Content and Objectives of the Programme 4

Abbreviations used, Conventions, Notes, In accordance with 5

Compulsory Courses 6

Modules Biology 7
   Basics of Biology - From Cells to Organisms 8
   Physiology of Organisms 9
   Genetics and Neurobiology 10
   Developmental Biology of Animals 11

Modules Chemistry 12
   General Chemistry for Students of Biomedicine 13
   Advanced Organic Chemistry for Students of Biomedicine 14

Modules Physics 15
   Introduction to Physics for Students of other Disciplines 16
   Laboratory Course Physics for Students of other Disciplines 17

Modules Mathematics/Statistics 18
   Statistics for Students of natural sciences and biomedicine 19

Modules Biochemistry and Molecular Biology 20
   Basic Biochemistry and Molecular Biology 21
   Advanced Biochemistry and Molecular Biology 22

Modules Anatomy and Pathology 23
   Anatomy and Cell Biology 24
   Histology 25
   General Pathology 26

Modules Physiology 27
   Human Physiology 1 28
   Human Physiology 2 29

Modules Pharmacology and Toxicology 30
   Pharmacology and Toxicology 31

Modules Microbiology, Virology and Immunology 32
   General Microbiology, Virology, Immunology 33

Modules Advanced Lab Course 34
   Project Work in a Research Laboratory 35

Compulsory Electives 36

Compulsory Electives Cell Biology, Genetics and Neurobiology 37
   Cell Biology 38
   Introduction to Genetics and Human Genetics 39
   Introduction to Neurobiology 40
   Introduction to Bioinformatics 41
   Cell Biology - Focus signal transduction and stem cells 42
   Cell Biology - Focus cytoskeleton and microscopic imaging 43
   Cell Biology - Focus immunology 44

Compulsory Electives Microbiology, Virology and Immunology 45
   Practical Course in Immunology and Virology 46
   Practical Course in Molecular Infection Biology 47
   Practical Course in Molecular Bacteriology and Mycology 48
   Practical Course in Parasitology 49

Advanced Compulsory Electives 50
   Practical Course in Pharmacology and Toxicology 51

Content and Objectives of the Programme

The subject Biomedicine is offered by the Faculties of Medicine and Biology at JMU as a fundamental science course with a Bachelor of Science degree (B.Sc., 180 ECTS credits) as part of a consecutive study programme model (B.Sc/M.Sc).

After the successful completion graduates have gained:

- an overview of Sciences, particularly Life Sciences
- deep understanding of the molecular and cellular processes in the human body including disease-driven processes
- the ability to experimentally address biomedical questions
- competencies in solid handling of scientific literature and data, as well as in critical analysis of biomedical content
- presentation and communication
Abbreviations used

Course types: E = field trip, K = colloquium, O = conversatorium, P = placement/lab course, R = project, S = seminar, T = tutorial, Ü = exercise, V = lecture

Term: SS = summer semester, WS = winter semester

Methods of grading: NUM = numerical grade, B/NB = (not) successfully completed

Regulations: (L)ASPO = general academic and examination regulations (for teaching-degree programmes), FSB = subject-specific provisions, SFB = list of modules

Other: A = thesis, LV = course(s), PL = assessment(s), TN = participants, VL = prerequisite(s)

Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

In accordance with

the general regulations governing the degree subject described in this module catalogue:

ASPO2015

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

22-Jul-2015 (2015-35) except for mandatory electives 03-98-PZB1-172, 03-98-PZB2-172, 03-98-PZB3-172, 08-BGV-171 in Fast Track procedure at a later time

24-Nov-2016 (2017-70)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.
Compulsory Courses

(110 ECTS credits)
Modules Biology
(20 ECTS credits)
Module title: Basics of Biology - From Cells to Organisms
Abbreviation: 07-ZEORG-152-m01

Module coordinator: Dean of Studies Biologie (Biology)
Module offered by: Faculty of Biology

ECTS: 7
Method of grading: Only after succ. compl. of module(s)
numerical grade: --

Duration: 1 semester
Module level: undergraduate
Other prerequisites: Admission prerequisite to assessment: exercises. Regular attendance of exercises (minimum 80%) and successful completion of the respective exercises (approx. 25 to 30 hours) are prerequisites for admission to assessment.

Contents:
The first part of the course will acquaint students with the elementary building blocks of life as well as biological categories. Building on this knowledge, the course will then discuss the cell, the smallest unit of life, starting with its macroscopic structure before moving on to its microscopic structure. The course will point out differences and similarities between prokaryotic cells (bacteria, archaeabacteria) and eukaryotic cells (animals, plants). The second part will address one of the central issues of biology: evolution. Fundamental mechanisms and hypotheses will be discussed and students will be introduced to major phylogenetic reconstruction methods. Using the examples of plants and animals, the subsequent module components will introduce students to the phylogenetic diversity of eukaryotes. At the level of groups in the plant and animal kingdoms, students will acquire the fundamental knowledge necessary to understand the forms and functions of animal and plant organisms, with morphology and cytology being discussed in an evolutionary and ecological context. The contents of the module are relevant for biological disciplines at all levels of biological organisation. Students will also acquire and practise some of the fundamental preparation skills bioscientists are often required to possess.

Intended learning outcomes:
Knowledge of the structures of prokaryotic and eukaryotic cells and their (biological) macromolecules. Knowledge of the specific characteristics of the intracellular and extracellular structures of prokaryotes as well as animal and plant cells. Ability to recognise evolution as the driving force behind the phylogeny of species. Familiarity with the concepts of phylogenetic relationships between plants/animals. Familiarity with the distinguishing characteristics and major representatives of groups in the plant and animal kingdoms. Ability to select those plant and animal organisms that are most suitable for particular scientific issues. Familiarity with the components and functioning of microscopes. Fundamental skills in the interpretation of macroscopic and histologic preparations by light microscopy. Fundamental preparation skills.

Courses:
V (1.5) + V (1.5) + V (2) + Ü (3)

Method of assessment:
written examination (approx. 60 minutes)
creditable for bonus

**Contents**

This module will acquaint students with the principles of the general and comparative physiology of organisms and will provide them with an opportunity to develop the fundamental skills for working in a physiological laboratory. The module will first address the biochemistry of the cell and will then move on to discuss prokaryotic metabolic diversity. Subsequently, the module will discuss the physiological processes that regulate the internal environment of multicellular organisms such as plants and animals.

**Intended learning outcomes**

Students have developed an understanding of the physiological functions and regulation of organisms. They have acquired fundamental knowledge on planning, setup, interpretation and presentation of scientific results.

Module title: Developmental Biology of Animals
Abbreviation: 07·3A3EBIOTI-152-m01

Module coordinator: Dean of Studies Biologie (Biology)
Module offered by: Faculty of Biology

ECTS: 4
Method of grading: Only after succ. compl. of module(s)

Duration: 1 semester
Module level: undergraduate
Other prerequisites: Admission prerequisite to assessment: exercises. Regular attendance (minimum 80%) and successful completion of exercises (approx. 25 to 30 hours) are prerequisites for admission to assessment.

Contents:
In this module, students will acquire theoretical and practical background knowledge on animal developmental biology. The following topics will be covered: early embryonic development of various model organisms (amphibians, nematodes, Drosophila, mouse) and relevance for the systematics of animals, gametogenesis (production of spermatozoa and ova), differential gene expression, cell growth and molecular regulation of cell development, organogenesis, pattern formation, carcinogenesis, stem cell research and cloning, metamorphosis (amphibians, insects), eco-devo, evo-devo.

Intended learning outcomes:

Courses (type, number of weekly contact hours, language — if other than German):
V (1) + Ü (3)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus):
written examination (approx. 60 minutes)
creditable for bonus

Allocation of places:

**Contents**

Simple experiments in the fields of mechanics, vibration theory, thermodynamics, optics, X-rays, nuclear magnetic resonance, Atomic and Nuclear Physics, imaging methods.

**Intended learning outcomes**

The students have detected and understood physical contexts on the basis of the implementation of own experiments. They have a basic understanding of physical phenomena and know the basic ideas and ways of functioning of different measuring and imaging methods as well as their applications, especially in the field of Biomedicine.

**Courses** (type, number of weekly contact hours, language — if other than German)

P (4)

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

a) practical assignment with oral test (approx. 15 minutes, during experiments) and b) written examination (90 minutes).

Each experiment comprises preparation, performance and evaluation. Test as well as performance of experiments can each be repeated once.

**Allocation of places**

Only as part of pool of general transferable skills (ASQ): 10 places (lottery)

</table>

**Contents**

Enhanced insight into functional biochemical and molecular biological relationships. Examples of the molecular control of cell and organ functions. Application of molecular biology and genetic engineering methods to investigate cellular parameters such as gene expression patterns, protein expression or growth and apoptosis. Review of current literature on selected topics.

**Intended learning outcomes**

Students gain an advanced knowledge of functional biochemistry and molecular biology. They develop an understanding of the driving forces of normal and misguided cell functions and acquire practical routine in circumscribed experiments. Students gain an insight into the critical interpretation of experimental data.

**Courses** (type, number of weekly contact hours, language — if other than German)

V (4) + S (1) + Ü (6)

Module taught in: German and/or English

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

written examination (60 to 90 minutes).

If announced by the lecturer at the beginning of the course, the written examination may be replaced by an oral examination of one candidate each (20 to 30 minutes) or an oral examination in groups of up to 3 candidates (approx. 20 minutes per candidate).

#### Contents

General and special pathology: pathology of cell damage, classification of inflammation, immunopathology, tumour pathology, examples of important organ diseases.

**Intended learning outcomes**

The students are familiar with the fundamental principles of general pathology and methods of pathology such as morphological, immunohistochemical, cytogenetic and molecular analyses. They have acquired a first insight into the pathogenesis, histopathology, macroscopic pathology and clinicopathologic correlations of cancer, inflammation, metabolic disorders and organ diseases.

**Courses** *(type, number of weekly contact hours, language — if other than German)*

V (3) + P (1)

**Method of assessment** *(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)*

written examination (60 to 90 minutes) and successful completion of practical exercises (ungraded)

**Duration**

undergraduate

**Other prerequisites**

Prior approval from degree programme coordinator required.

**Contents**

Project work in a research laboratory focusing on training in new methods and the in-depth analysis of a scientific problem. This project may lay the foundation for a subsequent Bachelor’s thesis.

**Intended learning outcomes**

Performing more complex experiments with sequential methods. Students gain an insight into new areas of research based on current literature and knowledge transfer.

**Courses**

(type, number of weekly contact hours, language — if other than German)

R (12)

Module taught in: German/English

**Method of assessment**

(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

presentation (20 to 30 minutes) as well as log (10 to 15 pages) or, where applicable, project proposal (approx. 5 pages)

Language of assessment: German or English

Compulsory Electives
(35 ECTS credits)
Compulsory Electives Cell Biology, Genetics and Neurobiology
(10 ECTS credits)
Module title: Cell Biology
Abbreviation: 03-98-PZB-152-m01

Module coordinator: holder of the Chair of Medical Radiation and Cell Research
Module offered by: Faculty of Medicine

ECTS: 5
Method of grading: numerical grade
Only after succ. compl. of module(s)
Duration: undergraduate
Other prerequisites:

Contents:
Becoming familiar with basic cell biological principles via hands-on training and seminars. Major topics are the structural organisation of eukaryotic cells, cell-cell and cell-matrix interactions, proliferation, differentiation and apoptosis.

Intended learning outcomes:
Problem-oriented handling of eukaryotic cells under sterile conditions and understanding of principles of techniques for the analysis of cells. Understanding the molecular basis of cell biology and cellular malfunctions and their significance for disease development. Independent extraction of relevant information and presentation of selected examples of current literature.

Courses:
(type, number of weekly contact hours, language — if other than German)
P (5) + S (1)
Module taught in: German / English

Method of assessment:
(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)
a) written examination (45 to 90 minutes) or b) log (10 to 20 pages) or c) oral examination of one candidate each (20 to 30 minutes) or d) oral examination in groups of up to 3 candidates (approx. 20 minutes per candidate) or e) presentation (20 to 30 minutes).
Students will be informed about the type and length of assessment at the beginning of the course.

### Contents

### Intended learning outcomes

Students will acquire a fundamental knowledge of human, trypanosome and Drosophila genetics as well as molecular genetic diagnostics and genetic counselling. They will develop an advanced knowledge of the genetics of selected diseases.

### Courses

(type, number of weekly contact hours, language — if other than German)

V (2) + Ü (3)

### Method of assessment

(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

written examination (30 to 90 minutes) and successful completion of exercises (ungraded), oral test during experiments (approx. 15 minutes) and written examination (90 minutes).

Each experiment comprises preparation, performance and evaluation. Test as well as performance of experiments can each be repeated once.

Module title: Cell Biology - Focus signal transduction and stem cells
Abbreviation: 03-98-PZB1-172-m01

Module coordinator: holder of the Chair of Medical Radiation and Cell Research
Module offered by: Faculty of Medicine

ECTS: 5
Method of grading: Only after succ. compl. of module(s)
numerical grade: --

Duration: undergraduate
Module level: Other prerequisites
Other prerequisites: May not be combined with 03-98-PZB2 or 03-98-PZB3.

Contents:
Becoming familiar with basic cell biological principles via hands-on training and seminars. Major topics are the structural organisation of eukaryotic cells, isolation of stem cells, analyses of cell-cell and cell-matrix interactions, as well as cell proliferation. Differentiation of stem cells and involved signalling pathways.

Intended learning outcomes:
Problem-oriented handling of eukaryotic cells under sterile conditions and understanding principles of techniques for the analysis of cells. Understanding the molecular basis of cell biology and cellular malfunctions and their significance for the disease development. Independent extraction of relevant information and presentation of selected examples of the current literature. Ability to discuss ethical aspects of stem cell biology.

Courses:
(type, number of weekly contact hours, language — if other than German)
P (5) + S (1)
Module taught in: German / English

Method of assessment:
(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)
a) written examination (45 to 90 minutes) or c) oral examination of one candidate each (20 to 30 minutes).
Students will be informed about the type and length of assessment at the beginning of the course.
Language of assessment: German and/or English

Allocation of places:
Biomedizin (Biomedicine) Bachelor’s: 18 places.

Additional information:

Cell Biology  Focus cytoskeleton and microscopic imaging | 03-98-PZB2-172-m01

Module coordinator | Module offered by
holder of the Chair of Experimental Biomedicine and holder of the Professorship of Molecular Microscopy | Faculty of Medicine

ECTS | Method of grading | Only after succ. compl. of module(s)
---|---|---
5 | numerical grade | --

Duration | Module level | Other prerequisites
---|---|---
module | undergraduate | May not be combined with 03-98-PZB1 or 03-98-PZB3.

Contents
Becoming familiar with basic cell biological principles via hands-on training and seminars. Major topics are the structural organisation, the stability and the dynamics of the cytoskeleton in eukaryotic cells. Biochemical analysis of cytoskeletal components. Complementary imaging using modern microscopic approaches and implementation of the results into the dynamic processes of the cytoskeleton living cells.

Intended learning outcomes
Problem-oriented handling of eukaryotic cells under sterile conditions and understanding principles of techniques for the analysis of the cellular cytoskeleton. Understanding the molecular basis of cell biology and recognising targets for drugs affecting the cytoskeleton. Principles and limitations of classical and modern forms of microscopic imaging for the analysis of the cytoskeleton. Cellular malfunctions and their significance for the disease development. Independent extraction of relevant information and presentation of selected examples of the current literature.

Courses
(type, number of weekly contact hours, language — if other than German)

**Contents**

Becoming familiar with basic cell biological principles via hands-on training. Major topics are: cell culture under sterile conditions; transfection of cells and basics in microscopy. In addition, gene expression analysis at RNA level by quantitative real-time PCR, identification and quantification of proteins by immunological techniques such as FACS, ELISA, Western Blot and histology.

**Intended learning outcomes**

Students learn basic laboratory protocols, such as handling of adherent and non-adherent eukaryotic cells under sterile conditions, and principle techniques to analyse cellular processes. They establish own protocols for processing probes as required, and develop an understanding of the molecular basis of cell biology with a focus on inflammation and immunology.

**Courses** (type, number of weekly contact hours, language — if other than German)

</tr>
</tbody>
</table>

**Duration**

Module level: undergraduate

Other prerequisites: --

**Contents**

Part immunology: how antigen recognition, uptake and presentation by dendritic cells lead to induction of activation markers, transcription factors, cytokines and proliferation of CD4+ T lymphocytes. Part virology: fundamental methods to demonstrate viral infections and to recognise viral pathogenesis using the microscope.

**Intended learning outcomes**

Section immunology: The students acquire theoretical and practical knowledge about mechanisms that cells of the innate immune system use to sense pathogens and how this information is translated in the activation of T lymphocytes. They learn fundamental techniques of sterile cell culture, flow cytometry and confocal microscopy analysis techniques and ELISA. Section virology: Practical knowledge about the detection of viral infections and pathogenetic alterations following viral infections.

**Courses**

(type, number of weekly contact hours, language — if other than German)

P (5) + S (1)

Module taught in: German / English

**Method of assessment**

(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

a) written examination (45 to 90 minutes) or b) log (10 to 20 pages) or c) oral examination of one candidate each (20 to 30 minutes) or d) oral examination in groups of up to 3 candidates (approx. 20 minutes per candidate) or e) presentation (20 to 30 minutes).

Students will be informed about the type and length of assessment at the beginning of the course.

Contents
Fundamental principles of the interaction of bacterial pathogens and multicellular parasites with host organisms; invasion of mammalian cells by intracellular bacteria as well as the regulation and mode of action of bacterial virulence factors; fundamental principles of microbial diagnostics.

Intended learning outcomes
Students will acquire theoretical and practical knowledge on bacterial virulence factors, their regulation and mode of action in the context of infectious disease, including the invasion of eukaryotic host cells by bacterial pathogens and the multiplication and persistence of bacteria within host cells. The students will learn fundamental principles of the cultivation of bacteria and multicellular parasites under laboratory conditions as well as the utilisation of these cultivation systems for the development of novel antinfectives. The students will learn the principles of microbial diagnostics, including microbial cultivation as well as DNA-based, microscopical, serological and physiological methods of diagnostic differentiation.

### Contents

Foundations and analytical approaches of bacterial genetics are taught based on selected questions from molecular microbiology. Genetic processes are analysed with the help of examples of gene transfer. Molecular genetic and functional biochemical pathways are presented using examples from microbiology.

### Intended learning outcomes

Students have developed the ability to approach, analyse and interpret general problems in bacterial genetics based on individually assigned tasks, using techniques of modern molecular biology, microbiology and genetics. They also have developed skills in experimental design, bench work, data analysis and the presentation of scientific results both orally and in writing.

**Contents**

**Intended learning outcomes**

The students are familiar with fundamental methods for the development of drugs against helminths. The students are familiar with the principles of helminthology diagnostics as well as helminth genomics/transcriptomics. The students are familiar with the concept of neglected tropical diseases with an emphasis on the African sleeping sickness. They recognise the potential of modern genetic tools for the generation of novel strategies against diseases of poverty caused by parasites.

**Courses** (type, number of weekly contact hours, language — if other than German)

S (1) + P (5)

Module taught in: German/English

**Method of assessment** (type, scope, language — if other than German, examination offered — If not every semester, information on whether module is creditable for bonus)

Advanced Compulsory Electives
(15 ECTS credits)

Students may also take modules from the areas "Zellbiologie, Genetik und Neurobiologie" ("Cell Biology, Genetics and Neurobiology") and "Infektioologie und Immunologie" ("Infection and Immunity").
Module title: Practical Course in Pharmacology and Toxicology

Abbreviation: 03-98-PPT-152-m01

Module coordinator: holder of the Chair of Pharmacology and Toxicology

Module offered by: Faculty of Medicine

ECTS: 5

Method of grading: numerical grade

Duration: 1 semester

Module level: undergraduate

Other prerequisites: --

Contents:
Fundamental pharmacological and toxicological techniques: membrane preparation, radioligand binding, pharmacology of the heart, cell culture and transfection, assessment of DNA damage by micro adducts, comet-assay etc.

Intended learning outcomes:
At the end of the course, students will be able to perform routine pharmacological and toxicological techniques. They will also be able to perform microscopic analyses of samples, the functional characterisation of selected target proteins and cell toxicity analyses.

Courses (type, number of weekly contact hours, language — if other than German):
P (3) + S (1)

Module taught in: German / English

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus):

Presentation of practical work (approx. 30 minutes) and application (preparing a scientific publication; approx. 1.5 hours), weighted 7:3

Allocation of places:
--

Additional information:
--

Referred to in LPO I (examination regulations for teaching-degree programmes):
--
Module title: Pathophysiology and Pathobiochemistry
Abbreviation: 03-98-PPC-152-m01

Module coordinator:
holder of the Professorship Clinical Biochemistry at the Rudolf Virchow Center for Experimental Biomedicine

Module offered by:
Faculty of Medicine

ECTS: 5
Method of grading: numerical grade
Only after succ. compl. of module(s): --

Duration: 1 semester
Module level: undergraduate
Other prerequisites: --

Contents:
The lecture series will cover the pathobiochemistry and pathophysiology of selected diseases from nephrology, cardiology, endocrinology, pneumology, psychiatry and aspects of clinical molecular biology. The focus is on the biochemical and molecular causes of these diseases and the challenges for respective clinical diagnosis, treatment and translational research.

Intended learning outcomes:
Students gain an understanding of how knowledge of pathobiochemical and pathophysiological disease processes translates into clinical diagnosis and treatment.

Courses:
(type, number of weekly contact hours, language — if other than German)
V (3) + V (1)
Module taught in: German/English

Method of assessment:
(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)
a) written examination (45 to 90 minutes) or b) log (10 to 20 pages) or c) oral examination of one candidate each (20 to 30 minutes) or d) oral examination in groups of up to 3 candidates (approx. 20 minutes per candidate) or e) presentation (20 to 30 minutes).
Students will be informed about the type and length of assessment at the beginning of the course.

Module title: Introduction to Methods in Experimental Biomedicine
Abbreviation: 03-98-RVZ-152-m01

Module coordinator: holder of the Chair of Experimental Biomedicine
Module offered by: Faculty of Medicine

ECTS: 5
Method of grading: numerical grade
Duration: undergraduate

Contents:
Fundamental knowledge and analytical approaches of experimental biomedicine are taught based on selected questions of platelet physiology and megakaryopoiesis. Emphasis is put on the generation and use of antibodies. Transgenic mouse models are used to elucidate the interplay underlying (patho-)physiological processes.

Intended learning outcomes:
Students have developed the ability to approach, analyse and interpret experimental data obtained with the help of monoclonal antibodies, in particular in the field of platelet physiology. They also have developed skills in experimental design, bench work, data analysis and the interpretation of scientific literature as well as the presentation of scientific results in English.

Courses:
P (6)
Module taught in: German/English

Method of assessment:
a) written examination (45 to 90 minutes) or b) log (10 to 20 pages) or c) oral examination of one candidate each (20 to 30 minutes) or d) oral examination in groups of up to 3 candidates (approx. 20 minutes per candidate) or e) presentation (20 to 30 minutes).

Students will be informed about the type and length of assessment at the beginning of the course.

**Contents**

Becoming familiar with basic cell biological principles via hands-on training and seminars. Major topics are the structural organisation of eukaryotic cells, isolation of stem cells, analyses of cell-cell and cell-matrix interactions, as well as cell proliferation. Differentiation of stem cells and involved signalling pathways.

**Intended learning outcomes**

Problem-oriented handling of eukaryotic cells under sterile conditions and understanding principles of techniques for the analysis of cells. Understanding the molecular basis of cell biology and cellular malfunctions and their significance for the disease development. Independent extraction of relevant information and presentation of selected examples of the current literature. Ability to discuss ethical aspects of stem cell biology.

undergraduate | May not be combined with 03-98-PZB1 or 03-98-PZB3.

Contents
Becoming familiar with basic cell biological principles via hands-on training and seminars. Major topics are the structural organisation, the stability and the dynamics of the cytoskeleton in eukaryotic cells. Biochemical analysis of cytoskeletal components. Complementary imaging using modern microscopic approaches and implementation of the results into the dynamic processes of the cytoskeleton living cells.

Intended learning outcomes
Problem-oriented handling of eukaryotic cells under sterile conditions and understanding principles of techniques for the analysis of the cellular cytoskeleton. Understanding the molecular basis of cell biology and recognising targets for drugs affecting the cytoskeleton. Principles and limitations of classical and modern forms of microscopic imaging for the analysis of the cytoskeleton. Cellular malfunctions and their significance for the disease development. Independent extraction of relevant information and presentation of selected examples of the current literature.

Module coordinator

holder of the Chair of Experimental Biomedicine II and University Hospital, Department of Dermatology, Venerology and Allergology

Module offered by

Faculty of Medicine

ECTS

5

Method of grading

numerical grade

Only after succ. compl. of module(s)

Duration

undergraduate

Module level

Other prerequisites

May not be combined with 03-98-PZB1 or 03-98-PZB2.

Contents

Becoming familiar with basic cell biological principles via hands-on training. Major topics are: cell culture under sterile conditions; transfection of cells and basics in microscopy. In addition, gene expression analysis at RNA level by quantitative real-time PCR, identification and quantification of proteins by immunological techniques such as FACS, ELISA, Western Blot and histology.

Intended learning outcomes

Students learn basic laboratory protocols, such as handling of adherent and non-adherent eukaryotic cells under sterile conditions, and principle techniques to analyse cellular processes. They establish own protocols for processing probes as required, and develop an understanding of the molecular basis of cell biology with a focus on inflammation and immunology.

Courses

(type, number of weekly contact hours, language — if other than German)

### Module coordinator
Institute of Molecular Infection Biology

### Module offered by
Faculty of Medicine

### ECTS
5

### Method of grading
Only after succ. compl. of module(s)

### Duration
undergraduate

### Contents
Fundamental principles of the interaction of bacterial pathogens and multicellular parasites with host organisms; invasion of mammalian cells by intracellular bacteria as well as the regulation and mode of action of bacterial virulence factors; fundamental principles of microbial diagnostics.

### Intended learning outcomes
Students will acquire theoretical and practical knowledge on bacterial virulence factors, their regulation and mode of action in the context of infectious disease, including the invasion of eukaryotic host cells by bacterial pathogens and the multiplication and persistence of bacteria within host cells. The students will learn fundamental principles of the cultivation of bacteria and multicellular parasites under laboratory conditions as well as the utilisation of these cultivation systems for the development of novel antiinfectives. The students will learn the principles of microbial diagnostics, including microbial cultivation as well as DNA-based, microscopical, serological and physiological methods of diagnostic differentiation.

### Courses
(type, number of weekly contact hours, language — if other than German)

- P (5) + S (1)

Module taught in: German / English

### Method of assessment
(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

- a) written examination (45 to 90 minutes) or b) log (10 to 20 pages) or c) oral examination of one candidate each (20 to 30 minutes) or d) oral examination in groups of up to 3 candidates (approx. 20 minutes per candidate) or e) presentation (20 to 30 minutes).

Students will be informed about the type and length of assessment at the beginning of the course.

### Allocation of places

Contents

Foundations and analytical approaches of bacterial genetics are taught based on selected questions from molecular microbiology. Genetic processes are analysed with the help of examples of gene transfer. Molecular genetic and functional biochemical pathways are presented using examples from microbiology.

Intended learning outcomes

Students have developed the ability to approach, analyse and interpret general problems in bacterial genetics based on individually assigned tasks, using techniques of modern molecular biology, microbiology and genetics. They also have developed skills in experimental design, bench work, data analysis and the presentation of scientific results both orally and in writing.

Courses (type, number of weekly contact hours, language — if other than German)

S (1) + P (5)

Module taught in: German/English

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

### Contents

### Intended learning outcomes

The students are familiar with fundamental methods for the development of drugs against helminths. The students are familiar with the principles of helminthology diagnostics as well as helminth genomics/transcriptomics. The students are familiar with the concept of neglected tropical diseases with an emphasis on the African sleeping sickness. They recognise the potential of modern genetic tools for the generation of novel strategies against diseases of poverty caused by parasites.

**Contents**

The module "Imaging Techniques in the Life Sciences" contains a lecture part and a seminar part. In the lecture part basic concepts of optics will be discussed and the functionality of a light microscope will be explained. Afterwards the principles of different variants of super-resolution light microscopy will be introduced. Typical applications for the study of dynamic processes in cells and the temporal and spatial resolution potential of the different methods play a special role. Subsequently, the principles of electron microscopy (transmission electron microscopy and scanning electron microscopy) will be discussed. As far as possible, parallels to light microscopy will be developed. Typical electron microscopic applications in cell biology and structural biology will be discussed including correlative methods combining light and electron microscopy. Then the principles of more specific microscopy methods such as X-ray microscopy, scanning probe microscopy and nuclear resonance microscopy will be introduced. It will be worked out how the fields of application differ from those of classical microscopy methods and what the temporal and spatial resolution capabilities of the individual methods are. Finally, selected imaging methods from the clinical field (X-ray tomography, nuclear spin tomography and ultrasound) for the imaging of entire organisms will be discussed. As far as possible, parallels are drawn to the microscopic procedures. In the seminar part some aspects of the different methods will be deepened by case studies from the literature and by applying the theoretical basics.

**Intended learning outcomes**

The participants learn the functionalities of different imaging techniques. They will be able to classify typical advantages and limitations of the methods and understand general principles of imaging techniques. Building on this understanding, they can easily evaluate and classify other methods. In order to apply what they have learned independently, the participants will analyse a primary publication independently and answer questions on the imaging methods in writing. The participants will acquire competences in dealing with primary literature in a foreign language. By working on the questions, the participants are trained to recognise relevant information in the primary publication and to reproduce it in a different context. Participants will have the opportunity to optimise their written expression skills in a scientific environment by working on questions relating to primary literature.

**Courses**

(type, number of weekly contact hours, language — if other than German)

V (2) + S (1)

**Method of assessment**

(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

a) written examination (approx. 45 to 90 minutes) or b) log (10 to 20 pages) or c) oral examination of one candidate each (20 to 30 minutes) or d) oral examination in groups of up to 3 candidates (approx. 15 to 20 minutes per candidate) or e) presentation (20 to 30 minutes) or f) practical examination (on average approx. 2 hours; time to complete will vary according to subject area but will not exceed a maximum of 4 hours)

Assessment offered: Once a year, winter semester

Language of assessment: German and/or English

**Allocation of places**

Biochemie (Biochemistry) Bachelor’s: 245 places.

**Additional information**

### Contents

Basics of the statistical software SPSS; data preparation; descriptive statistics; basic methods of inference statistics. Advanced part: statistical modelling by multiple regression for metric, binary, ordinal and survival data.

### Intended learning outcomes

The students are able to create data tables, to import and export data, to pool and merge as well as to transform and recode data. They have learned to describe data numerically by statistical measures and to represent it graphically. They are familiar with significance tests and confidence estimates as well as fundamental methods for one and two-sample problems. Advanced part: The students perform multiple regression analyses by the general linear model, binary and ordinal logistic regression as well as Cox regression (including time-dependent covariates) and are able to test for interaction effects.

**Contents**

Courses, in particular in the area of natural sciences, offered by other Faculties that contribute to further professional qualification. Recognition (successfully completed/not successfully completed) as assessment to be granted by the module coordinator.

**Intended learning outcomes**

The students have acquired a broader range of knowledge that enables them to enhance their interdisciplinary thinking skills and improve their professional qualification.

**Courses** (type, number of weekly contact hours, language — if other than German)

**Contents**

Identifying and formulating questions that are scientifically approachable, describing and explaining scientific phenomena and interpreting scientific evidence are key competences that are required, in addition to purely technical skills, to answer or solve scientific problems. Based on concrete examples, students interactively practise the respective skills in small groups and present their results.

**Intended learning outcomes**

In addition to honing their professional and methodological skills, the students develop and enhance their individual personal and interactive skills.

**Courses** (type, number of weekly contact hours, language — if other than German)

**Contents**

Conduct a defined and focused research project under supervision within a limited time frame.

**Intended learning outcomes**

Students demonstrate their ability to solve a defined problem within a chosen area within a given time frame by applying scientific research methods.

**Courses** (type, number of weekly contact hours, language — if other than German)

No courses assigned to module

Module taught in: German / English

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

written thesis (20 to 40 pages)

Language of assessment: German or English

**Allocation of places**

--

**Additional information**

--

**Referred to in LPO I** (examination regulations for teaching-degree programmes)
