules 10-M-VKM and 10-M-PPM are recommended.
### Allocation of places

**Referred to in LPO I** (examination regulations for teaching-degree programmes)

--
Module title: Linear Algebra
Abbreviation: 10-M-LNA-072-m01

Module coordinator:
Dean of Studies Mathematik (Mathematics)

Module offered by:
Institute of Mathematics

ECTS: 18
Method of grading: numerical grade
Only after succ. compl. of module(s)

Duration: 2 semester
Module level: undergraduate
Other prerequisites: By way of exception, additional prerequisites are listed in the section on assessments.

Contents:
Sets, relations and maps; notions of groups, rings and fields (in particular, polynomial rings); vector spaces (subspaces, quotient spaces, linear independency, basis, dimension); linear maps (isomorphism theorem, image, kernel, rank); matrix calculus; systems of linear equations, determinants, eigenvalues, eigenvectors and eigenspaces, diagonalisability (including characteristic polynomial, minimal polynomial), normal forms, bilinear forms; Euclidean and unitary vector spaces (orthonormal bases, isometries, principal axis transformation).

Intended learning outcomes:
The student knows and masters the basic notions and essential methods of linear algebra. He/She is able to perform easy mathematical arguments independently, and can present them adequately in written and oral form. He/She is able to apply the central proof methods and concepts of linear algebra and knows about their algebraic and geometric background.

Courses:
This module comprises 3 module components. Information on courses will be listed separately for each module component.

- 10-M-LNA-1-072: V + Ü (no information on SWS (weekly contact hours) and course language available)
- 10-M-LNA-2-072: V + Ü (no information on SWS (weekly contact hours) and course language available)
- 10-M-LNA-P-072: M (no information on SWS (weekly contact hours) and course language available)

Method of assessment:
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component 10-M-LNA-1-072: Linear Algebra 1 Linear Algebra 1
- 8 ECTS, Method of grading: (not) successfully completed
  a) written examination (approx. 90 minutes; usually chosen) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups (groups of 2, approx. 30 minutes)
- Language of assessment: German, English if agreed upon with the examiner
- Other prerequisites: Module 10-M-VKM is recommended.

Assessment in module component 10-M-LNA-2-072: Linear Algebra 2 Linear Algebra 2
- 8 ECTS, Method of grading: (not) successfully completed
  a) written examination (approx. 90 minutes; usually chosen) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups (groups of 2, approx. 30 minutes)
- Language of assessment: German, English if agreed upon with the examiner
- Other prerequisites: Module 10-M-VKM is recommended in addition, module component 10-M-LNA-1 is recommended for module component 10-M-LNA-2.

Assessment in module component 10-M-LNA-P-072: Examination in Linear Algebra
- 2 ECTS, Method of grading: numerical grade
  oral examination of one candidate each (approx. 30 minutes)
- Language of assessment: German, English if agreed upon with the examiner
- Only after successful completion of module components: 10-M-LNA-1 or 10-M-LNA-2
- Other prerequisites: Module 10-M-VKM is recommended.

### Duration

1 semester

### Module level

undergraduate

### Other prerequisites

--

### Contents

Lebesgue integral in several variables, including theorems on convergence and Fubini’s theorem, $L^p$-spaces and elementary Fourier theory in $L^2$, Gauss’s theorem.

### Intended learning outcomes

The student is acquainted with advanced topics in analysis. Taking the example of the Lesbegue integral, he or she is able to understand the construction of a complex mathematical concept.

### Courses

(V + Ü (no information on SWS (weekly contact hours) and course language available)

### Method of assessment

a) written examination (approx. 90 minutes; usually chosen) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups (groups of 2, approx. 30 minutes)

Module title | Abbreviation
---|---
Algebra, Geometry and Number Theory | 10-M-AGZ-072-m01

Module coordinator | Module offered by
Dean of Studies Mathematik (Mathematics) | Institute of Mathematics

ECTS | Method of grading | Only after succ. compl. of module(s)
---|---|---
22 | numerical grade | ---

Duration | Module level | Other prerequisites
---|---|---
3 semester | undergraduate | By way of exception, additional prerequisites are listed in the section on assessments.

Contents

Introduction to algebra, number theory and geometry: basic algebraic structures (groups, rings, fields); arithmetic properties of integers and rational numbers (as well as algebraic extensions) relating to their algebraic structures (residue class rings and finite fields) and their geometry (quadratic forms); axiomatic introduction of projective spaces, coordinates, fundamental theorems, relations to linear algebra and algebra, curves and hypersurfaces in Euclidean spaces, curvature.

Intended learning outcomes

The student is acquainted with the fundamental concepts and methods in algebra, geometry and number theory. He/She is able to relate these concepts with one another, and realises the advantages of thinking across the borders of different branches in mathematics.

Courses (type, number of weekly contact hours, language — if other than German)

This module has 4 components; information on courses listed separately for each component.
- 10-M-AGZ-1-072: V + Ü (no information on language and number of weekly contact hours available)
- 10-M-AGZ-2-072: V + Ü + V + Ü (no information on language and number of weekly contact hours available)
- 10-M-AGZ-3-072: V + Ü (no information on language and number of weekly contact hours available)
- 10-M-AGZ-P-072: M (no information on language and number of weekly contact hours available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

This module has the following 4 assessment components. Unless stated otherwise, students must pass all of these assessment components to pass the module as a whole.

Assessment in module component 10-M-AGZ-1-072: Einführung in die Algebra (Introduction to Algebra)
- 7 ECTS credits, pass / fail
  - a) written examination (approx. 90 minutes, usually chosen) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups of 2 candidates (approx. 30 minutes)
- Language of assessment: German; English if agreed upon with examiner(s)
- Additional prerequisites: Module 10-M-LNA recommended.

Assessment in module component 10-M-AGZ-2-072: Einführung in die Geometrie (Introduction to Geometry)
- 8 ECTS credits, pass / fail
  - a) written examination (approx. 90 minutes, usually chosen) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups of 2 candidates (approx. 30 minutes)
- Language of assessment: German; English if agreed upon with examiner(s)
- Additional prerequisites: Module 10-M-LNA recommended.

Assessment in module component 10-M-AGZ-3-072: Elementare Zahlentheorie (Elementary Number Theory)
- 5 ECTS credits, pass / fail
  - a) written examination (approx. 90 minutes, usually chosen) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups of 2 candidates (approx. 30 minutes)
- Language of assessment: German; English if agreed upon with examiner(s)
- Additional prerequisites: Module 10-M-LNA recommended.

Assessment in module component 10-M-AGZ-P-072: Prüfung Algebra, Geometrie und Zahlentheorie (Assessment Algebra, Geometry and Number Theory)
- 2 ECTS credits, numerical grading
• oral examination of one candidate each (approx. 30 minutes)
• Language of assessment: German; English if agreed upon with examiner(s)
• Only after successful completion of module components: Two out of the following three module components: 10-M-AGZ-1, 10-M-AGZ-2, 10-M-AGZ-3.
• Additional prerequisites: Module 10-M-LNA recommended.

Allocation of places

Additional information

Referred to in LPO I (examination regulations for teaching-degree programmes)
Module title: Ordinary Differential Equations and Complex Analysis
Abbreviation: 10-M-DFT-072-m01

Module coordinator: Dean of Studies Mathematik (Mathematics)
Module offered by: Institute of Mathematics

ECTS: 14
Method of grading: Only after succ. compl. of module(s)
Numerical grade: --

Duration: 2 semester
Module level: undergraduate
Other prerequisites: --

Contents:
Existence and uniqueness theorems on solutions of ordinary differential equations, solution theorems on systems of linear differential equations, introduction to the problem of systems of nonlinear differential equations, basic notions in the qualitative theory of ordinary differential equations, basic properties of holomorphic functions, meromorphic functions and conformal maps, basic proof methods in differential equations and complex analysis, applications in computer science, physics, engineering science and other fields of mathematics.

Intended learning outcomes:
The student is acquainted with the fundamental concepts and methods of the theory of ordinary differential equations and holomorphic functions. He/she is able to interconnect these concepts and realises the advantages of thinking across the borders of different branches in mathematics.

Courses:
This module comprises 3 module components. Information on courses will be listed separately for each module component.

- 10-M-DFT-1-072: V + Ü (no information on SWS (weekly contact hours) and course language available)
- 10-M-DFT-2-072: V + Ü (no information on SWS (weekly contact hours) and course language available)
- 10-M-DFT-P-072: M (no information on SWS (weekly contact hours) and course language available)

Method of assessment:
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component 10-M-DFT-1-072: Ordinary Differential Equations
- 5 ECTS, Method of grading: (not) successfully completed
  - a) written examination (approx. 90 minutes; usually chosen) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups (groups of 2, approx. 30 minutes)
  - Language of assessment: German, English if agreed upon with the examiner

Assessment in module component 10-M-DFT-2-072: Introduction to Complex Analysis
- 7 ECTS, Method of grading: (not) successfully completed
  - a) written examination (approx. 90 minutes; usually chosen) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups (groups of 2, approx. 30 minutes)
  - Language of assessment: German, English if agreed upon with the examiner

Assessment in module component 10-M-DFT-P-072: Examination in Ordinary Differential Equations and Complex Analysis
- 2 ECTS, Method of grading: numerical grade
  - oral examination of one candidate each (approx. 30 minutes)
  - Language of assessment: German, English if agreed upon with the examiner
  - Only after successful completion of module components: 10-M-DFT-1 or 10-M-DFT-2

Allocation of places:

**Contents**

Solution of systems of linear equations and curve fitting problems, nonlinear equations and systems of equations, interpolation with polynomials, splines and trigonometric functions, numerical integration.

**Intended learning outcomes**

The student is acquainted with the fundamental concepts and methods in numerical mathematics, applies them to practical problems and knows about their typical fields of application.

**Courses** (type, number of weekly contact hours, language — if other than German)

V + Ü (no information on SWS (weekly contact hours) and course language available)

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

- a) written examination (90 minutes; usually chosen) or b) oral examination of one candidate each (20 minutes) or c) oral examination in groups (groups of 2, 30 minutes)

Contents
Basics in optimization.

Intended learning outcomes
The student is able to work independently on a given scientific topic. He or she can tackle a simple mathematical text and can use standard literature.

Courses (type, number of weekly contact hours, language — if other than German)
A (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

a) talk (approx. 30 minutes) or b) written elaboration (approx. 5 to 10 pages)

Application-oriented Subject
(35 ECTS credits)
Application-oriented Subject Biology
(35 ECTS credits)
Application-oriented Subject Biology Compulsory Courses
(10 ECTS credits)
### Module title
Genetics, Neurobiology, Behaviour

### Abbreviation
07-2A2GNV-072-m01

### Module coordinator
Dean of Studies Biologie (Biology)

### Module offered by
Faculty of Biology

### ECTS
6

### Method of grading
numerical grade

### Duration
1 semester

### Module level
undergraduate

### Other prerequisites
By way of exception, additional prerequisites are listed in the section on assessments.

### Contents
Fundamental principles of genetics, neurobiology and behavioural biology.

### Intended learning outcomes
[Version 1: Students will understand that there are molecular, cellular and system biological mechanisms and processes involved in animal behaviour and will be able to relate animal behaviour to the molecular and formal bases of inheritance.] [Version 2: Students will understand that there are molecular, cellular and system biological mechanisms and processes involved in animal behaviour and will be able to relate animal behaviour to the molecular and formal bases of inheritance.]

### Courses
This module comprises 3 module components. Information on courses will be listed separately for each module component.

- **07-2A2GNV-1G-072**: V + Ü (no information on SWS (weekly contact hours) and course language available)
- **07-2A2GNV-2N-072**: V + Ü (no information on SWS (weekly contact hours) and course language available)
- **07-2A2GNV-3V-072**: V + Ü (no information on SWS (weekly contact hours) and course language available)

### Method of assessment
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 07-2A2GNV-1G-072**: Basic Genetics

- 2 ECTS, Method of grading: numerical grade
- written examination (approx. 30 minutes)
- Other prerequisites: Admission prerequisite to assessment: regular attendance of exercises and successful completion of the respective exercises as specified at the beginning of the course.

**Assessment in module component 07-2A2GNV-2N-072**: Basic Neurobiology

- 2 ECTS, Method of grading: numerical grade
- written examination (approx. 30 minutes)
- Other prerequisites: Admission prerequisite to assessment: regular attendance of exercises and successful completion of the respective exercises as specified at the beginning of the course.

**Assessment in module component 07-2A2GNV-3V-072**: Behavioural Biology

- 2 ECTS, Method of grading: numerical grade
- written examination (approx. 30 minutes, word problems and/or multiple choice questions)
- Other prerequisites: Admission prerequisite to assessment: regular attendance of exercises and successful completion of the respective exercises as specified at the beginning of the course.

### Allocation of places
Only as part of "spezielles Studienangebot": 10 places.

### Additional information
--
Referred to in LPO I (examination regulations for teaching-degree programmes)

--
### Module title
Structure and Function of Cells

### Contents

[Version 1: This module will discuss the cell, the smallest unit of life, starting with its macroscopic structure before moving on to its microscopic structure. It will point out differences and similarities between prokaryotic cells (bacteria, archaea) and eukaryotic cells (animals, plants).] [Version 2: The first part of the module will acquaint students with the elementary building blocks of life as well as biological categories. Building on this knowledge, the course will then discuss the cell, the smallest unit of life, starting with its macroscopic structure before moving on to its microscopic structure. It will point out differences and similarities between prokaryotic cells (bacteria, archaea) and eukaryotic cells (animals, plants).]

### Intended learning outcomes
Knowledge of the structures of prokaryotic and eukaryotic cells and their (biological) macromolecules. Knowledge of the specific characteristics of the intracellular and extracellular structures of prokaryotes as well as animal and plant cells. Familiarity with the components and functioning of microscopes.

### Courses (type, number of weekly contact hours, language — if other than German)
V + Ü (no information on SWS (weekly contact hours) and course language available)

### Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)
written examination (60 minutes)

### Contents

Fundamental principles of bioinformatics.

### Intended learning outcomes

Students are proficient in methods for the analysis of DNA and protein databases.

### Courses

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 07-3A3B1-1B-072: V (no information on SWS (weekly contact hours) and course language available)
- 07-3A3B1-2B-072: S (no information on SWS (weekly contact hours) and course language available)

### Method of assessment

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

- **Assessment in module component 07-3A3B1-1B-072: Bioinformatics (Lecture)**
  - 1 ECTS, Method of grading: numerical grade
  - written examination (approx. 20 minutes)

- **Assessment in module component 07-3A3B1-2B-072: Bioinformatics (Seminar)**
  - 1 ECTS, Method of grading: (not) successfully completed
  - term paper (approx. 5 to 10 pages)

### Allocation of places

Only as part of Biochemistry Master's: 5 places. Places will be allocated by lot.

### Additional information

**Referred to in LPO I** (examination regulations for teaching-degree programmes)
### Module title

Ecology of plants and animals

### Abbreviation

### ECTS

6

### Method of grading

Only after succ. compl. of module(s)

### Numerical grade

--

### Duration

1 semester

### Module level

undergraduate

### Other prerequisites

--

### Contents

This module will provide students with an overview of the interactions of plants and animals with their abiotic and biotic environments. The module will focus on the functional adaptation to environmental conditions as well as on the structure and dynamics of populations and ecosystems. Students will be introduced to fundamental model concepts of ecology, will become familiar with examples of research findings and will acquire the fundamental knowledge necessary to develop an understanding of current ecological problems.

### Intended learning outcomes

Students are familiar with the fundamental principles of research in the field of ecology and with the most important abiotic and biotic factors that influence the distribution and frequency of occurrence of organisms in their environment. In addition, they understand the scientific relevance ecology has to the assessment of environmental issues.

### Courses

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- **07-3A3OE-1T-072**: Ecology of Animals (Lecture and Practice)
  - 3 ECTS, Method of grading: numerical grade
  - written examination (45 minutes)

- **07-3A3OE-2P-072**: Ecology of Plant (Lecture and Practice)
  - 3 ECTS, Method of grading: numerical grade
  - written examination (60 minutes)

### Method of assessment

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

- **Assessment in module component 07-3A3OE-1T-072**: Ecology of Animals (Lecture and Practice)
  - 3 ECTS, Method of grading: numerical grade
  - written examination (45 minutes)

- **Assessment in module component 07-3A3OE-2P-072**: Ecology of Plant (Lecture and Practice)
  - 3 ECTS, Method of grading: numerical grade
  - written examination (60 minutes)

--
### Module title

Developmental Biology for advanced students

### Abbreviation

07-4BFMZ1-092-m01

### Module coordinator

holder of the Chair of Cell Biology and Developmental Biology

### Module offered by

Faculty of Biology

### ECTS

| 5 |

### Method of grading

numerical grade

### Only after succ. compl. of module(s)

--

### Duration

1 semester

### Module level

undergraduate

### Other prerequisites

--

### Contents

This module will acquaint students with the fundamental principles of the molecular developmental biology of animals. Particular emphasis will be placed on providing students with an opportunity to become proficient in fundamental methods and applications, using the help of examples.

### Intended learning outcomes

Students are able to use fundamental methods to approach simple problems in animal developmental biology.

### Courses

V + Ü (no information on SWS (weekly contact hours) and course language available)

### Method of assessment

(a) written examination (approx. 60 minutes) or (b) log (approx. 10 to 20 pages) or (c) oral examination of one candidate each (approx. 30 minutes) or (d) oral examination in groups (groups of up to 3 candidates, approx. 60 minutes) or (e) presentation (approx. 20 to 30 minutes)

## Contents

During this practical course, students will acquire an insight into a variety of topics in biotechnology.

## Intended learning outcomes

Students are able to apply advanced methods in biotechnology.

## Courses

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 07-4BFMZ5-1BT-092: P (no information on SWS (weekly contact hours) and course language available)
- 07-4BFMZ5-2BT-092: S (no information on SWS (weekly contact hours) and course language available)

**Method of assessment**

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 07-4BFMZ5-1BT-092: Biotechnology 1 (Lecture and Laboratory Practice)**

- 4 ECTS, Method of grading: numerical grade
- log (approx. 10 to 20 pages)
- Assessment offered: once a year, summer semester

**Assessment in module component 07-4BFMZ5-2BT-092: Seminar to Advanced Biotechnology 1**

- 1 ECTS, Method of grading: (not) successfully completed
- presentation (approx. 20 to 30 minutes)
- Assessment offered: once a year, summer semester

Contents

This module will equip students with the theoretical foundations of fundamental processes in plants, such as nitrogen and carbon metabolism. The methodological approaches in experimental plant physiology will be discussed and the molecular techniques for functional gene analysis (reverse genetics and other techniques) will be applied.

Intended learning outcomes

Students have acquired fundamental knowledge on plant nutrient cycles and are proficient in molecular and physiological methods in experimental plant physiology.

**Contents**

In this module, students will acquire the general fundamentals of plant membrane transport and the biophysical methods with which it can be characterised. For this purpose, students will be introduced to modern methods of molecular biology and imaging as well as data collection and analysis.

**Intended learning outcomes**

Students understand basic membrane transport processes and are able to use experimental methods in experiments with intact plants, isolated plant cells as well as animal expression systems.

**Contents**

In this module, students will become acquainted with the most important plant, biological and microbial photoreceptors and will learn the fundamental principles of the biochemical and molecular biological methods for the expression, isolation and purification as well as the biophysical characterisation of receptors.

**Intended learning outcomes**

Students are familiar with the biochemistry, molecular biology and function of biological photoreceptors and are able to analyse these using appropriate methods.

**Contents**

Using the examples of selected systems, this module will introduce students to the theoretical fundamentals of the interaction between plants and their environment and will make students familiar with the molecular biological, chemical analytical as well as ecophysiological methods necessary to investigate this interaction.

**Intended learning outcomes**

Students will be able to recognise, describe and evaluate interactions between plants and their environment. They will be able to perform basic experiments to analyse these interactions.

### Contents
In this module, students will acquire the theoretical and methodological fundamentals of drug and metabolite analysis. It will include an introduction to chromatographic methods of analysis as well as modern methods in computational chemistry. Qualitative and quantitative analyses of active agents and metabolites will be performed on, for example, complex drug, plant and urine samples.

### Intended learning outcomes
Students have developed fundamental knowledge and skills in the area of drug and metabolite analysis and are proficient in chromatographic methods.

### Courses (type, number of weekly contact hours, language — if other than German)
This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 07-4BFPS5-1BA-092: P (no information on SWS (weekly contact hours) and course language available)
- 07-4BFPS5-2BA-092: S (no information on SWS (weekly contact hours) and course language available)

### Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 07-4BFPS5-1BA-092: Pharmaceutical Bioanalytics (practical course)**
- 4 ECTS, Method of grading: numerical grade
- written examination (45 minutes)

**Assessment in module component 07-4BFPS5-2BA-092: Seminar Pharmaceutical Bio Analytics**
- 1 ECTS, Method of grading: (not) successfully completed
- presentation (approx. 20 to 30 minutes)
- Assessment offered: once a year, summer semester

### Contents

Fundamentals of and analytical methods in human and vertebrate cytogenetics. Characterisation of the normal human karyotype and chromosome aberrations. Introduction to chromosome evolution.

### Intended learning outcomes

Students who complete this module will acquire the theoretical basis of and practical experience in human cytogenetics. They will learn how to prepare and identify human chromosomes and critically interpret cytogenetic findings.

### Courses

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 03-4S1HG-1HZ-092: V + Ü (no information on SWS (weekly contact hours) and course language available)
- 03-4S1HG-2HZ-092: S (no information on SWS (weekly contact hours) and course language available)

### Method of assessment

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 03-4S1HG-1HZ-092: Human Genetics (Lecture and Laboratory Practice) Human Genetics (Lecture and Laboratory Practice)**

- 3 ECTS, Method of grading: numerical grade
- 2 written examinations (multiple choice): mid-semester examination (15 minutes), end-of-semester examination (20 minutes)
- Other prerequisites: A basic knowledge of genetics is recommended.

**Assessment in module component 03-4S1HG-2HZ-092: Human Genetics (Seminar)**

- 2 ECTS, Method of grading: (not) successfully completed
- presentation (approx. 20 to 30 minutes)
- Other prerequisites: A basic knowledge of genetics is recommended.

Module title: Immunology I
Abbreviation: 03-4S1IM-092-m01

Module coordinator: holder of the Professorship of Immunogenetics
Module offered by: Faculty of Medicine

ECTS: 5
Method of grading: numerical grade
Only after succ. compl. of module(s):

Duration: 1 semester
Module level: undergraduate
Other prerequisites:

Contents:
This module gives an introduction to immunology. The following questions will be addressed: How does the body recognise and eliminate pathogens and tumour cells? How can the immune system damage its own body (allergies, autoimmunity)? Organs, cells and molecules of the immune system will be presented with an emphasis on genetic and molecular mechanisms of recognition and elimination of foreign substances by the immune system. The most important immunological techniques will be introduced and applied.

Intended learning outcomes:
The students acquire a practical knowledge of cellular and molecular techniques for the analysis of the immune system. They are familiar with the mechanisms of self and non-self discrimination by the adaptive and innate immune systems. They acquire a fundamental knowledge of lymphocyte development as well as major immune effector cell functions and molecules.

Courses (type, number of weekly contact hours, language — if other than German):
This module comprises 2 module components. Information on courses will be listed separately for each module component.
- 03-4S1IM-1IM-092: V + Ü (no information on SWS (weekly contact hours) and course language available)
- 03-4S1IM-2IM-092: P (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus):
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component 03-4S1IM-1IM-092: Introduction into Immunology (Lecture and Practice) Introduction into Immunology (Lecture and Practice)
- 2 ECTS, Method of grading: numerical grade
- written examination (30 minutes)
- Language of assessment: German, English where required

Assessment in module component 03-4S1IM-2IM-092: Immunology (Laboratory Course)
- 3 ECTS, Method of grading: (not) successfully completed
- presentation (approx. 20 to 30 minutes)
- Language of assessment: German, English where required

**Duration**
1 semester

**Module level**
undergraduate

**Other prerequisites**
--

**Contents**
Working safely in a BSL-2 laboratory; cell culture; virus production; virus titration; virus sequencing; phylogenetic analysis of a viral quasispecies.

**Intended learning outcomes**
Students have developed a fundamental knowledge in molecular virology concerning the structure and replication of viruses, virus-host cell interactions and mechanisms of action of antiviral compounds. They are able to apply cell and molecular techniques of virological basic science.

**Courses**
This module comprises 3 module components. Information on courses will be listed separately for each module component.
- 03-4S1VL-1VL-092: V (no information on SWS (weekly contact hours) and course language available)
- 03-4S1VL-3VL-092: P (no information on SWS (weekly contact hours) and course language available)
- 03-4S1VL-2VL-092: S (no information on SWS (weekly contact hours) and course language available)

**Method of assessment**
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 03-4S1VL-1VL-092: Basic Virology (Lecture and Practice)**
- 1 ECTS, Method of grading: numerical grade
- written examination (20 minutes)
- Language of assessment: German, English where required

**Assessment in module component 03-4S1VL-3VL-092: Virology (Laboratory Course)**
- 3 ECTS, Method of grading: numerical grade
- written examination (20 minutes) or oral examination (20 minutes)
- Language of assessment: German, English

**Assessment in module component 03-4S1VL-2VL-092: Seminar on General Virology**
- 1 ECTS, Method of grading: (not) successfully completed
- presentation (approx. 20 to 30 minutes)
- Language of assessment: German, English where required

**Module title**
Ecology and Developmental Biology of marine organisms

**Abbreviation**
07-4S1MZ3-092-m01

**Module coordinator**
head of the Department of Electronmicroscopy

**Module offered by**
Faculty of Biology

**ECTS**
5

**Method of grading**
numerical grade

**Duration**
1 semester

**Module level**
undergraduate

**Other prerequisites**
By way of exception, additional prerequisites are listed in the section on assessments.

**Contents**
A combination of lab work and field trips, this module will provide students with an insight both into the organismal diversity of a marine ecosystem and into the biocenosis of the littoral of the island of Helgoland in the North Sea.

**Intended learning outcomes**
Students are familiar with the morphology, developmental biology, physiology and ecology of organisms in a marine ecosystem.

**Courses**
This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 07-4S1MZ3-1MO-092: Ü (no information on SWS (weekly contact hours) and course language available)
- 07-4S1MZ3-2MO-092: S (no information on SWS (weekly contact hours) and course language available)

**Method of assessment**
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 07-4S1MZ3-1MO-092: Ecology and Developmental Biology of Marine Organisms**

- 4 ECTS, Method of grading: numerical grade
- log (approx. 10 to 20 pages)
- Assessment offered: once a year, summer semester
- Other prerequisites: Admission prerequisite to assessment: regular attendance of exercises and successful completion of the respective exercises as specified at the beginning of the course.

**Assessment in module component 07-4S1MZ3-2MO-092: Seminar on Marine Biology**

- 1 ECTS, Method of grading: (not) successfully completed
- presentation (approx. 20 to 30 minutes)
- Assessment offered: once a year, summer semester

**Allocation of places**
Information on the allocation of places will be listed separately for each module component.

- 07-4S1MZ3-1MO-092: Number of places: 18. Should the number of applications exceed the number of available places, places will be allocated as follows: Places will primarily be allocated to students of the Bachelor's degree subject Biologie (Biology) with 180 ECTS credits. Should the module be used in other subjects, there will be two quotas: 95% of places will be allocated to students of the Bachelor's degree subject Biologie (Biology) with 180 ECTS credits and 5% of places (a minimum of one participant in total) will be allocated to students of the Bachelor’s degree subject Biologie (Biology) with 60 ECTS credits and to students of the Bachelor's degree subjects Computational Mathematics and Mathematik (Mathematics), each with 180 ECTS credits, as part of the application-oriented subject Biologie (as well as potentially to students of other 'importing' subjects). Should the number of places available in one quota exceed the number of applications, the remaining places will be allocated to applicants from the
other quota. Should there be, within one module component, several courses with a restricted number of places, there will be a uniform regulation for the courses of one module component. In this case, places on all courses of a module component that are concerned will be allocated in a standardised procedure. In this procedure, applicants who already have successfully completed at least one other module component of the respective module will be given preferential consideration. A waiting list will be maintained and places re-allocated as they become available. Selection process group 1 (95%): Places will primarily be allocated according to the applicants' previous academic achievements. For this purpose, applicants will be ranked according to the number of ECTS credits they have achieved and their average grade of all assessments taken during their studies or of all module components in the subject of Biologie (Biology) (excluding Chemie (Chemistry), Physik (Physics), Mathematik (Mathematics)) at the time of application. This will be done as follows: First, applicants will be ranked, firstly, according to their average grade weighted according to the number of ECTS credits (qualitative ranking) and, secondly, according to their total number of ECTS credits achieved (quantitative ranking). The applicants' position in a third ranking will be calculated as the sum of these two rankings, and places will be allocated according to this third ranking. Among applicants with the same ranking, places will be allocated according to the qualitative ranking or otherwise by lot. Selection process group 2 (5%): Places will be allocated according to the following quotas: Quota 1 (50% of places): total number of ECTS credits already achieved in modules/module components of the Faculty of Biology; among applicants with the same number of ECTS credits achieved, places will be allocated by lot. Quota 2 (25% of places): number of subject semesters of the respective applicant; among applicants with the same number of subject semesters, places will be allocated by lot. Quota 3 (25% of places): allocation by lot. Should the module be used only in the Bachelor's degree subject Biologie (Biology) with 180 ECTS credits, places will be allocated according to the selection process of group 1.

Contents

This module will provide students with an overview of instrument-based methods in biotechnology and biomedicine. In particular, imaging methods as well as single-cell technologies will be discussed. Publications on the methodology of biotechnology will be analysed.

Intended learning outcomes

Students are able to select the instrument-based method in biotechnology and biomedicine that is appropriate to a particular problem.

Courses

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 07-4S1MZ4-1AB-092: V (no information on SWS (weekly contact hours) and course language available)
- 07-4S1MZ4-2AB-092: S (no information on SWS (weekly contact hours) and course language available)

Method of assessment

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component 07-4S1MZ4-1AB-092: Methods in Biotechnology (Lecture)
- 1 ECTS, Method of grading: numerical grade
- written examination (20 minutes)

Assessment in module component 07-4S1MZ4-2AB-092: Seminar on Methods in Biotechnology
- 1 ECTS, Method of grading: (not) successfully completed

Contents
Theoretical aspects of modern molecular biotechnology.

Intended learning outcomes
Students have acquired knowledge and skills in the area of molecular biotechnology.

Courses
This module comprises 2 module components. Information on courses will be listed separately for each module component.
- 07-4S1MZ5-1MB-092: V (no information on SWS (weekly contact hours) and course language available)
- 07-4S1MZ5-2MB-092: S (no information on SWS (weekly contact hours) and course language available)

Method of assessment
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 07-4S1MZ5-1MB-092: Aspects of Modern Biotechnology (Lecture)**
- 1 ECTS, Method of grading: numerical grade
- written examination (20 minutes)

**Assessment in module component 07-4S1MZ5-2MB-092: Seminar on Molecular Biotechnology**
- 1 ECTS, Method of grading: (not) successfully completed
- presentation (approx. 20 to 30 minutes)
- Assessment offered: once a year, summer semester

Module title: Functional Morphology of arthropods

Abbreviation: 07-45tNVO3-092-m01

Module coordinator: holder of the Chair of Zoology III

Module offered by: Faculty of Biology

ECTS: 5

Method of grading: numerical grade

Duration: 1 semester

Module level: undergraduate

Other prerequisites: Admission prerequisite to assessment: regular attendance of exercises and successful completion of the respective exercises as specified at the beginning of the course.

Contents:
Morphology, anatomy, phylogeny and ecology of arthropods.

Intended learning outcomes:
Students are able to explain arthropod radiations in a functional context as well as to explain the importance of arthropods to ecosystems.

Courses:
V + Ü (no information on SWS (weekly contact hours) and course language available)

Method of assessment:
term paper (approx. 5 to 10 pages)

Allocation of places:
Number of places: 20. Should the number of applications exceed the number of available places, places will be allocated as follows: Places will primarily be allocated to students of the Bachelor’s degree subject Biologie (Biology) with 180 ECTS credits. Should the module be used in other subjects, there will be two quotas: 95% of places will be allocated to students of the Bachelor’s degree subject Biologie (Biology) with 180 ECTS credits and 5% of places (a minimum of one participant in total) will be allocated to students of the Bachelor’s degree subject Biologie (Biology) with 60 ECTS credits and to students of the Bachelor’s degree subjects Computational Mathematics and Mathematik (Mathematics), each with 180 ECTS credits, as part of the application-oriented subject Biologie (as well as potentially to students of other ‘importing’ subjects). Should the number of places available in one quota exceed the number of applications, the remaining places will be allocated to applicants from the other quota. **Contents**

Complex experiments to introduce students to the current state of research in plant ecophysiology as well as discussion of experimental findings in a comprehensive scientific context.

**Intended learning outcomes**

Students are able to use current methods in plant ecophysiology as well as to document experimental findings and put these in a scientific context.

**Courses** (type, number of weekly contact hours, language — if other than German)

V + Ü (no information on SWS (weekly contact hours) and course language available)

**Method of assessment** (type, scope, language — if other than German, examination offered — If not every semester, information on whether module is creditable for bonus)

log (approx. 10 to 20 pages)

### Contents

This module will introduce students to the major active agent groups in medicinal plants and phytopharmaceuticals as well as to their application in pharmacy. Microscopic and phytochemical analyses will be performed and the requirements and analytical methods of the pharmacopoeia will be explained.

### Intended learning outcomes

Students have acquired a specialist knowledge on active agents from medicinal plants and phytopharmaceuticals as well as on the requirements and analytical methods of the pharmacopoeia.

### Courses

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 07-4S1PS3-1PD-092: Ü (no information on SWS (weekly contact hours) and course language available)
- 07-4S1PS3-2PD-092: S (no information on SWS (weekly contact hours) and course language available)

### Method of assessment

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 07-4S1PS3-1PD-092: Pharmaceutical Drugs (Laboratory Course)**
- 3 ECTS, Method of grading: numerical grade
- written examination (45 minutes)

**Assessment in module component 07-4S1PS3-2PD-092: Seminar on Pharmaceutical Drugs**
- 2 ECTS, Method of grading: (not) successfully completed
- presentation (approx. 20 to 30 minutes)

**Contents**

This module will provide students with a theoretical and methodological introduction to fundamental techniques in molecular biology and drug analysis.

**Intended learning outcomes**

Students are able to analyse groups of drugs, using a variety of methods.

**Courses**

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- **07-4S1PS4-1PB-092**: P (no information on SWS (weekly contact hours) and course language available)

### Contents

This module will provide students with deeper insights into the following topics: the neuronal bases of cognition, sensory systems, learning and memory.

### Intended learning outcomes

Students are able to acquaint themselves with and deliver presentations on advanced topics in neurobiology, taking into account current literature.

### Courses (type, number of weekly contact hours, language — if other than German)

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- **07-5S2NVO1-1NB-092**: V + Ü (no information on SWS (weekly contact hours) and course language available)
- **07-5S2NVO1-2NB-092**: S (no information on SWS (weekly contact hours) and course language available)

### Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

#### Assessment in module component 07-5S2NVO1-1NB-092: Neurobiology 2 (lecture and practical course) Neurobiology 2 (lecture and practical course)

- 7 ECTS, Method of grading: numerical grade
- a) written examination (approx. 60 minutes) or b) log (approx. 10 to 20 pages) or c) oral examination of one candidate each (approx. 30 minutes) or d) oral examination in groups (groups of 2 or 3 candidates, approx. 60 minutes) or e) presentation (approx. 20 to 30 minutes)
- Language of assessment: German or English

#### Assessment in module component 07-5S2NVO1-2NB-092: Neurobiology 2 (seminar)

Only after suc. compl. of module(s)

Duration
1 semester

Module level
undergraduate

Other prerequisites

Contents
In this module, students will acquire an in-depth insight into approaches and methods in molecular and cell biology.

Intended learning outcomes
Students have acquired knowledge about general strategies and methods of molecular and cell biology. They are able to independently perform scientific laboratory work.

Courses
This module comprises 3 module components. Information on courses will be listed separately for each module component.

• 07-5S2MZ1-1ZE-092: V + Ü (no information on SWS (weekly contact hours) and course language available)
• 07-5S2MZ1-2ZE-092: Ü (no information on SWS (weekly contact hours) and course language available)
• 07-5S2MZ1-3ZE-092: S (no information on SWS (weekly contact hours) and course language available)

Method of assessment
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component 07-5S2MZ1-1ZE-092: Methods in molecular cell - and developmental Biology - Data processing and computer skills (lecture and practice)

• 3 ECTS, Method of grading: numerical grade
• a) written examination (approx. 60 minutes) or b) log (approx. 10 to 20 pages) or c) oral examination of one candidate each (approx. 30 minutes) or d) oral examination in groups (groups of 2 or 3 candidates, approx. 60 minutes) or e) presentation (approx. 20 to 30 minutes)
• Language of assessment: German or English

Assessment in module component 07-5S2MZ1-2ZE-092: Methods in molecular cell - and developmental Biology (laboratory course)

• 6 ECTS, Method of grading: numerical grade
• a) written examination (approx. 60 minutes) or b) log (approx. 10 to 20 pages) or c) oral examination of one candidate each (approx. 30 minutes) or d) oral examination in groups (groups of 2 or 3 candidates, approx. 60 minutes) or e) presentation (approx. 20 to 30 minutes)
• Language of assessment: German, English

Assessment in module component 07-5S2MZ1-3ZE-092: Current topics in molecular cell - and developmental Biology (seminar)

• 1 ECTS, Method of grading: (not) successfully completed
• presentation (approx. 20 to 30 minutes)

Module title: Physiology of membrane transport mechanisms
Abbreviation: 07-5S2PS1-092-m01

Module coordinator: holder of the Chair of Plant Physiology and Biophysics
Module offered by: Faculty of Biology

ECTS: 10
Method of grading: numerical grade
Duration: 1 semester
Module level: undergraduate
Other prerequisites: --

Contents:
The module will address topics in contemporary research on plant membrane transport with modern molecular biological and biophysical methods. On the basis of current scientific publications, different aspects of plant physiology will be presented and discussed in English.

Intended learning outcomes:
Students are familiar with current research in the field of plant membrane transport as well as with the methods used. They are able to interpret and deliver presentations on scientific publications.

Courses:
This module comprises 2 module components. Information on courses will be listed separately for each module component.
- 07-5S2PS1-1MT-092: Ü (no information on SWS (weekly contact hours) and course language available)
- 07-5S2PS1-2MT-092: S (no information on SWS (weekly contact hours) and course language available)

Method of assessment:
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component 07-5S2PS1-1MT-092: Physiology of membrane transport mechanisms (laboratory course)
- 9 ECTS, Method of grading: numerical grade
- a) written examination (approx. 60 minutes) or b) log (approx. 10 to 20 pages) or c) oral examination of one candidate each (approx. 30 minutes) or d) oral examination in groups (groups of 2 or 3 candidates, approx. 60 minutes) or e) presentation (approx. 20 to 30 minutes)
- Language of assessment: German or English

Assessment in module component 07-5S2PS1-2MT-092: Physiology of membrane transport mechanisms - Progress in plant physiology (seminar)
- 1 ECTS, Method of grading: (not) successfully completed
- presentation (approx. 20 to 30 minutes)

Contents
In this module, students will acquire advanced knowledge and skills in techniques of molecular biology for questions of plant physiology. Every student will perform a physiological experiment that will be analysed using the methods the students have learned. Current scientific publications in the field of plant physiology will be presented and discussed in English.

Intended learning outcomes
Students are able to perform advanced experiments in plant physiology as well as to interpret and deliver presentations on scientific publications.

Courses
This module comprises 2 module components. Information on courses will be listed separately for each module component.

• 07-5S2PS2-1MP-092: Ü (no information on SWS (weekly contact hours) and course language available)
• 07-5S2PS2-2MP-092: S (no information on SWS (weekly contact hours) and course language available)

Method of assessment
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component 07-5S2PS2-1MP-092: Molecular Biology of plants (laboratory course)
• 9 ECTS, Method of grading: numerical grade
  • a) written examination (approx. 60 minutes) or b) log (approx. 10 to 20 pages) or c) oral examination of one candidate each (approx. 30 minutes) or d) oral examination in groups (groups of 2 or 3 candidates, approx. 60 minutes) or e) presentation (approx. 20 to 30 minutes)
  • Language of assessment: German or English

Assessment in module component 07-5S2PS2-2MP-092: Molecular Biology of plants - Progress in plant physiology (seminar)
• 1 ECTS, Method of grading: (not) successfully completed
  • presentation (approx. 20 to 30 minutes)

07-5S2PS4-092-m01

**Module coordinator**
holder of the Chair of Plant Physiology and Biophysics

**Module offered by**
Faculty of Biology

**ECTS**
10

**Method of grading**
numerical grade

**Duration**
1 semester

**Module level**
undergraduate

**Other prerequisites**
--

**Contents**
In this module, students will learn to independently apply advanced molecular biological, chemical analytical or ecological methods. Experimental findings will be evaluated, interpreted and documented in the context of the current state of research.

**Intended learning outcomes**
Students are able to independently perform complex experiments in the field of plant ecophysiology, to interpret their findings in the context of the current state of research as well as to document these.

**Courses**
This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 07-5S2PS4-1OP-092: Ü (no information on SWS (weekly contact hours) and course language available)
- 07-5S2PS4-2OP-092: S (no information on SWS (weekly contact hours) and course language available)

**Method of assessment**
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 07-5S2PS4-1OP-092: Advanced ecophysiology of plants (laboratory course)**
- 9 ECTS, Method of grading: numerical grade
  - a) written examination (approx. 60 minutes) or b) log (approx. 10 to 20 pages) or c) oral examination of one candidate each (approx. 30 minutes) or d) oral examination in groups (groups of 2 or 3 candidates, approx. 60 minutes) or e) presentation (approx. 20 to 30 minutes)
  - Language of assessment: German or English

**Assessment in module component 07-5S2PS4-2OP-092: Specific ecophysiology of plants (seminar)**
- 1 ECTS, Method of grading: (not) successfully completed
  - presentation (approx. 20 to 30 minutes)

**Allocation of places**
--

**Additional information**
--

**Referred to in LPO I** (examination regulations for teaching-degree programmes)

### Contents

Being involved in a current research project, students will become proficient in advanced methods in molecular plant physiology, molecular biology, biochemistry or cell culture.

### Intended learning outcomes

Students are proficient in advanced methods in pharmaceutical biology with a focus on molecular biology and possess the skills necessary for conducting research in the context of research projects.

### Courses

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 07-5S2PS5-1MB-092: P (no information on SWS (weekly contact hours) and course language available)
- 07-5S2PS5-2MB-092: S (no information on SWS (weekly contact hours) and course language available)

### Method of assessment

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 07-5S2PS5-1MB-092: Molecular biological methods in pharmaceutical biology (Laboratory course)**

- 9 ECTS, Method of grading: numerical grade
- a) written examination (approx. 60 minutes) or b) log (approx. 10 to 20 pages) or c) oral examination of one candidate each (approx. 30 minutes) or d) oral examination in groups (groups of 2 or 3 candidates, approx. 60 minutes) or e) presentation (approx. 20 to 30 minutes)
- Language of assessment: German or English

**Assessment in module component 07-5S2PS5-2MB-092: Molecular biological methods in pharmaceutical biology (seminar)**

- 1 ECTS, Method of grading: (not) successfully completed
- presentation (approx. 20 to 30 minutes)

**Contents**

Specific problems in immunology such as immune modulation, immunogenetics, infection immunology, signal transduction in immune cells.

**Intended learning outcomes**

The students acquire specific competence about the functional mechanisms of the immune system. They are qualified to plan and perform experiments under supervision and present the data, taking into account current literature.

**Contents**

Fundamentals and analytical approaches of physiological chemistry are taught based on selected questions from human biochemistry. Physiological processes are compared with examples of pathological aberrations. Molecular genetic and functional biochemical networks are presented using examples from developmental biochemistry, pathobiochemistry and cellular biochemistry.

**Intended learning outcomes**

Students have developed the ability to approach, analyse and interpret general problems in physiological chemistry based on individually assigned tasks, using techniques of modern molecular biology and biochemistry. They also have developed skills in experimental design, bench work, data analysis and the presentation of scientific results.

**Courses** *(type, number of weekly contact hours, language — if other than German)*

This module comprises 2 module components. Information on courses will be listed separately for each module component.

## Contents

This module will address one of the central issues of biology: evolution. Fundamental mechanisms and hypotheses will be discussed and students will be introduced to major phylogenetic reconstruction methods.

## Intended learning outcomes

Ability to recognise evolution as the driving force behind the phylogeny of species. Familiarity with the concepts of phylogenetic relationships between plants/animals.

## Courses

Ü (no information on SWS (weekly contact hours) and course language available)

## Method of assessment

written examination (30 minutes)

### Module title
**The Animal Kingdom**

### Abbreviation
07-1A1T-072-m01

### Module coordinator
holder of the Professorship of Zoology at the Department of Electronmicroscopy

### Module offered by
Faculty of Biology

### ECTS
4

### Method of grading
numerical grade

### Only after succ. compl. of module(s)
--

### Duration
1 semester

### Module level
undergraduate

### Other prerequisites
Admission prerequisite to assessment: regular attendance of and participation in exercises as well as successful completion of the respective exercises as specified at the beginning of the course.

### Contents
Using the example of animals, students will be introduced to the phylogenetic diversity of eukaryotes. At the level of groups in the animal kingdom, students will acquire the fundamental knowledge necessary to understand the forms and functions of animal organisms, with morphology and cytology being discussed in an evolutionary and ecological context.

### Intended learning outcomes
Familiarity with the concepts of phylogenetic relationships between animals. Familiarity with the distinguishing characteristics and major representatives of groups in the animal kingdom. Ability to select those animal organisms that are most suitable for particular scientific issues. Familiarity with the components and functioning of microscopes. Fundamental skills in the interpretation of macroscopic and histologic preparations by light microscopy. Fundamental preparation skills.

Das Modul bietet einen Überblick über die elementaren Grundkenntnisse der organischen Chemie. Dazu wird die Bindungssituation am Kohlenstoff betrachtet und in die Nomenklatur einfacher und mäßig komplexer organischer Verbindungen eingeführt. Es werden Grundlagen der Stereochemie, Substitutions-, Additions- und Eliminierungsreaktionen sowie der Syntheseplanung vermittelt.

**Contents**

Mechanics, vibration theory, thermodynamics, optics, science of electricity, Atomic and Nuclear Physics.

**Intended learning outcomes**

The students have knowledge of the principles of Physics.

**Courses** (type, number of weekly contact hours, language — if other than German)

V + V (no information on SWS (weekly contact hours) and course language available)

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

written examination (approx. 120 minutes)

**Allocation of places**

Only as part of pool of general key skills (ASQ): 10 places. Places will be allocated by lot.

**Contents**

Introduction to basic ideas and particular sub-areas of "Human Geography".

**Intended learning outcomes**

Students possess the following skills: basics and definitions to Human Geography, research institutions and technical conception to Human Geography. This includes Urban Geography, Geography of Rural Settlements, Economic Geography, Social Geography, Population Geography and Civilisation Geographical Research.

**Courses**

This module comprises 3 module components. Information on courses will be listed separately for each module component.

- 09-HG1-1-072: V + T (no information on SWS (weekly contact hours) and course language available)
- 09-HG1-2-072: V + T (no information on SWS (weekly contact hours) and course language available)
- 09-HG1-3-072: V + T (no information on SWS (weekly contact hours) and course language available)

**Method of assessment**

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 09-HG1-1-072: Introduction to the Geography of cities, towns and villages**

- 5 ECTS, Method of grading: numerical grade
- written examination (45 minutes)

**Assessment in module component 09-HG1-2-072: Introduction to Economic Geography**

- 5 ECTS, Method of grading: numerical grade
- written examination (45 minutes)

**Assessment in module component 09-HG1-3-072: Introduction to Social and Population Geography**

- 5 ECTS, Method of grading: numerical grade
- written examination (45 minutes)

**Allocation of places**

1 semester | undergraduate | By way of exception, additional prerequisites are listed in the section on assessments.

Contents

Introduction to "Physical Geography": basics of exogenous dynamics, endogenous dynamics and climatology.

Intended learning outcomes

Students possess the following skills: basics of the system earth, i.e. the understanding of processes that are dominating the landscape on the Earth’s surface and which are driven by the geological factors rocks, relief, climate, soil, water, flora and fauna. They are important for the understanding of the structure, function and dynamics of the natural space and its anthropogenic transformation (i.e. the environment, which has been shaped from humans by land using, settlements, transport routes etc.).

Courses

This module comprises 3 module components. Information on courses will be listed separately for each module component.

- 09-PG1-1-072: V + T (no information on SWS (weekly contact hours) and course language available)
- 09-PG1-2-072: V + T (no information on SWS (weekly contact hours) and course language available)
- 09-PG1-3-072: V + T (no information on SWS (weekly contact hours) and course language available)

Method of assessment

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 09-PG1-1-072:** General Physical Geography 1 (Earth System: Endogenic Dynamics)

- 5 ECTS, Method of grading: numerical grade
- written examination (45 minutes)

**Assessment in module component 09-PG1-2-072:** General Physical Geography 2 (Earth System: Climate System)

- 5 ECTS, Method of grading: numerical grade
- written examination (45 minutes)
- Other prerequisites: Registration for assessment: Yes, as specified.

**Assessment in module component 09-PG1-3-072:** General Physical Geography 3 (Earth System: Endogenic Dynamics)

- 5 ECTS, Method of grading: numerical grade
- written examination (45 minutes)
- Other prerequisites: Registration for assessment: Yes, as specified.

### Contents

Introduction to "Cartography and to the Collection and Processing of Geodata", introduction to "Geographic Information Systems" (GIS).

### Intended learning outcomes

Students possess the following skills: basics of Cartography and the use of geodata, acquisition of abilities concerning the dealing with geodata and Geographical Information Systems (GIS).

### Courses

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 09-KART-1-072: V + T (no information on SWS (weekly contact hours) and course language available)
- 09-KART-2-072: Ü (no information on SWS (weekly contact hours) and course language available)

### Method of assessment

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

#### Assessment in module component 09-KART-1-072: Cartography and Geodata Cartography and Geodata

- 5 ECTS, Method of grading: numerical grade
- written examination (approx. 75 minutes) or practice work (creating approx. 3 maps or diagrams, approx. 30 hours total), weighted 1:1

#### Assessment in module component 09-KART-2-072: Geographical Information Systems (GIS)

- 5 ECTS, Method of grading: numerical grade
- practice work (approx. 5 pieces of practice work to be completed in approx. 30 hours)

</tr>
</tbody>
</table>

### Contents

This module covers synthesis and networking of physical-geographical factors in the light of different methodical approaches and particularly on the basis of the human impact: geomorphology, climate, soil, hydro geography, global change and past global change incl. geo and ecosystem research and ecosystem prediction as well as the cycle of materials on Earth's surface.

### Intended learning outcomes

Students are acquainted with the synthesis and interconnectedness of skills that have already been acquired concerning the processes on Earth's surface, which are dominating the landscape on Earth's surface and are driven by the geological factors rock, relief, climate, soil, water, flora and fauna. These processes determine structure, function and dynamics of the natural environment and its anthropogenic transformation (the environment that has been shaped from humans by land utilisation, settlements, transport routes etc.). Through the quantitative acquisition of current process structures, Physical Geography is not only able to derive predications for the capability and capacity of geological systems, but also to predict changes in future by analysing the development and change of geographical territories in the past. These important planning decision-making bases concerning the management as well as the sustainable use and development, are given weight to the task of Physical Geography in the practical area.

### Courses

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 09-PG2-1-072: V (no information on SWS (weekly contact hours) and course language available)
- 09-PG2-2-072: S (no information on SWS (weekly contact hours) and course language available)

### Method of assessment

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 09-PG2-1-072:** Special Problems of Physical Geography 1 (Earth System: Man and environment)

- 5 ECTS, Method of grading: numerical grade
- written examination (approx. 45 minutes)

**Assessment in module component 09-PG2-2-072:** Special Problems of Physical Geography 2 (Earth System: Man and environment)

- 5 ECTS, Method of grading: numerical grade
- presentation (approx. 30 minutes) with written elaboration (approx. 20 pages), weighted 1:1

**Duration**  
1 semester

**Module coordinator**  
holder of the Chair of Physical Geography

**Module offered by**  
Institute of Geography and Geology

**Contents**
Students will choose a topic of "Physical Geography" and attend a project seminar: data collection, data analysis and presentation of explored issues.

**Intended learning outcomes**
Students know how to use their skills, which they have already acquired in the area basics and methods, in order to implement them practically. Based on a specific issue, which is partly integrated in a current research project, process steps of geographical research and method will be undergone. Students are acquainted with the data collection in the field or the modelling at the computer, the application of statistical processes, the cartographic visualisation and presentation in form of lectures, posters, films, Internet or reports. They also possess the ability to work independently.

**Courses**
This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 09-PG3-1-072: S (no information on SWS (weekly contact hours) and course language available)
- 09-PG3-2-072: S (no information on SWS (weekly contact hours) and course language available)

**Method of assessment**
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 09-PG3-1-072:**
- Project Seminar: Establishing Current Status and Data Acquisition
  - 5 ECTS, Method of grading: numerical grade
  - presentation (30 minutes) with written elaboration (20 pages), weighted 1:1

**Assessment in module component 09-PG3-2-072:**
- Project Seminar: Data Evaluation, Data Visualisation and Presentation
  - 5 ECTS, Method of grading: numerical grade
  - project report (20 pages)

**Contents**

Consolidation of methodical knowledge concerning the collection and processing of data sets, which will be aduced in "Physical Geography" as a typical example in order to understand the natural environment; Advanced students can attend alternative seminars, in which applications from the areas ground climatology, climate modelling, geophysical methods, soil science of fields, remote sensing and GIS (geographic information system) will be offered optionally.

**Intended learning outcomes**

Students possess in-depth knowledge of the area Basic Course, Methodology, Cartography, Statistics and EDP which will be acquired through a specific task. Thus, each form of data collection in the field or the modelling at the computer with different stages of data processing in the lab or at the computer will be linked together in order to teach the practical dealing with geophysical measurement methods as well as the dealing with different software applications.

**Courses**

(No information on SWS (weekly contact hours) and course language available)

**Method of assessment**

Presentation (15 minutes) with written elaboration (15 pages), weighted 1:1

Contents

Basic observations on geological materials that can already be made in the field and which can lead to a first interpretation of geological processes, which took place, as well as the creation of value of geomaterials. Students will be provided with distinctive features and characteristics of the most important rock-forming and economically relevant minerals by means of chosen visuals. Subsequently, the classification of the most important sedimentary, igneous and metamorphic rock types will be elucidated and practised on the basis of their in the hand-piece identifiable mineral existence and structure. In the following modular section, the understanding of two-dimensional display of three-dimensional display of geological phenomena like the geographical distribution of different rock types or tectonic structures will be developed in form of geological maps and sections as well as simple structural-geological diagrams.

Intended learning outcomes

Students are able to identify the most important mineral types and as far as possible, to outline and interpret the rock samples without analytical tools. Moreover, they are able to interpret geological maps correctly and to show geological field observations in map form, profiles and suitable diagrams.

Courses

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 09-MT3-1-072: S (no information on SWS (weekly contact hours) and course language available)
- 09-MT3-2-072: Ü (no information on SWS (weekly contact hours) and course language available)

Method of assessment

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component 09-MT3-1-072: Mineral an Rock Identification

- 5 ECTS, Method of grading: numerical grade
- written or oral examination of one candidate each (30 minutes each)

Assessment in module component 09-MT3-2-072: Geological Maps and Structures

- 5 ECTS, Method of grading: numerical grade
- written or oral examination of one candidate each (30 minutes each) or term paper (approx. 20 pages)

**Contents**

Field course: basic principles of physical-geographical field, mapping and measuring method (geomorphology, soil geography, vegetation geography, hydro geography, climatology); 10 days of fieldwork. Practical exercise: data preparation, analysis and interpretation; Synthesis of partial results, visualisation and presentation of data with the help of the GIS discussion and the production of a final report.

**Intended learning outcomes**

Students possess the fundamental physical-geographical mapping, measurement and lab methods. They have skills of the difficulties of field, measurement and lab works and possess an overview of analysis and interpretation possibilities of the acquired field and lab data. They possess the visualisation and presentation of geodata and have the ability of networked considerations and of discussing the results scientifically.

- 09-MT5-2-072: S (no information on SWS (weekly contact hours) and course language available)

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 09-MT5-1-072:** Introduction to physiogeographical Fieldwork Skills, Field Mapping and Measuring

- 5 ECTS, Method of grading: numerical grade
- placement report / fieldwork report / report on practical training / report on practical course / project report / report on technical course (approx. 15 pages)
- Other prerequisites: A basic knowledge of inorganic chemistry and physics is recommended.

**Assessment in module component 09-MT5-2-072:** Data management, -analysis and -interpretation

- 5 ECTS, Method of grading: numerical grade
- presentation of project (approx. 30 minutes) and written elaboration (approx. 20 pages); weighted 1:1
- Other prerequisites: A basic knowledge of inorganic chemistry and physics is recommended.

### Module title

Special Issues of Human Geography

### Abbreviation

09-HG2-072-m01

### Module coordinator

holder of the Professorship of Social Geography

### Module offered by

Institute of Geography and Geology

### ECTS

10

### Method of grading

numerical grade

### Only after succ. compl. of module(s)

two module components of 09-HG1

### Duration

1 semester

### Module level

undergraduate

### Other prerequisites

--

### Contents

This module deals with and consolidates chosen issues of "Theoretical and Applied Human Geography" from two different sub-areas of "Human Geography".

### Intended learning outcomes

Students possess subject-specific theories and have solid knowledge of two sub-areas of Human Geography and their application-oriented implementation. They are able to issue a seminar paper on the basis of independent literary work as well as present the seminar papers in a presentation, which will be held freely.

### Courses

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- **09-HG2-1-072**: S (no information on SWS (weekly contact hours) and course language available)
- **09-HG2-2-072**: S (no information on SWS (weekly contact hours) and course language available)

### Method of assessment

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

#### Assessment in module component 09-HG2-1-072: Special issues of Human Geography 1

- 5 ECTS, Method of grading: numerical grade
- Presentation (approx. 30 minutes) with written elaboration (approx. 20 pages), weighted 1:1

#### Assessment in module component 09-HG2-2-072: Special issues of Human Geography 2

- 5 ECTS, Method of grading: numerical grade
- Presentation (approx. 30 minutes) with written elaboration (approx. 20 pages), weighted 1:1

### Allocation of places

--

### Contents

Students will choose a topic of "Human Geography" and attend a project seminar: data collection, data analysis and presentation of explored issues.

### Intended learning outcomes

Students possess the following skills:
- Application of the already acquired technical and methodological basics of practice-oriented issues of geographical planning and development using empirical research methods;
- Elaboration of action-oriented solutions;
- Presentation of results;
- Knowledge concerning the use of empirical survey and analysis methodology, project work, team spirit, results-oriented methods, acquisition of communicative technique skills.

### Courses

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 09-HG3-1-072: S (no information on SWS (weekly contact hours) and course language available)
- 09-HG3-2-072: S (no information on SWS (weekly contact hours) and course language available)

### Method of assessment

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 09-HG3-1-072:** Project oriented Seminar 1 for Applied Human Geography
- 5 ECTS, Method of grading: numerical grade
- presentation (approx. 30 minutes) with written elaboration (approx. 20 pages), weighted 1:1

**Assessment in module component 09-HG3-2-072:** Project oriented Seminar 2 for Applied Human Geography
- 5 ECTS, Method of grading: numerical grade
- presentation (approx. 30 minutes) with written elaboration (approx. 20 pages), weighted 1:1

Module title: Quantitative and Qualitative Regional Analysis
Abbreviation: 09-MT4-072-m01

Module coordinator
holder of the Professorship of Social Geography

Module offered by
Institute of Geography and Geology

ECTS: 10 Method of grading: Only after succ. compl. of module(s)
- numerical grade: 09-MT2 as well as one module component of modules 09-KART and 09-STAT each

Duration: 1 semester Module level: undergraduate Other prerequisites: --

Contents
This module includes processes of quantitative regional research, multivariate statistical processes, processes of geographical modelling and simulation. Processes of qualitative social and regional research. Presentation and discussion of methods, criticism of methods. Application of methods based on typical examples.

Intended learning outcomes
Students possess the following skills: The students' process-related skills will be applied to regional and analytical methods as well as the skills concerning the assessment and evaluation of the processes application and efficiency.

Courses (type, number of weekly contact hours, language — if other than German)
This module comprises 2 module components. Information on courses will be listed separately for each module component.
- 09-MT4-1-072: S (no information on SWS (weekly contact hours) and course language available)
- 09-MT4-2-072: S (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component 09-MT4-1-072: Quantitative Regional Analysis
- 5 ECTS, Method of grading: numerical grade
- presentation (30 minutes) with written elaboration (approx. 20 pages), weighted 1:1

Assessment in module component 09-MT4-2-072: Qualitative Regional Analysis
- 5 ECTS, Method of grading: numerical grade
- presentation (30 minutes) with written elaboration (approx. 20 pages), weighted 1:1

Contents
Application of empirical research methods on practice-oriented issues on geographical planning and development, development of action-oriented problem solving, presentation of the results.

Intended learning outcomes
Students possess the following skills: Application of empirical survey and analysis methodology concerning regional development planning and regional or spatial development, project work, the ability to work in a team, result-oriented methods, communicative techniques.

Courses
This module comprises 2 module components. Information on courses will be listed separately for each module component.
- 09-MT6-1-072: S (no information on SWS (weekly contact hours) and course language available)
- 09-MT6-2-072: S (no information on SWS (weekly contact hours) and course language available)

Method of assessment
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component 09-MT6-1-072: Methods of Planning in Human Geography 1
- 5 ECTS, Method of grading: numerical grade
- a) presentation (approx. 25 minutes) with written elaboration (approx. 12 pages), weighted 1:1 or b) term paper (approx. 20 pages) or c) several small assessments (total length/expenditure of time comparable to a) and/or b), weighted 1:1

Assessment in module component 09-MT6-2-072: Methods of Planning in Human Geography 2
- 5 ECTS, Method of grading: numerical grade
- a) presentation (approx. 25 minutes) with written elaboration (approx. 12 pages), weighted 1:1 or b) term paper (approx. 20 pages) or c) several small assessments (total length/expenditure of time comparable to a) and/or b), weighted 1:1

**Contents**

Design and analysis of algorithms, recursion vs. iteration, sort and search methods, data structures, abstract data types, lists, trees, graphs, basic graph algorithms, programming in Java.

**Intended learning outcomes**

[Version 1: The students are able to independently design algorithms as well as to precisely describe and analyse them. They are able to apply recursion in algorithms and data structures. The students are familiar with the three basic programming paradigms and are able to apply them in practical programs.]

[Version 2: The students are able to independently design algorithms as well as to precisely describe and analyse them. The students are familiar with the basic paradigms of the design of algorithms and are able to apply them in practical programs. The students are able to estimate the run-time behaviour of algorithms and to prove their correctness.]

**Contents**

[Version 1: Paths, cycles and components, colouring and matching, transitive hull and irreducible kernel, trees, forests and matroids, depth first search, breadth first search, shortest paths, flows and streams, matchings, network design and routing, planar graphs, graph transformations]

[Version 2: On the one hand, we handle typical graph problems: we solve round trip problems, calculate maximal flows, find matchings and colourings, work with planar graphs and find out how the ranking algorithm of Google works. On the other hand, we become familiar with new concepts, using the examples of graph problems, for example how we model problems as linear programs or how we show that they are fixed parameter computable.]

**Intended learning outcomes**

[Version 1: The students master the following topics: the most important graph theoretical concepts and algorithms: paths, cycles and components, colourings and matching, transitive hull and irreducible kernel, trees, forests, matroids, depth first search, breadth first search, shortest path, flows and streams, matchings, network design and routing, planar graphs, graph transformations.]

[Version 2: The students are able to model typical problems of computer science as graph problems. In addition, the participants are able to decide which tool from the lecture helps solve a given graph problem algorithmically. In this course, students learn in detail how to estimate the run time of given graph algorithms.]

</table>

**Duration**
1 semester

**Module level**
undergraduate

**Other prerequisites**
--

**Contents**
Polymorphism, generic programming, meta programming, web programming, templates, document management.

**Intended learning outcomes**
The students are proficient in the different paradigms of object-oriented programming and have experience in their practical use.

**Courses**
V + Ü (no information on SWS (weekly contact hours) and course language available)

**Method of assessment**
written examination (50 minutes) or oral examination (one candidate each: 15 minutes, groups of 2: 20 minutes, groups of 3: 25 minutes)

**Allocation of places**
--

**Additional information**
--

**Referred to in LPO I**
(examination regulations for teaching-degree programmes)

### Contents
Completion of a project assignment in groups, problem analysis, creation of requirements specifications, specification of solution components (e.g. UML) and milestones, user manual, programming documentation, presentation and delivery of the runnable software product in a colloquium.

### Intended learning outcomes
The students possess the practical skills for the design, development and execution of a software project in small teams.

### Courses
(type, number of weekly contact hours, language — if other than German)

P (no information on SWS (weekly contact hours) and course language available)

### Method of assessment
(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Periodic presentations on project progress with regard to detailing problem specifications, the corresponding solution components (software) and the documentation of these; if project is completed in groups, proof of contributions made by the individual student required; software and project documentation as specified in assignment, final presentation (10 to 15 minutes per group)

### Allocation of places

Module title
Knowledge management systems and data mining

Abbreviation
10-I-WMS-072-m01

Module coordinator
holder of the Chair of Computer Science VI

Module offered by
Institute of Computer Science

ECTS
10

Method of grading
numerical grade

Duration
1 semester

Module level
undergraduate

Other prerequisites
--

Contents
[Version 1: Foundations in the following areas: process and product-oriented knowledge management systems, basic knowledge representation and inference (rules, objects, constraints, probabilistic, non-monotonous, temporal closures), problem classes and solution methods (diagnostic, construction, simulation), knowledge acquisition and process models, data mining (data warehouse and OLAP, data preprocessing, data visualisation), learning algorithms with data mining (learning of decidability trees, rules, subgroups, clusters), semantic web.]

[Version 2: Foundations in the following areas: process and product-oriented knowledge management systems, basic knowledge representation and inference (rules, objects, constraints, probabilistic, non-monotonous, temporal closure), solution methods (diagnostic, construction), knowledge acquisition and process models, semantic web.]

Intended learning outcomes
The students possess the theoretical and practical knowledge necessary to understand and develop knowledge management systems and data mining systems including knowledge formalisation. The students also have acquired experience in a small project.

Courses
V + Ü + Ü (no information on SWS (weekly contact hours) and course language available)

Method of assessment
written examination (80 minutes) or oral examination (one candidate each: 20 minutes, groups of 2: 30 minutes, groups of 3: 40 minutes)

Allocation of places

**Contents**

Introduction to the theory of intellectual disciplines; philosophical bases of the humanities and the social sciences; philosophical bases of the natural sciences and engineering.

**Intended learning outcomes**

Intended learning outcomes: Content-related outcomes: - insight into the relationship of philosophy to individual intellectual disciplines - ability to reflect on the historical and intellectual origins of our knowledge culture - ability to organise topics into overarching historical, social, and political schemata - insight into the scope and limits of various intellectual disciplines - knowledge of, and ability to criticise, basic assumptions in systems of thought, culture, and knowledge Formal outcomes (skills to be tested in assessments): - ability to analyse philosophical texts and issues - ability to organise concepts and philosophical positions into overarching intellectual schemata - ability to present philosophical positions in a structured and linguistically appropriate manner

**Courses** (type, number of weekly contact hours, language — if other than German)

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 06-B-P2-1-072: S (no information on SWS (weekly contact hours) and course language available)
- 06-B-P2-2-072: S (no information on SWS (weekly contact hours) and course language available)

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 06-B-P2-1-072**: Philosophical principles of arts and humanities

- 5 ECTS, Method of grading: numerical grade
- written examination (approx. 120 minutes)

**Assessment in module component 06-B-P2-2-072**: Philosophical principles of natural sciences and technology

- 5 ECTS, Method of grading: numerical grade
- written examination (approx. 120 minutes)

**Contents**

Modern philosophical texts.

**Intended learning outcomes**

Intended learning outcomes: Content-related outcomes: - ability to analyse texts of modern philosophy - knowledge of, and ability to criticise, basic assumptions of systems of thought, culture, and knowledge of modernity Formal outcomes (skills to be tested in the assessment): - ability to analyse philosophical texts and issues - ability to follow the rules of scholarly work - ability to independently develop philosophical issues and to present them in a linguistically appropriate manner

**Courses** (type, number of weekly contact hours, language — if other than German)

S (no information on SWS (weekly contact hours) and course language available)

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

term paper (approx. 12 pages)

**Allocation of places**

</tr>
</tbody>
</table>

**Contents**

Physical laws of mechanics, thermodynamics, optics, science of electricity, vibration and waves, Atomic and Nuclear Physics and wave optics. Basic measuring methods using computers and storage oscilloscopes.

**Intended learning outcomes**

The students have knowledge and skills of physical measuring instruments and experimental techniques. They are able to independently plan and conduct experiments in cooperation with others, and to document the results in a measurement protocol.

**Courses**

- Beispiele aus Mechanik, Wärmelehre und Elektri (Examples from Mechanics, Thermodynamics and Electricity, BAM): P (2 weekly contact hours)
- Klassische Physik (Classical Physics, KLP): P (2 weekly contact hours)
- Elektrizitätstelehre und Schaltungen (Electricity and Circuits, ELS): P (2 weekly contact hours)
- Wellenoptik (Physical Optics, WOP): P (2 weekly contact hours)
- Atom- und Kernphysik (Atomic and Nuclear Physics, AKP): P (2 weekly contact hours)
- Computer und Messtechnik (Computers and Measurement Technology, CMT): P (2 weekly contact hours)

**Method of assessment**

This module has the following assessment components

1. Lab course in part 1: a) Preparing, performing and evaluating the experiments will be considered successfully completed if a Testat (exam) is passed. b) Talk (with discussion) to test the students' understanding of the physics-related contents of the course (approx. 30 minutes).
2. Lab course in part 2: a) Preparing, performing and evaluating the experiments will be considered successfully completed if a Testat (exam) is passed. b) Talk (with discussion) to test the students' understanding of the physics-related contents of the course (approx. 30 minutes).

Students must register for assessment components 1 and 2 online (registration deadline to be announced). Students will be offered one opportunity to retake element a) and/or element b). To pass an assessment component, they must pass both elements a) and b).

To pass this module, students must successfully complete two out of the six courses. Students must attend BAM, KLP or ELS courses prior to attending WOP, AKP or CMT courses.

To pass this module, students must pass both assessment component 1 and assessment component 2.

Contents

Content:
This course offers an introduction to aims and methods of managerial accounting (cost accounting).

Outline of syllabus:
1. Managerial accounting and financial accounting
2. Managerial accounting: basic terms
3. Different types of costs
4. Cost centre accounting based on total costs
5. Job costing based on total costs
6. Cost centre accounting and job costing based on direct/variable costs
7. Budgeting and cost-variance analysis
8. Cost-volume-profit analysis
9. Cost information and operating decisions

Reading:
Friedl/Hofmann/Pedell: Kostenrechnung. Eine entscheidungsorientierte Einführung.
(most recent editions)

Intended learning outcomes

After completing the course "Management Accounting and Control", the students will be able to
(i) set out the responsibilities of the company's internal accounting and control;
(ii) define the central concepts of internal enterprise computing restriction and control and assign case studies
the terms;
(iii) apply the basic methods of internal corporate accounting and control on a full and cost base to idealized ca-
se studies of medium difficulty that calculate relevant costs and benefits and take on this basis a reasoned deci-
sion.

**Contents**

This course offers an introduction to the fundamentals of financial accounting, including the technique of double-entry book-keeping as well as the fundamentals of recognition, valuation and presentation of assets, liabilities and equity according to German commercial law.

**Intended learning outcomes**

Students acquire a basic understanding of the fundamentals of financial accounting. They are able to arrange, reproduce and apply this knowledge, i.e. they are able to solve simple accounting problems.

**Contents**

This course will introduce students to relevant subject areas of business administration. Students will acquire an overview of the different perspectives and main points of view from which a theoretical examination of business enterprise may take place. The course will focus on what companies or other organisations are, how they behave and in what form they are organised. For this purpose, a study will be made of the economic subject's decision-making behaviour.

Reading list to be provided during lecture.

**Intended learning outcomes**

The aim of the lectures is to familiarise the students with the basic problem issues and perspectives within the field of business administration.

**Courses** (type, number of weekly contact hours, language — if other than German)

**Contents**

The course deals with the following topics:
1. Economics shows how markets function
2. The division of labour is the basis of our wealth
3. The market in action
4. Monopolies and cartels endanger market economies
5. The labour market and the role of unions
6. The government's role in a social market economy
7. Governmental redistribution guarantees the social balance in a market economy
8. Environmental policy and the government's allocation function
9. Objectives and agents in the macro economy
10. How do aggregate supply and demand come into equilibrium?
11. The role of fiscal policy
12. How does a central bank stabilise aggregate demand by setting interest rates?

**Intended learning outcomes**

By completing this course, students receive a fundamental understanding of economics. Students are able to grasp microeconomic as well as macroeconomic subjects and to analyze them in theoretical models.

**Courses** (type, number of weekly contact hours, language — if other than German)

V + Ü (no information on SWS (weekly contact hours) and course language available)

### Contents

**Description:**
This module covers basic macroeconomic relationships, the declaration of employment, production, interest, current and capital account, nominal and real exchange rate, prices and inflation - in the long run (with flexible wages and prices) and in the short term (with fixed wages and prices). The course will familiarise students with concepts which are of central importance in a globalised environment (e.g. interest rate arbitrage, foreign exchange risk, purchasing power parity). The explanations will be applied to current issues (e.g. current account balances in the global economy; questions related to the European monetary union and the global financial crisis).

**Outline of syllabus:**
1. Macroeconomic issues and characteristics
   - Issues of macroeconomics
   - The measurement of economic activity
2. Long-term relationships
   - The classic long-term model of the closed economy
   - Money and Inflation
   - The classic long-term model of a small open economy
   - Unemployment
3. Short and medium-term relationships
   - Fluctuations of economic activity: an introduction
   - The IS-LM model of a closed economy
   - The IS-LM model of an open economy
   - Aggregate supply and Phillips curve
   - Conclusion and outlook

**Reading:**
The latest editions of the following textbooks:
N. Gregory Mankiw: Macroeconomics [students are recommended to read the original English edition; they may also read the German translation]
Olivier Blanchard and David H. Johnson, Macroeconomics Prentice Hall; [a German-language edition of the book by Oliver Blanchard and Gerhard Illing is available from Pearson Studium].
Michael Burda and Charles Wyplosz: Macroeconomics. A European text.
To illustrate the lecture, case studies in particular will be developed in which more current sources are used.

**Intended learning outcomes:**
This expertise enables the students to penetrate economically-intuitively and analytically macroeconomic interactions and problems in the course of advancing globalization and to deal with these arguments. Students learn to interpret on a scientific basis the impact of macroeconomic developments in individual economic actors (businesses, households, the state).

### Contents

The lecture covers the following topics

Theory of the household:
1. Utility maximisation under constraints
2. Comparative statics
3. Income and substitution effects
4. Labour supply
5. Intertemporal consumption / savings decisions

Theory of the firm:
6. Production functions (technology)
7. Profit maximisation
8. Long run versus short run cost minimisation
9. Supply of goods

### Intended learning outcomes

Students are systematically trained in microeconomic methods relevant in household and firm theory. Accordingly, they will know how to solve optimization problems under constraints. These scientific methods will serve as useful in many fields of specialization in economics and business administration. In particular, students know analytically how to analyze the impact of changes in the economic environment, e.g., wages, interest rates, income on individual decision making.

Description

In this module, students will acquire the theoretical foundations of market-oriented management.

Content:

With the stakeholder approach as a starting point, the basic design of market-oriented management will be explained and exemplified in the 5 classical steps: situation analysis, objectives, strategies, tools and controlling. The course will focus not only on the behavioural approaches of consumer behaviour but also on industrial purchasing behaviour. A case study introducing students to the fundamental principles of market research based on a conjoint analysis will provide students with deeper insights into the topic.

Outline of syllabus:

1. Marketing, entrepreneurship and business management
2. Explanations of consumer behaviour
3. Fundamentals of market research
4. Strategic marketing; marketing tools
5. Corporate social responsibility versus creating shared value

Reading:

Intended learning outcomes

The students have a basic understanding of business management and are able to classify the knowledge systematically. In addition, they can use the acquired knowledge solve and identify the conventional problem fields of business management.

### Contents

Content:
This course offers an introduction to principles of financial mathematics, several methods of capital budgeting and principles of financial economics.

Outline of syllabus:
1. Principles of financial mathematics
2. Fundamental concepts
3. Problems of investment and finance in one commodity world under certainty
4. Problems of investment and finance in one commodity world under uncertainty
5. Problems of investment and finance in many commodities world under uncertainty
6. Capital market and corporate financing in Germany

### Intended learning outcomes

After completing the course "Principles of Investments and Finance", the students will be able
(i) to understand the fundamentals in financial mathematics and solve several problems, e.g. via the PV approach;
(ii) to address the central problems in intertemporal allocation given different capital market scenarios;
(iii) to budget and calculate the optimal useful life given static and dynamic investment approaches under the consideration of several other investment opportunities and the capital market scenario, especially the influence of taxes.

### Contents

**Description:**
The lecture provides an introduction to long run or dynamic issues of macroeconomic theory and policy.

**Contents:**
1. Phillips curve and dynamic model
2. Growth theory and policy
3. Microeconomic foundations of macroeconomics
4. Macroeconomic policy

Lecture notes to be provided by Chair.

### Intended learning outcomes

After completing the course "Makroökonomie 2" students are familiar with the most important concepts of growth theory, they know the microeconomic foundations of modern macroeconomic theory and understand the intertemporal budget constraint of the government. Therefore they are able to discuss the growth and distributional consequences of policy reforms by applying simple economic models.

**Duration**

1 semester

**Module level**

undergraduate

**Other prerequisites**

--

**Contents**

Outline of syllabus:

1. Cost minimisation
2. Profit maximisation and the supply function
3. Short-run market equilibrium
4. Long-run market equilibrium
5. Government interventions
6. Monopoly
7. Pricing strategies with market power
8. Introduction to game theory
9. Strategic interaction and oligopoly

**Intended learning outcomes**

The aim of the course is to understand how markets work. We will investigate the behavior of a company in different market structures; namely perfectly competitive markets, monopoly markets and all forms in between, the so-called oligopoly markets. Ultimately, we are interested in whether the market results from a social point of view is desirable. Using our models, we will also try to analyze the consequences of different government interventions. The knowledge that students gain in this course will be in their future course of studies of benefits to them. In almost all business and economics lectures markets play a role. It also discussed in detail how economic actors make their decisions. Students will thus learn the important building blocks of economic thought. This knowledge will also be useful in the workplace and even in their private lives.

Module title: Introduction to Economic Policy

Abbreviation: 12-WiPo-G-072-m01

Module coordinator: holder of the Chair of Economic Order and Social Policy

Module offered by: Faculty of Business Management and Economics

ECTS: 5

Method of grading: numerical grade

Duration: 1 semester

Module level: undergraduate

Other prerequisites: --

Contents:

Description:
The course consists of six chapters. The first chapter illustrates what economists have in mind when referring to the term "economic policy" and discusses its objectives, means and institutions. The following chapters deal with the objectives that are set out in the German "Gesetz zur Förderung der Stabilität und des Wachstums der Wirtschaft" ("Law for Promoting Stability and Growth of the Economy") of 1967. Each chapter uses current macroeconomic data to evaluate the degree to which the particular objective is achieved, discusses the reasons of possible problems and demonstrates actions the government may take to cure the problems.

Outline of syllabus:
1. Introduction
   - What is "Economic Policy"?
   - Objectives of economic policy
   - Instruments of economic policy
   - Institutions of economic policy
2. Full employment
   - Empirics: The status quo of the labour market
   - Reasons for unemployment
   - Cure for labour market problems
3. Price level stability
   - Empirics: Inflation, deflation or price stability?
   - Reasons for inflation and deflation
   - Cure for price instability
   - The contradicting relationship between full employment and stable prices
4. Business cycles and economic growth
   - Empirics: current situation of the world economy and long-term economic growth
   - Reasons for cyclical fluctuations and determinants of economic growth
   - Cure for macroeconomic instabilities and means to facilitate economic growth
5. Balance in foreign trade
   - Empirics: balances of payments of Germany, Europe and the world
   - Reasons for macroeconomic imbalances
   - Cure for instabilities in foreign trade
6. Income distribution
   - Empirics: the distribution of incomes and its historical development
   - Reasons for an increase in income inequality
   - Cure for inequality and redistribution

Intended learning outcomes:
The students gain a basic understanding of the role of the state in national and international economies. Based on a number of macroeconomic models (AS/AD, IS/LM, phillips curve, labor market equilibria, Solow model, Beveridge curve, etc.), students study the ability of the state to influence national and global economies. Students learn to assess in which situations such influence can be welfare-enhancing and under which circumstances governmental interventions may be harmful. After successful completion of the course, students are able to analyze concrete economic situations and to develop policy options of the state. In addition, students have learned to...
assess the situation of a country on the basis of empirical macroeconomic data and to explain the particular problems based on different models.

| Courses (type, number of weekly contact hours, language — if other than German) |
| V + Ü (no information on SWS (weekly contact hours) and course language available) |

| Method of assessment (type, scope, language — if other than German, examination offered — If not every semester, information on whether module is creditable for bonus) |
| written examination (approx. 60 minutes) |

### Contents

Independently researching and writing on a topic in mathematics selected in consultation with the supervisor.

### Intended learning outcomes

The student is able to work independently on a given mathematical topic and apply the skills and methods obtained during his/her studies in the bachelor programme. He/She can write down the result of his/her work in a suitable form.

### Courses

- no courses assigned

### Method of assessment

- written thesis
- Language of assessment: German, English if agreed upon with the examiner

### Allocation of places

Content:
Introduction to the basic techniques in mathematics; approach to sets, propositions, propositional logic.

Intended learning outcomes:
The student gets acquainted with the basic working techniques which are prerequisites for the further courses in the Bachelor’s degree study programme.

Courses (type, number of weekly contact hours, language — if other than German)
V + T (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)
completion of project assignments (to be specified at the beginning of the course)

### Duration
1 semester

**Module level**
undergraduate

**Other prerequisites**
--

### Contents
Basics of a modern programming language (e. g. C or Fortran) taking into account the particular needs in mathematics.

### Intended learning outcomes
The student is able to work independently on small programming exercises and standard programming problems in mathematics.

### Courses
P (no information on SWS (weekly contact hours) and course language available)

### Method of assessment
project in the form of programming exercises (expenditure of time as specified at the beginning of the course)

### Allocation of places

**Contents**

Introduction to modern mathematical software for symbic computation (e. g. Mathematica or Maple) and numerical computation (e. g. Matlab) to supplement the basic modules in analysis and linear algebra (10-M-ANA and 10-M-LNA). Computer-based solution of problems in linear algebra, geometry, analysis, in particular differential and integral calculus; visualisation of functions.

**Intended learning outcomes**

The student learns the use of advanced modern mathematical software packages, and is able to assess their fields of application to solve mathematical problems.

**Contents**

The student prepares a scientific talk on the topic and results of his/her Bachelor's thesis and answers questions on his/her talk.

**Intended learning outcomes**

The student is able to prepare a presentation of his/her own scientific work. He/She is able to give a short and concise talk on his/her own scientific work, participate in a scientific debate and question the scientific activities of others.

**Courses** (type, number of weekly contact hours, language — if other than German)

A (no information on SWS (weekly contact hours) and course language available)

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Talk (approx. 15 minutes) with subsequent discussion (approx. 15 minutes)

**Allocation of places**
