Content and Objectives of the Programme

The bachelor's course of Biomedicine is provided by the Faculty of Medicine and the Faculty of Biology of the JMU as a course with a focus on basic research and a Bachelor of Science (B.Sc) degree. It is part of a consecutive bachelor and master program.

The object of this course is on the one hand to convey medical and scientific knowledge of the whole scope of medicine. On the other hand the students are prepared to use modern methods of molecular biology. In the process of studying the students acquire the necessary expertise and the abilities to conduct research. With a thesis the students prove their ability to process and represent a biomedical problem largely independent with a definite deadline and predetermined scientific methods.
Abbreviations used

Course types: **E** = field trip, **K** = colloquium, **O** = conversatorium, **P** = placement/lab course, **R** = project, **S** = seminar, **T** = tutorial, **Ü** = exercise, **V** = lecture

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B/NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programs), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: **A** = thesis, **LV** = course(s), **PL** = assessment(s), **TN** = participants, **VL** = prerequisite(s)

Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

In accordance with

the general regulations governing the degree subject described in this module catalogue:

**ASPO2009**

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

**1-Dec-2011 (2011-108)**

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

### Contents

In this module, students will acquire theoretical and practical background knowledge on animal developmental biology. The following topics will be covered: early embryonic development of various model organisms (amphibians, nematodes, Drosophila, mouse) and relevance for the systematics of animals, gametogenesis (production of spermatozoa and ova), differential gene expression, cell growth and molecular regulation of cell development, organogenesis, pattern formation, carcinogenesis, stem cell research and cloning, metamorphosis (amphibians, insects), eco-devo, evo-devo.

### Intended learning outcomes

Module title: Biology I - From Cells to Organisms
Abbreviation: 07-1A1ZO-BM-102-m01

Module coordinator: Dean of Studies Biologie (Biology)
Module offered by: Faculty of Biology

ECTS: 8
Method of grading: numerical grade
Duration: 1 semester
Module level: undergraduate

Contents:
The first part of the course will acquaint students with the elementary building blocks of life as well as biological categories. Building on this knowledge, the course will then discuss the cell, the smallest unit of life, starting with its macroscopic structure before moving on to its microscopic structure. The course will point out differences and similarities between prokaryotic cells (bacteria, archaeabacteria) and eukaryotic cells (animals, plants). The second part will address one of the central issues of biology: evolution. Fundamental mechanisms and hypotheses will be discussed and students will be introduced to major phylogenetic reconstruction methods. Using the examples of plants and animals, the subsequent module components will introduce students to the phylogenetic diversity of eukaryotes. At the level of groups in the plant and animal kingdoms, students will acquire the fundamental knowledge necessary to understand the forms and functions of animal and plant organisms, with morphology and cytology being discussed in an evolutionary and ecological context. The contents of the module are relevant for biological disciplines at all levels of biological organisation.

Intended learning outcomes:
- Knowledge of the structures of prokaryotic and eukaryotic cells and their (biological) macromolecules.
- Knowledge of the specific characteristics of the intracellular and extracellular structures of prokaryotes as well as animal and plant cells.
- Ability to recognise evolution as the driving force behind the phylogeny of species.
- Familiarity with the concepts of phylogenetic relationships between plants/animals.
- Familiarity with the distinguishing characteristics and major representatives of groups in the plant and animal kingdoms.
- Ability to select those plant and animal organisms that are most suitable for particular scientific issues.

Method of assessment:
The course has the following 4 assessment components. Unless stated otherwise, students must pass all of these assessment components to pass the module as a whole.

Assessment in module component 07-1A1ZO-4T-072: Das Tierreich (The Animal Kingdom)
- 4 ECTS credits, numerical grading
- written examination (approx. 60 minutes)
- Additional prerequisites: admission prerequisite to assessment: regular attendance of and participation in exercises as well as successful completion of the respective exercises as specified at the beginning of the course.

Assessment in module component 07-1A1ZO-NF-1Z-082: Die Zelle für das Nebenfach Biologie (The Cell for Biology Minors)
- 1 ECTS credit, numerical grading
- written examination (approx. 60 minutes) including multiple choice questions

Assessment in module component 07-1A1ZO-2E-BM-102: Evolution
- 1 ECTS credit, pass / fail
• written examination (approx. 30 minutes) including multiple choice questions

Assessment in module component 07-1A1ZO-3P-BM-092: Das Pflanzenreich (The Plant Kingdom)
• 2 ECTS credits, numerical grading
• written examination (approx. 60 minutes)

Contents

This module will acquaint students with the principles of the general and comparative physiology of organisms and will provide them with an opportunity to develop the fundamental skills for working in a physiological laboratory. The module will first address the biochemistry of the cell and will then move on to discuss prokaryotic metabolic diversity. Subsequently, the module will discuss the physiological processes that regulate the internal environment of multicellular organisms such as plants and animals.

Intended learning outcomes

Students have developed an understanding of the physiological functions and regulation of organisms. They have acquired fundamental knowledge on planning, setup, interpretation and presentation of scientific results.

Courses (type, number of weekly contact hours, language — if other than German)

This module comprises 6 module components. Information on courses will be listed separately for each module component.

- 07-2A2PH-3TI-072: V + Ü (no information on SWS (weekly contact hours) and course language available)
- 07-2A2PH-1PR-BM-092: V (no information on SWS (weekly contact hours) and course language available)
- 07-2A2PH2PF-BM-092: V (no information on SWS (weekly contact hours) and course language available)
- 07-2A2GNV-1G-BM-092: V (no information on SWS (weekly contact hours) and course language available)
- 07-2A2GNV-2N-BM-092: V (no information on SWS (weekly contact hours) and course language available)
- 07-2A2GNV-3V-BM-092: V (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component 07-2A2PH-3TI-072: Animal Physiology

- 3 ECTS, Method of grading: numerical grade
- written examination (approx. 60 minutes, word problems and/or multiple choice questions)
- Other prerequisites: Admission prerequisite to assessment: regular attendance of exercises and successful completion of the respective exercises as specified at the beginning of the course.

Assessment in module component 07-2A2PH-1PR-BM-092: Basic Physiology of Prokaryotes

- 1 ECTS, Method of grading: numerical grade
- written examination (approx. 60 minutes) including multiple choice questions

Assessment in module component 07-2A2PH2PF-BM-092: Plant Physiology

- 1 ECTS, Method of grading: numerical grade
- written examination (approx. 45 minutes)

Assessment in module component 07-2A2GNV-1G-BM-092: Basic Genetics

- 1 ECTS, Method of grading: numerical grade
- written examination (approx. 30 minutes)

Assessment in module component 07-2A2GNV-2N-BM-092: Basic Neurobiology

- 1 ECTS, Method of grading: numerical grade
- written examination (approx. 30 minutes)

Assessment in module component 07-2A2GNV-3V-BM-092: Behavioural Biology
- 1 ECTS, Method of grading: numerical grade
- written examination (approx. 30 minutes, word problems and/or multiple choice questions)

**Contents**

This module discusses the fundamental principles of both inorganic and organic chemistry. The lab course gives students the opportunity to learn essential methods and perform simple experiments.

**Intended learning outcomes**

Students are able to explain the principles of the periodic table and to extract information from it. They are able to explain basic models of the structure of matter. They have developed the ability to use the language of chemical formulas to describe chemical reactions and to interpret them by identifying the type of reaction. They are able to identify fundamental problems in chemistry and perform experiments to solve them.

**Courses** (type, number of weekly contact hours, language — if other than German)

This module comprises 3 module components. Information on courses will be listed separately for each module component.

- **08-AC-NF-1-102**: V (no information on SWS (weekly contact hours) and course language available)
- **08-IOC-1-102**: V (no information on SWS (weekly contact hours) and course language available)
- **08-CH-BMP-1-102**: P (no information on SWS (weekly contact hours) and course language available)

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 08-AC-NF-1-102**: Introduction to Inorganic Chemistry for Students of Biology, Medicine and Dentistry

- 3 ECTS, Method of grading: numerical grade
- written examination (approx. 60 minutes)

**Assessment in module component 08-IOC-1-102**: Organic Chemistry for students of medicine, biomedicine, dental medicine, engineering and natural science

- 3 ECTS, Method of grading: numerical grade
- written examination (approx. 60 minutes)

**Assessment in module component 08-CH-BMP-1-102**: Practical chemistry course for students of biomedicine

- 2 ECTS, Method of grading: (not) successfully completed
- pre/post-experiment examination talks (Vor-/Nachtestate, approx. 15 minutes each), log (approx. 2 to 5 pages)
- Assessment offered: once a year, summer semester
- Only after successful completion of module components: Successful completion of module component 08-AC-NF-1 or 08-IOC-1 is a prerequisite for participation in module component 08-CH-BMP-1.

**Allocation of places**

Information on the allocation of places will be listed separately for each module component.

- 08-CH-BMP-1-102: --
- 08-AC-NF-1-102: Only as part of pool of general key skills (ASQ): 15 places. Places will be allocated by lot.
- 08-IOC-1-102: Only as part of pool of general key skills (ASQ): 15 places. Places will be allocated by lot.

Modules Mathematics/Statistics
(5 ECTS credits)
Module title: Statistics for students of natural sciences and biomedicine
Abbreviation: 10-M-STAB-111-m01

Module coordinator: Dean of Studies Mathematik (Mathematics)
Module offered by: Institute of Mathematics

ECTS: 5
Method of grading: numerical grade
Only after succ. compl. of module(s): --

Duration: 1 semester
Module level: undergraduate
Other prerequisites: Registration for the exercise must be made via SB@home at the beginning of the course or as announced by the lecturer in accordance with the specified registration deadlines. Certain prerequisites must be met to qualify for admission to assessment (e.g. successful completion of a certain percentage of exercises). The lecturer will inform students about the respective details at the beginning of the course. Registration for the exercise will be considered a declaration of will to seek admission to assessment. If students have obtained the qualification for admission to assessment over the course of the semester, the lecturer will put their registration for assessment into effect. Students who meet all prerequisites will be admitted to assessment in the current or in the subsequent semester. For assessment at a later date, students will have to obtain the qualification for admission to assessment anew and have to register anew, too.

Contents

Intended learning outcomes
The student is able to utilise basic statistical methods for the evaluation of data and interpret the results.

Courses
V + Ü (no information on SWS (weekly contact hours) and course language available)

Method of assessment
written examination (90 to 120 minutes)
Language of assessment: German, English if agreed upon with the examiner

**Contents**

Enhanced insight into functional biochemical and molecular biological relationships. Examples of the molecular control of cell and organ functions. Application of molecular biology and genetic engineering methods to investigate cellular parameters such as gene expression patterns, protein expression or growth and apoptosis. Review of current literature on selected topics.

**Intended learning outcomes**

Students gain an advanced knowledge of functional biochemistry and molecular biology. They develop an understanding of the driving forces of normal and misguided cell functions and acquire practical routine in circumscribed experiments. Students gain an insight into the critical interpretation of experimental data.

**Courses**

(V + S + Ü (no information on SWS (weekly contact hours) and course language available)

**Method of assessment**

a) written examination (approx. 45 minutes) and presentation (approx. 20 minutes) and log (5 to 10 pages) or b) oral examination of one candidate each (approx. 20 minutes) and presentation (approx. 20 minutes) and log (5 to 10 pages) or c) oral examination in groups of up to 3 candidates (approx. 20 minutes per candidate) and presentation (approx. 20 minutes) and log (5 to 10 pages), weighted 2:1:1 (written/oral examination : presentation : log)

Modules Anatomy
(10 ECTS credits)
Module title
Anatomy and Histology

Abbreviation
03-98-ANA-092-m01

Module coordinator
Institute of Anatomy and Cell Biology

Module offered by
Faculty of Medicine

ECTS
10

Method of grading
numerical grade

Only after succ. compl. of module(s)
--

Duration
1 semester

Module level
undergraduate

Other prerequisites
By way of exception, additional prerequisites are listed in the section on assessments.

Contents

Intended learning outcomes
The students are familiar with the foundations of general and special microscopic as well as macroscopic anatomy.

Courses
This module comprises 2 module components. Information on courses will be listed separately for each module component.

- **03-98-ANA-1-092**: S + Ü (no information on SWS (weekly contact hours) and course language available)
- **03-98-ANA-2-092**: S + V + P (no information on SWS (weekly contact hours) and course language available)

Method of assessment
Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 03-98-ANA-1-092**: Anatomy and Cell Biology

- 5 ECTS, Method of grading: numerical grade
- a) written examination (approx. 60 minutes) and presentation (approx. 10 minutes) or b) oral examination of one candidate each (approx. 20 minutes) and presentation (approx. 10 minutes) or c) oral examination in groups of up to 3 candidates (approx. 20 minutes per candidate) and presentation (approx. 10 minutes)
- Assessment offered: once a year, winter semester
- Other prerequisites: Admission prerequisite to assessment: regular attendance of courses (lectures excluded) as specified at the beginning of the course.

**Assessment in module component 03-98-ANA-2-092**: Histology

- 5 ECTS, Method of grading: numerical grade
- a) 2 written examinations (approx. 60 minutes each) or b) oral examination of one candidate each (approx. 20 minutes) and presentation (approx. 10 minutes) or c) oral examination in groups of up to 3 candidates (approx. 20 minutes per candidate) and presentation (approx. 10 minutes)
- Assessment offered: once a year, summer semester
- Other prerequisites: Admission prerequisite to assessment: regular attendance of courses (lectures excluded) as specified at the beginning of the course.

Modules Pharmacology and Toxicology
(7 ECTS credits)
Module title | Abbreviation
---|---
Pharmacology and Toxicology | 03-98-APT-092-m01

Module coordinator | Module offered by
holder of the Chair of Pharmacology and Toxicology | Faculty of Medicine

ECTS | Method of grading | Only after succ. compl. of module(s)
---|---|---
7 | numerical grade | --

Duration | Module level | Other prerequisites
---|---|---
2 semester | undergraduate | Admission prerequisite to assessment: regular attendance of courses (lectures excluded) as specified at the beginning of the course.

Contents

General pharmacology and toxicology, principles of pharmacodynamics and pharmacokinetics, drugs influencing the autonomous and central nervous systems, cardiovascular pharmacology, diuretics, anti-coagulative drugs, drugs affecting the gastrointestinal tract, analgesic drugs, hormonal treatment, drugs used in the treatment of infections and cancer, immune suppressive drugs, toxins, treatment of toxication.

Intended learning outcomes

Students have acquired a fundamental knowledge of general principles in pharmacology and toxicology. They have acquired specific knowledge of each named drug class, their mechanisms of action, basal pharmacokinetic properties and their most relevant side effects.

Courses (type, number of weekly contact hours, language — if other than German)

V + S (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

### Contents

Foundations of virology, microbiology, immunology - part virology: virus families and selected topics; part microbiology: bacteriology, mycology and parasitology; part immunology: tasks, principles and components of the immune system, evolution.

### Intended learning outcomes

The students will be introduced to scientific questions in virology, microbiology and immunology. They will acquire fundamental knowledge in these three subjects.

### Courses

V + V + V (no information on SWS (weekly contact hours) and course language available)

### Method of assessment

- a) written examination (approx. 60 minutes) and presentation (approx. 10 minutes) or
- b) oral examination of one candidate each (approx. 20 minutes) and presentation (approx. 10 minutes) or
- c) oral examination in groups of up to 3 candidates (approx. 20 minutes per candidate) and presentation (approx. 10 minutes)

Modules Advanced Lab Course
(10 ECTS credits)
Module title | Abbreviation
---|---
Project work in research laboratory | 03-98-IPP-092-m01

Module coordinator | Module offered by
Dean of Studies Biomedizin (Biomedicine) | Faculty of Medicine

ECTS | Method of grading | Only after succ. compl. of module(s)
10 | (not) successfully completed | --

Duration | Module level | Other prerequisites
1 semester | undergraduate | Admission prerequisite to assessment: regular attendance of courses (lectures excluded) as specified at the beginning of the course.

Contents
Project work in a research laboratory focusing on training in new methods and the in-depth analysis of a scientific problem. This project may lay the foundation for a subsequent Bachelor's thesis.

Intended learning outcomes
Performing more complex experiments with sequential methods. Students gain an insight into new areas of research based on current literature and knowledge transfer.

Courses (type, number of weekly contact hours, language — if other than German)
R (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)
log (10 to 15 pages) and presentation (approx. 15 minutes)

### Contents

Conduct a defined and focused research project under supervision within a limited time frame.

### Intended learning outcomes

Students demonstrate their ability to solve a defined problem within a chosen area within a given time frame by applying scientific research methods.

### Courses

This module has 2 components; information on courses listed separately for each component.

- 03-98-THK-2-092: K (no information on language and number of weekly contact hours available)
- 03-98-THK-1-092: A (no information on language and number of weekly contact hours available)

### Method of assessment

This module has the following 2 assessment components. Unless stated otherwise, students must pass all of these assessment components to pass the module as a whole.

- **Assessment component to module component 03-98-THK-2-092: Kolloquium**
  - 2 ECTS credits, method of grading: numerical grade
  - oral examination of on candidate each (approx. 20 minutes)

- **Assessment component to module component 03-98-THK-1-092: Bachelorthesis Biomedizin**
  - 10 ECTS credits, method of grading: numerical grade
  - written thesis (20-40 pages)

### Contents

Advances and current results of bioinformatics are explained and discussed, this includes results from genome and sequence analysis, protein domains and protein families, large-scale data analysis (e.g. net generation sequences, proteomics data), analysis of different functional RNAs (e.g. miRNAs, lncRNAs).

### Intended learning outcomes

Understand recent results in bioinformatics. Discuss their implications. Have an advanced (Master) level knowledge of typical technologies and research questions in bioinformatics.

### Courses

V + Ü (no information on SWS (weekly contact hours) and course language available)

### Method of assessment

a) written examination (30 to 60 minutes) and/or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups

**Contents**

Fundamental knowledge and analytical approaches of experimental biomedicine are taught based on selected questions of platelet physiology and megakaryopoiesis. Emphasis is put on the generation and use of antibodies. Transgenic mouse models are used to elucidate the interplay underlying (patho-)physiological processes.

**Intended learning outcomes**

Students have developed the ability to approach, analyse and interpret experimental data obtained with the help of monoclonal antibodies, in particular in the field of platelet physiology. They also have developed skills in experimental design, bench work, data analysis and the interpretation of scientific literature as well as the presentation of scientific results in English.

**Courses**

V + S (no information on SWS (weekly contact hours) and course language available)

**Method of assessment**

Methods of assessment: a) written examination (45 to 60 minutes) or b) log (10 to 20 pages) or c) oral examination of one candidate each (approx. 20 minutes) or d) oral examination in groups of up to 3 candidates (approx. 15 minutes per candidate) or e) presentation (20 to 30 minutes)

### Module title

Introductory Neurobiology for students of biomedicine

### Abbreviation

03-98-PGN-092-m01

### Module coordinator

holder of the Chair of Clinical Neurobiology

### Module offered by

Faculty of Medicine

### ECTS

5

### Method of grading

Only after succ. compl. of module(s)

### Numerical grade

--

### Duration

1 semester

### Module level

undergraduate

### Other prerequisites

Admission prerequisite to assessment: regular attendance of courses (lectures excluded) as specified at the beginning of the course.

### Contents

General fundamentals of neuroanatomy, important methods in neurobiology, diseases of the nervous system: symptoms, diagnosis, therapeutic options, discussion of novel research results.

### Intended learning outcomes

Students who successfully completed this module have acquired a fundamental knowledge about the structure and function of the nervous system. Giving oral presentations, they have developed the ability to critically reflect and discuss current scientific research results in the context of the field of neurobiology.

### Courses

- V + S + Ü (no information on SWS (weekly contact hours) and course language available)

### Method of assessment

- methods of assessment: a) written examination (45 to 60 minutes) or b) log (10 to 20 pages) or c) oral examination of one candidate each (approx. 20 minutes) or d) oral examination in groups of up to 3 candidates (approx. 15 minutes per candidate) or e) presentation (20 to 30 minutes)

**Contents**

How antigen recognition, uptake and presentation by dendritic cells lead to induction of activation markers, transcription factors, cytokines and proliferation of CD4+ T lymphocytes.

**Intended learning outcomes**

The students acquire theoretical and practical knowledge about mechanisms that cells of the innate immune system use to sense pathogens and how this information is translated in the activation of T lymphocytes. They learn fundamental techniques of sterile cell culture, flow cytometry and confocal microscopy analysis techniques and ELISA.

**Courses** (type, number of weekly contact hours, language — if other than German)

### Contents

Part microbiology: fundamental principles of the interaction of bacterial pathogens and multicellular parasites with host organisms; invasion of mammalian cells by intracellular bacteria as well as the regulation and mode of action of bacterial virulence factors; fundamental principles of microbial diagnostics. Part virology: fundamental methods to demonstrate viral infections and to recognise viral pathogenesis using the microscope.

### Intended learning outcomes

Section microbiology: Students will acquire theoretical and practical knowledge on bacterial virulence factors, their regulation and mode of action in the context of infectious disease, including the invasion of eukaryotic host cells by bacterial pathogens and the multiplication and persistence of bacteria within host cells. The students will become familiar with fundamental principles of the cultivation of bacteria and multicellular parasites under laboratory conditions as well as the utilisation of these cultivation systems for the development of novel antiinfectives. The students will become familiar with the principles of microbial diagnostics, including microbial cultivation as well as DNA-based, microscopical, serological and physiological methods of diagnostic differentiation in medical microbiology and hygiene. They will be able to set up experiments and to analyse and interpret data. Section virology: Practical knowledge on the detection of viral infections and pathogenetic alterations following viral infections.

### Contents

The lecture series will cover the pathobiocchemistry and pathophysiology of selected diseases from nephrology, cardiology, endocrinology, pneumology, psychiatry and aspects of clinical molecular biology. The focus is on the biochemical and molecular causes of these diseases and the challenges for respective clinical diagnosis, treatment and translational research.

### Intended learning outcomes

Students gain an understanding of how knowledge of pathobiocchemical and pathophysiological disease processes translates into clinical diagnosis and treatment.

### Courses

### Contents

Becoming familiar with basic cell biological principles via hands-on training and seminars. Major topics are the structural organisation of eukaryotic cells, cell-cell and cell-matrix interactions, proliferation, differentiation and apoptosis.

### Intended learning outcomes

Problem-oriented handling of eukaryotic cells under sterile conditions and understanding of principles of techniques for the analysis of cells. Understanding the molecular basis of cell biology and cellular malfunctions and their significance for disease development. Independent extraction of relevant information and presentation of selected examples of current literature.

Module title: Introduction to methods in experimental biomedicine
Abbreviation: 03-RVZ-092-m01

Module coordinator: holder of the Chair of Experimental Biomedicine
Module offered by: Faculty of Medicine

ECTS: 5
Method of grading: numerical grade
Duration: 1 semester
Module level: undergraduate
Other prerequisites: --

Contents:
Fundamental knowledge and analytical approaches of experimental biomedicine are taught based on selected questions of platelet physiology and megakaryopoiesis. Emphasis is put on the generation and use of antibodies. Transgenic mouse models are used to elucidate the interplay underlying (patho-)physiological processes.

Intended learning outcomes:
Students have developed the ability to approach, analyse and interpret experimental data obtained with the help of monoclonal antibodies, in particular in the field of platelet physiology. They also have developed skills in experimental design, bench work, data analysis and the interpretation of scientific literature as well as the presentation of scientific results in English.

Courses:
V + S (no information on SWS (weekly contact hours) and course language available)

Method of assessment:
methods of assessment: a) written examination (45 to 60 minutes) or b) log (10 to 20 pages) or c) oral examination of one candidate each (approx. 20 minutes) or d) oral examination in groups of up to 3 candidates (approx. 15 minutes per candidate) or e) presentation (20 to 30 minutes)

### Contents
General fundamentals of neuroanatomy, important methods in neurobiology, diseases of the nervous system: symptoms, diagnosis, therapeutic options, discussion of novel research results.

### Intended learning outcomes
Students who successfully completed this module have acquired a fundamental knowledge about the structure and function of the nervous system. Giving oral presentations, they have developed the ability to critically reflect and discuss current scientific research results in the context of the field of neurobiology.

### Courses
(V + S + Ü (no information on SWS (weekly contact hours) and course language available)

**Contents**

**Intended learning outcomes**

The students are familiar with fundamental methods for the development of drugs against helminths. The students are familiar with the principles of helminthology diagnostics as well as helminth genomics/transcriptomics. The students are familiar with the concept of neglected tropical diseases with an emphasis on the African sleeping sickness. They recognise the potential of modern genetic tools for the generation of novel strategies against diseases of poverty caused by parasites.

1 semester | undergraduate | --

Contents
This module will use examples from current research reflecting different topics to provide fundamental biological insights and to also illustrate the fundamental concepts of structural biology. Scientific projects may be selected from the following list: DNA repair, ubiquitin-dependent protein degradation, transport and anchoring of inhibitory neurotransmitter receptors and structure-based design of new pharmaceutical agents.

Intended learning outcomes
Students will gain the ability to solve problems in structural biology on the basis of individually assigned tasks, employing different techniques from the fields of molecular biology, biochemistry and crystallography. They will also acquire skills in the design of experiments, their performance and evaluation as well as in the oral and written presentation of scientific results.

Subject-specific Key Skills

(15 ECTS credits)
Module title: Laboratory Expertise in Biosciences  
Abbreviation: 03-98-FSQ-FACH-092-m01

Module coordinator: holder of the Chair of Molecular Infection Biology and Animal Welfare Officer of the University of Würzburg

Module offered by: Faculty of Medicine

ECTS: 3  
Method of grading: (not) successfully completed

Duration: 1 semester  
Module level: undergraduate

Other prerequisites: --

Contents:

Intended learning outcomes:

The students are familiar with methods of genetic engineering as well as relevant legal provisions regarding genetic engineering safety and biomaterials. They have the expertise to carry out or participate in animal experiments according to the guidelines of FELASA (Cat. B).

Courses (type, number of weekly contact hours, language — if other than German):

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 03-98-FSQ-GEN-1-092: V (no information on SWS (weekly contact hours) and course language available)
- 03-98-FSQ-Tier-1-092: V + P (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus):

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component 03-98-FSQ-GEN-1-092: Genetic Engineering and Biosafety

- 1 ECTS, Method of grading: (not) successfully completed
- written examination (approx. 15 minutes)

Assessment in module component 03-98-FSQ-Tier-1-092: Laboratory animal sciences Laboratory animal sciences

- 2 ECTS, Method of grading: (not) successfully completed
- written examination (approx. 30 to 60 minutes)

### Duration

1 semester

### Module level

undergraduate

### Other prerequisites

By way of exception, additional prerequisites are listed in the section on assessments.

### Contents

Writing scientific texts: definition of topic, development of structure and outline, content production, review of and comment on secondary literature, time management. Scientific ethics: general bioethics, ethics of research involving human subjects, ethical implications of genetic screening.

### Intended learning outcomes

Students acquire fundamental insights into the steps from the generation of scientific data to their publication. They acquire an insight into the ethical implications of research with particular respect to genetic issues and human self-determination.

### Courses

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 03-98-FSQ-EXP-1-092: V (no information on SWS (weekly contact hours) and course language available)
- 03-98-FSQ-ETH-1-092: V (no information on SWS (weekly contact hours) and course language available)

### Method of assessment

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 03-98-FSQ-EXP-1-092: From experiment to publication - how science works**

- 1 ECTS, Method of grading: (not) successfully completed
- preparation of educational materials and materials for demonstrations (approx. 10 pages)
- Other prerequisites: Admission prerequisite to assessment: regular attendance as specified at the beginning of the course.

**Assessment in module component 03-98-FSQ-ETH-1-092: Ethics in Science**

- 1 ECTS, Method of grading: (not) successfully completed
- preparation of educational materials and materials for demonstrations (approx. 10 pages)
- Other prerequisites: Admission prerequisite to assessment: regular attendance as specified at the beginning of the course.

Faculty of Medicine

**ECTS**

2

**Method of grading**

Only after succ. compl. of module(s)

**Duration**

1 semester

**Module level**

undergraduate

**Other prerequisites**

Admission prerequisite to assessment: regular attendance as specified at the beginning of the course. Prior approval by degree programme coordinator required.

**Contents**

Courses offered by the Faculties of Biology or Medicine that contribute to further professional qualification. Recognition (successfully completed/not successfully completed) as assessment to be granted by the module coordinator.

**Intended learning outcomes**

The students have acquired a broader range of knowledge that enables them to enhance their interdisciplinary thinking skills and improve their professional qualification.

**Courses**

V (no information on SWS (weekly contact hours) and course language available)

**Method of assessment**

methods of assessment: a) written examination (45 to 60 minutes) or b) log (10 to 20 pages) or c) oral examination of one candidate each (approx. 20 minutes) or d) oral examination in groups of up to 3 candidates (approx. 15 minutes per candidate) or e) presentation (20 to 30 minutes)

**Allocation of places**

Careers in Science | 03-98-FSQ-KAR-092-m01

Module coordinator | Module offered by
Dean of Studies Biomedizin (Biomedicine) | Faculty of Medicine

ECTS | Method of grading | Only after succ. compl. of module(s)
--- | --- | ---
1 | (not) successfully completed | --

Duration | Module level | Other prerequisites
--- | --- | ---
1 semester | undergraduate | --

Contents
The module outlines ways to plan and pursue an academic career. Information about the various career stages and career paths in science gives an overview of prospects. Different types of funding are discussed as well as examples of selected (women’s) careers in science, also in relation to the reconciliation of work and family commitments.

Intended learning outcomes
The students acquire a fundamental knowledge of the different career paths in science up to professorships at universities in Germany and they are familiar with the respective requirements as well as essential sources of funding.

Courses (type, number of weekly contact hours, language — if other than German)
V (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)
preparation of educational materials and materials for demonstrations (approx. 10 pages)

**Contents**

This module will provide students with advice on how to independently organise their university studies as well as advice on learning strategies, learning techniques and time management. During a lecture series and an expert tutorial in workshop format, students will receive useful advice on exam preparation.

**Intended learning outcomes**

Students acquire learning skills and techniques to help them cope with the demands of their courses and prevent test anxiety by efficiently preparing for exams.

### Module title

| Individual Competences for Science | 03-98-FSQ-NETW-092-m01 |

### Module coordinator

Dean of Studies Biomedizin (Biomedicine)

### Module offered by

Faculty of Medicine

### ECTS

<table>
<thead>
<tr>
<th>Method of grading</th>
<th>Only after succ. compl. of module(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>(not) successfully completed</td>
</tr>
</tbody>
</table>

### Duration

1 semester

### Module level

undergraduate

### Other prerequisites

By way of exception, additional prerequisites are listed in the section on assessments.

### Contents

Identifying and formulating questions that are scientifically approachable, describing and explaining scientific phenomena and interpreting scientific evidence are key competences that are required, in addition to purely technical skills, to answer or solve scientific problems. Based on concrete examples, students interactively practise the respective skills in small groups and present their results.

### Intended learning outcomes

In addition to honing their professional and methodological skills, the students develop and enhance their individual personal and interactive skills.

### Courses

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- **03-98-FSQ-NETW-1-092**: S (no information on SWS (weekly contact hours) and course language available)
- **03-98-FSQ-BEW-1-092**: S (no information on SWS (weekly contact hours) and course language available)

### Method of assessment

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

**Assessment in module component 03-98-FSQ-NETW-1-092**: Personal skills and scientific networking

- 2 ECTS, Method of grading: (not) successfully completed
