#### **Learning Outcomes**

German contents and learning outcome available but not translated yet.

#### Wissenschaftliche Befähigung

- Die Absolventen/-innen k\u00f6nnen Experimente nach Anleitung durchf\u00fchren, analysieren, interpretieren und die Ergebnisse fachlich diskutieren.
- Die Absolventen/-innen sind in der Lage, Problemanalysen durchzuführen und Problemlösungen zu entwickeln.
- Die Absolventen/-innen sind in der Lage, Fachliteratur adäquat zu verstehen, in den naturwissenschaftlichen Kontext einzuordnen und kritisch zu hinterfragen.
- Die Absolventen/-innen erwerben Grundwissen. in den naturwissenschaftlichen Kernfächern Biologie, Physik, Chemie, Mathematik in der Vorklinik mit den Fächern, Anatomie, Physiologie und Biochemie. im klinisch-theoretischen Bereich der Humanmedizin mit den Fächern Infektiologie, Immunologie, Pharmakologie, Neurobiologie, Humangenetik, Pathologie. Sie sind so in der Lage, interdisziplinäre Verknüpfungen herzustellen.
- Die Absolventen/-innen erlernen experimentelle Methoden der Biochemie, Bioinformatik, Molekularbiologie sowie der Bioanalytik.
- Die Absolventen/-innen sind in der Lage, Fachliteratur adäquat zu verstehen und nach Anleitung neue Experimente und Lösungsansätze zu entwickeln und diese vor Fachpublikum zu präsentieren.
- Die Absolventen/-innen besitzen die Fähigkeit, theoretisch erlerntes Wissen in der Praxis anzuwenden und eigenständig Experimente zu entwickeln.
- Die Absolventen/-innen lernen, organsiert und strukturiert den naturwissenschaftlichen Grundprinzipien folgend, zu arbeiten und praktische Experimente in Schriftform und als Präsentation darzustellen.

#### Befähigung, eine qualifizierte Erwerbstätigkeit aufzunehmen

- Die Absolventen/-innen sind in der Lage, theoretisches Wissen in der Praxis anzuwenden.
- Die Absolventen/-innen können Probleme erkennen und dazu eigene Lösungsansätze entwickeln.
- Die Absolventen/-innen können ihr naturwissenschaftliches Wissen und die Praxisarbeit in Schriftform und Präsentationen darstellen und konstruktive Kritik umsetzen.
- Die Absolventen/-innen sind in der Lage, Englisch als Wissenschaftssprache anzuwenden.
- Die Absolventen/-innen sind in der Lage, wissenschaftlich eigenständig zu arbeiten.
- Die Absolventen/-innen können praktische Aufgaben nach Anleitung durchführen, analysieren, interpretieren und anschließend diskutieren.

#### Befähigung zum gesellschaftlichen Engagement

- Die Absolventen/-innen sind in der Lage, naturwissenschaftliche Fachliteratur sowie die neusten Entwicklungen der Forschung kritisch zu reflektieren, in den aktuellen Kontext einzuordnen sowie Auswirkungen auf gesellschaftliche Bereiche wie Umwelt, Wirtschaft etc. zu erkennen und zu diskutieren.
- Die Absolventen/-innen haben sich Wissen auch außerhalb ihres Fachgebietes angeeignet, tauschen sich mit fachfremden Kommilitonen und Dozierenden aus und können begründet Position zu gesellschaftlichen, kulturellen etc. Fragestellungen nehmen.
- Die Absolventen/-innen sind in der Lage, ethische Fragestellungen zum Thema Tierversuche zu reflektieren sowie zu diskutieren.
- Die Absolventen/-innen entwickeln die Motivation und Fähigkeit, eigene Ideen in partizipative Prozesse einzubringen und zu diskutieren.
- Die Absolventen/-innen können ihre erworbenen Kompetenzen anwenden.

#### Persönlichkeitsentwicklung

- Die Absolventen/-innen kennen die Regeln guten wissenschaftlichen Arbeitens und befolgen diese.
- Die Absolventen/-innen erlernen Eigenorganisation und Zeitmanagement.
- Die Absolventen/-innen erlernen die Fähigkeit, im Team zu kommunizieren und zu arbeiten.
- Die Absolventen/-innen erlernen das eigenständige wissenschaftliche Arbeiten sowie die Fähigkeit, ihre Ergebnisse zu reflektieren, mit anderen Positionen zu vergleichen und zu diskutieren.
- Die Absolventen/-innen übernehmen die Verantwortung für ihr Handeln.

#### **Abbreviations used**

Course types:  $\mathbf{E} = \text{field trip}$ ,  $\mathbf{K} = \text{colloquium}$ ,  $\mathbf{O} = \text{conversatorium}$ ,  $\mathbf{P} = \text{placement/lab course}$ ,  $\mathbf{R} = \text{project}$ ,  $\mathbf{S} = \text{seminar}$ ,  $\mathbf{T} = \text{tutorial}$ ,  $\ddot{\mathbf{U}} = \text{exercise}$ ,  $\mathbf{V} = \text{lecture}$ 

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B/NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programmes), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: A = thesis, LV = course(s), PL = assessment(s), TN = participants, VL = prerequisite(s)

#### **Conventions**

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

#### **Notes**

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

#### In accordance with

the general regulations governing the degree subject described in this module catalogue:

#### ASP02015

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

22-Jul-2015 (2015-35) except for mandatory electives 03-98-PZB1-172, 03-98-PZB2-172, 03-98-PZB3-172, 08-BGV-171 in Fast Track procedure at a later time

o6-Dec-2017 (2017-70)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

# **Compulsory Courses**

(110 ECTS credits)

## **Modules Biology**

(20 ECTS credits)

exercises (		exercises (minimur exercises (approx.	n 80%) and successf	exercises. Regular attendance of ful completion of the respective rerequisites for admission to as-	

The first part of the course will acquaint students with the elementary building blocks of life as well as biological categories. Building on this knowledge, the course will then discuss the cell, the smallest unit of life, starting with its macroscopic structure before moving on to its microscopic structure. The course will point out differences and similarities between prokaryotic cells (bacteria, archaebacteria) and eukaryotic cells (animals, plants). The second part will address one of the central issues of biology: evolution. Fundamental mechanisms and hypotheses will be discussed and students will be introduced to major phylogenetic reconstruction methods. Using the examples of plants and animals, the subsequent module components will introduce students to the phylogenetic diversity of eukaryotes. At the level of groups in the plant and animal kingdoms, students will acquire the fundamental knowledge necessary to understand the forms and functions of animal and plant organisms, with morphology and cytology being discussed in an evolutionary and ecological context. The contents of the module are relevant for biological disciplines at all levels of biological organisation. Students will also acquire and practise some of the fundamental preparation skills bioscientists are often required to possess.

#### **Intended learning outcomes**

Knowledge of the structures of prokaryotic and eukaryotic cells and their (biological) macromolecules. Knowledge of the specific characteristics of the intracellular and extracellular structures of prokaryotes as well as animal and plant cells. Ability to recognise evolution as the driving force behind the phylogeny of species. Familiarity with the concepts of phylogenetic relationships between plants/animals. Familiarity with the distinguishing characteristics and major representatives of groups in the plant and animal kingdoms. Ability to select those plant and animal organisms that are most suitable for particular scientific issues. Familiarity with the components and functioning of microscopes. Fundamental skills in the interpretation of macroscopic and histologic preparations by light microscopy. Fundamental preparation skills.

#### **Contents**

In this module, students will acquire theoretical and practical background knowledge on animal developmental biology. The following topics will be covered: early embryonic development of various model organisms (amphibians, nematodes, Drosophila, mouse) and relevance for the systematics of animals, gametogenesis (production of spermatozoa and ova), differential gene expression, cell growth and molecular regulation of cell development, organogenesis, pattern formation, carcinogenesis, stem cell research and cloning, metamorphosis (amphibians, insects), eco-devo, evo-devo.

#### **Intended learning outcomes**

1. Fundamental concepts in developmental biology. 2. Embryonic and postembryonic development of selected model organisms (pattern formation). 3. Molecular mechanisms as well as control of cell development. 4. Interdisciplinary connections between developmental biology and other branches of biology. 5. Cell biology of cotyledon, cancer and stem cells as well as gametes. 6. Interrelations between ontogeny and evolution/environment. 7. Physiological aspects of the developmental processes discussed.

# **Modules Chemistry**

(12 ECTS credits)

Module title		Abbreviation	
General Chemistry for Students of Biomedicine			08-CH-BM-152-m01
Module coordinator		Module offered by	
Dean of Studies Chemie (Chemist	ry)	Institute of Organic Chemistry	
ECTS Method of grading Only after		npl. of module(s)	
numerical grade			
Duration Module level	Other prerequisites	3	
semester undergraduate			
Contents			

The module teaches the basics of chemistry in theory and practice, with special emphasis on medical references. Starting with atoms and ending with biochemically relevant macromolecules, theories and principles of chemistry that are essential for the understanding of biochemical processes are dealt with. The focus of the practical course is on basic experimental working techniques and the safe handling of hazardous substances. For this purpose, qualitative and quantitative analyses as well as simple reactions are carried out and interpreted.

#### **Intended learning outcomes**

Describe and explain the basic models for structure and reactivity of chemical compounds. Draw structural formulas and set up reaction equations. Know and apply formulas for the calculation of substance-specific properties and parameters of chemical processes. Carry out and document experiments based on existing protocols. Verify theoretical models based on experimental findings. Explain the relationships between chemical properties and medical effects as well as the chemical background of diagnostic procedures.

Courses (type, number of weekly contact hours, language - if other than German)

V(2) + V(2) + P(5)

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

written examination (approx. 120 minutes) and assessment of practical skills during lab course (ungraded): Vortestate/Nachtestate (pre and post-experiment oral exams; approx. 15 minutes each) and log (approx. 3 to 5 pages)

Assessment offered: Once a year, summer semester

Module title			Abbreviation		
Laboratory Course Physics for Students of other Disciplines			es	11-PFNF-152-m01	
Module coordinator				Module offered by	
Managing Director of the Institute of App		pplied Physics	Faculty of Physics and Astronomy		
ECTS Method of grading		Only after succ. compl. of module(s)			
3	(not) successfully completed				
Duration Module level Other p		Other prerequisite	es		
1 seme	ester	undergraduate			

#### **Contents**

Simple experiments in the fields of mechanics, vibration theory, thermodynamics, optics, X-rays, nuclear magnetic resonance atomic and nuclear physics, imaging methods.

#### Intended learning outcomes

The students have recognised and understood physical contexts on the basis of the implementation of own experiments. They can conduct simple experiments in the laboratory. They are able to identify and assess sources of errors in experiments. They are able to compile a protocol for experimental procedures. They have a basic understanding of physical phenomena and know the basic ideas and ways of functioning of different measuring and imaging methods as well as their applications, especially in the field of biomedicine.

**Courses** (type, number of weekly contact hours, language — if other than German)

P (4)

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

a) practical assignment with oral test (approx. 15 minutes, during experiments) and b) written examination (approx. 90 minutes).

Each experiment comprises preparation, performance and evaluation. Test as well as performance of experiments can each be repeated once.

#### Allocation of places

Only as part of pool of general transferable skills (ASQ): 10 places (lottery)

#### **Additional information**

according to § 2 para. 2 sentence 2 APOLmCh in conjunction with No. I 2nd letter d) and No. I 1st letter d) of annex 1 to the APOLmCh and No. 4 of annex 2 to the APOLmCh

#### Workload

90 h

#### Teaching cycle

--

#### **Referred to in LPO I** (examination regulations for teaching-degree programmes)

--

Module coordinator Module offered by					<u> </u>
Dean o	f Studi	es Mathematik (Mathema	atics)	Institute of Mathem	natics
ECTS	Metho	od of grading	`		
5	numerical grade				
Duratio	uration Module level Other prerequisites				
1 seme	1 semester undergraduate				
Conten	ts				
		criptive statistics, importa tistics: selected confiden			istributions, basic procedures of cric tests.
Intende	ed lear	ning outcomes			
After finishing the course, students will be able to utilise basic statistical methods for the evaluation of data and to interpret the results. They will know the principles behind applied statistical methods and will be able to take a critical look at the statistical procedures which are available. By presenting solutions of excercises, students will improve their communication skills and learn to justify their solutions using logical arguments.

# **Modules Biochemistry and Molecular Biology**

(20 ECTS credits)

Module coordinator   Module offered by						
Module coordinator holders of the Chairs of Physiological Chemistry, Developmental Biochemistry, Biochemistry and Molecular Biology  ECTS Method of grading Only after succ. compl. of module(s)  10 numerical grade Duration Module level Other prerequisites 2 semester undergraduate Admission prerequisite to assessment: presentations.  Contents Biochemistry: structure and function of the building blocks of life, enzyme kinetics, biochemical analytics, fundmentals of intermediate and energy metabolism, mitochondrial function.  Molecular biology: storage, transduction and expression of genetic information, control of cell functions by hormones and signal transduction processes, basic immunology. Performing biochemical detection reactions and molecular biology experiments.  Intended learning outcomes After successful completion of the module, students are able to describe the molecular structure of cells and or ganisms. They understand basic metabolic processes in humans and their regulation. They can describe molecular biological relationships of cell and organ functions and possible application examples. They possess the ability to review and present limited topics in small teams. They are proficient in the reproducible collection of simple biochemical and molecular biological measurement data and they can describe quality parameters.  Courses (type, number of weekly contact hours, language — if other than German)  V (5) + S (4) + Ü (4)  Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus  Allocation of places  Additional information	Module title					Abbreviation

#### **Contents**

Enhanced insight into functional biochemical and molecular biological relationships. Examples of the molecular control of cell and organ functions. Application of molecular biology and genetic engineering methods to investigate cellular parameters such as gene expression patterns, protein expression or growth and apoptosis. Review of current literature on selected topics.

#### Intended learning outcomes

After participating in the module courses, the students have internalized advanced knowledge of biochemistry and are able to present and use it (professional competence). In addition, they have learned to acquire new knowledge from the primary literature (self-competence), to process this knowledge and to communicate it to people with a comparable level of knowledge (social competence). They have acquired practical routine in circumscribed experiments (methodological competence) and can plan and develop their own experimental analyses on this basis.

	Learn basic principles of physiology and pathophysiology. One focus is on the hemodynamic processes in the heart and circulatory system, the vegetative regulation of the cardiovascular system and the spread of excitation						

heart and circulatory system, the vegetative regulation of the cardiovascular system and the spread of excitation and contraction of the heart muscle. Other topics include the physiology of the cell membrane, the regulation of the water and electrolyte balance in the kidneys, the acid-base balance and the regulation of respiration. Application of the necessary techniques.

#### Intended learning outcomes

Professional work with measuring devices to record the necessary parameters on humans and evaluation of the measured values obtained for the analysis of bodily functions. Checking, evaluating and error analysis of the results. Understanding of the physiological principles and their importance for human diseases. Independent work and problem-oriented learning through presentation and discussion of the measurement results and the organ functions derived from them. Acquiring the ability to discuss scientific and medical aspects of physiology and pathophysiology.

Conten	Contents				

Project work in a research laboratory focusing on training in new methods and the in-depth analysis of a scientific problem. This project may lay the foundation for a subsequent Bachelor's thesis.

#### Intended learning outcomes

Performing more elaborate experiments with sequential methods. Application of methods learned in the course and learning of project-specific analysis and evaluation procedures. Gradual introduction to independent experimental work and problem-solving strategies. Students gain an in-depth insight of a current research topic based on primary literature and knowledge transfer.

The main topics are: Cell culture of adherent cells under sterile conditions, gene expression analysis at RNA level using quantitative real-time PCR and fluorescence reporter genes, identification and quantification of proteins using immunological techniques such as Western blot, FACS and ELISA, investigating cell migration using single cell tracking and time-lapse microscopy, as well as preparing and staining of histological sections.

#### **Intended learning outcomes**

Understanding and self-reliant application of basic cell and molecular biological techniques and generally applicable methods for the analysis of gene expression and cell migration. Analysis, evaluation and (critical) consideration of the results with error analysis. The aim of the qualification is to acquire basic specialist and methodological skills in cell and molecular biology in the context of inflammatory processes, as well as to understand and remember basic cellular and immunological principles.

Contor	Contonts					

Part immunology: Learning the basics of immunology through practical exercises with different immune cells. The focus is on antigen uptake by dendritic cells and their antigen presentation to T cells. Subsequent time-kinetic analyzes to determine the activation of the T cells.

Part virology: Learning of virological basic principles by means of practical exercises. The focus is on the infection of cells with wild-type and transgenic viruses, morphological examination of infected cells with cytopathic effect, determination of virus titer and tropism, investigation of the functionality of antiviral antibodies and of the humoral immune response against viral infections.

#### **Intended learning outcomes**

Part immunology: Professional work with primary immune cells under sterile conditions and the ability to independently apply basic immunological working methods. Mastering the basic safety aspects of working in the S2 laboratory when dealing with pathogen-stimulated cell cultures and principles of immunological methods in research. Checking, analyzing, interpreting, evaluating and classifying/judging the results. Allocation of the molecular basis of the immunoregulatory mechanisms, their consequences and causal impact on immune tolerance and immune stimulation.

Part virology: Expert work with viruses and eukaryotic cells under sterile conditions as well as the ability to independently apply basic working methods of virology. Mastery of the basic safety aspects of working in an S2 laboratory with infectious agents as well as the concepts of genetic safety and principles of virological methods in research and diagnostics. Review, analyze, interpret, evaluate and classify/assess results. Assign the molecular basis of viral infections, their consequences and causal site in the disease process.

Conter	Contents					

Experiments to characterize pathogens and their pathogenic properties are carried out. The internship includes, among other things, methods for identifying bacterial pathogens, physiological tests, biochemical detection assays and molecular methods. Furthermore, the genetic causes of antibiotic resistance are determined and gene regulation mechanisms investigated. Methods for determining the human microbiome are learned and working with databases is practiced. Virulence factors that are important in the host-pathogen interaction are analyzed.

#### **Intended learning outcomes**

Acquisition of professional competences to characterize bacterial pathogens, to classify their virulence and physiological properties and to understand their role in disease processes. Ability to analyze sequencing data using databases. Ability to discuss general aspects of infectious diseases in the society. Methodological competence to solve complex problems based on scientific data. Ability to present scientific work to others.

Foundations and analytical approaches of bacterial genetics are taught based on selected questions from molecular microbiology. Genetic processes are analysed with the help of examples of gene transfer. Molecular genetic and functional biochemical pathways are presented using examples from microbiology.

#### Intended learning outcomes

Students have developed the ability to approach, analyse and interpret general problems in bacterial genetics based on individually assigned tasks, using techniques of modern molecular biology, microbiology and genetics. They also have developed skills in experimental design, bench work, data analysis and the presentation of scientific results both orally and in writing.

Conter	Contents				

Methods for in vitro cultivation of parasitic helminths and free-living reference models. Genomic and transcriptomic analyses of helminth parasites. Virulence factors of helminth parasites and drug design and development of novel anthelminthics. Methods for the cell biological and genetic analysis of African trypanosomes. The focus is on the cell surface coat as major virulence factor and its manipulation by RNA interference.

#### **Intended learning outcomes**

The students are familiar with fundamental methods for the development of drugs against helminths. The students are familiar with the principles of helminthology diagnostics as well as helminth genomics/transcriptomics. The students are familiar with the concept of neglected tropical diseases with an emphasis on the African sleeping sickness. They recognise the potential of modern genetic tools for the generation of novel strategies against diseases of poverty caused by parasites.

Conter	Contents					

The lecture series will cover the pathobiochemistry and pathophysiology of selected diseases from nephrology, cardiology, endocrinology, pneumology, psychiatry and aspects of clinical molecular biology. The focus is on the biochemical and molecular causes of these diseases and the challenges for respective clinical diagnosis, treatment and translational research.

# **Intended learning outcomes**

Understanding and remembering the pathobiochemical and pathophysiological bases of diseases and their importance for disease processes. Understanding how the pathobiochemical and pathophysiological mechanismus of diseases are used in clinical diagnosis and treatment.

**Courses** (type, number of weekly contact hours, language — if other than German)

V(3) + V(1)

Module taught in: German/English

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

- a) written examination (45 to 90 minutes) or
- b) log (10 to 20 pages) or
- c) oral examination of one candidate each (20 to 30 minutes) or
- d) oral examination in groups of up to 3 candidates (approx. 20 minutes per candidate) or
- e) presentation (20 to 30 minutes)

Students will be informed about the type and length of assessment at the beginning of the course.

Language of assessment: German or English

Contar	Contents					

Fundamental knowledge and analytical approaches of experimental biomedicine are taught based on selected questions of platelet physiology and megakaryopoiesis. Emphasis is put on the generation and use of antibodies. Transgenic mouse models are used to elucidate the interplay underlying (patho-)physiological processes.

# **Intended learning outcomes**

Students have developed the ability to approach, analyse and interpret experimental data obtained with the help of monoclonal antibodies, in particular in the field of platelet physiology. They also have developed skills in experimental design, bench work, data analysis and the interpretation of scientific literature as well as the presentation of scientific results in English.

Contar	Contents				

Becoming familiar with basic cell biological principles via hands-on training and individual seminars. Major topics are the structural organization of eukaryotic cells and differentiation of stem cells into different cell types. Analyses of cellular processes such as reorganization of the cytoskeleton under stress conditions, proliferation, apoptosis, differentiation, regulation of transcription, stimulation of signaling pathways and cellular responses. Application of the necessary techniques.

#### Intended learning outcomes

Problem-oriented handling of eukaryotic cells under sterile conditions as well as the ability to independently apply basic working techniques to analyze cells. Checking, evaluating and error analysis of the results. Understanding the molecular basis of cell biology as well as cellular malfunctions and their significance for disease processes. Independent extraction of relevant information and presentation of selected examples of the current literature in a seminar. Acquiring the ability to discuss scientific and ethical aspects of stem cell biology.

Becoming familiar with basic cell biological principles via hands-on training and seminars. Major topics are the structural organisation, the stability and the dynamics of the cytoskeleton in eukaryotic cells. Biochemical analysis of cytoskeletal components. Complementary imaging using modern microscopic approaches and implementation of the results into the dynamic processes of the cytoskeleton living cells.

#### **Intended learning outcomes**

Problem-oriented handling of eukaryotic cells under sterile conditions and understanding principles of techniques for the analysis of the cellular cytoskeleton. Understanding the molecular basis of cell biology and recognizing targets for drugs affecting the cytoskeleton. Principles and limitations of classical and modern forms of microscopic imaging for the analysis of the cytoskeleton. Cellular malfunctions and their significance for the disease development. Independent extraction of relevant information and presentation of selected examples of the current literature.

#### **Contents**

The main topics are: Cell culture of adherent cells under sterile conditions, gene expression analysis at RNA level using quantitative real-time PCR and fluorescence reporter genes, identification and quantification of proteins using immunological techniques such as Western blot, FACS and ELISA, investigating cell migration using single cell tracking and time-lapse microscopy, as well as preparing and staining of histological sections.

#### **Intended learning outcomes**

Understanding and self-reliant application of basic cell and molecular biological techniques and generally applicable methods for the analysis of gene expression and cell migration. Analysis, evaluation and (critical) consideration of the results with error analysis. The aim of the qualification is to acquire basic specialist and methodological skills in cell and molecular biology in the context of inflammatory processes, as well as to understand and remember basic cellular and immunological principles.

Contents					

Part immunology: Learning the basics of immunology through practical exercises with different immune cells. The focus is on antigen uptake by dendritic cells and their antigen presentation to T cells. Subsequent time-kinetic analyzes to determine the activation of the T cells.

Part virology: Learning of virological basic principles by means of practical exercises. The focus is on the infection of cells with wild-type and transgenic viruses, morphological examination of infected cells with cytopathic effect, determination of virus titer and tropism, investigation of the functionality of antiviral antibodies and of the humoral immune response against viral infections.

### **Intended learning outcomes**

Part immunology: Professional work with primary immune cells under sterile conditions and the ability to independently apply basic immunological working methods. Mastering the basic safety aspects of working in the S2 laboratory when dealing with pathogen-stimulated cell cultures and principles of immunological methods in research. Checking, analyzing, interpreting, evaluating and classifying/judging the results. Allocation of the molecular basis of the immunoregulatory mechanisms, their consequences and causal impact on immune tolerance and immune stimulation.

Part virology: Expert work with viruses and eukaryotic cells under sterile conditions as well as the ability to independently apply basic working methods of virology. Mastery of the basic safety aspects of working in an S2 laboratory with infectious agents as well as the concepts of genetic safety and principles of virological methods in research and diagnostics. Review, analyze, interpret, evaluate and classify/assess results. Assign the molecular basis of viral infections, their consequences and causal site in the disease process.

Contor	Contents					

Experiments to characterize pathogens and their pathogenic properties are carried out. The internship includes, among other things, methods for identifying bacterial pathogens, physiological tests, biochemical detection assays and molecular methods. Furthermore, the genetic causes of antibiotic resistance are determined and gene regulation mechanisms investigated. Methods for determining the human microbiome are learned and working with databases is practiced. Virulence factors that are important in the host-pathogen interaction are analyzed.

#### **Intended learning outcomes**

Acquisition of professional competences to characterize bacterial pathogens, to classify their virulence and physiological properties and to understand their role in disease processes. Ability to analyze sequencing data using databases. Ability to discuss general aspects of infectious diseases in the society. Methodological competence to solve complex problems based on scientific data. Ability to present scientific work to others.

Foundations and analytical approaches of bacterial genetics are taught based on selected questions from molecular microbiology. Genetic processes are analysed with the help of examples of gene transfer. Molecular genetic and functional biochemical pathways are presented using examples from microbiology.

#### Intended learning outcomes

Students have developed the ability to approach, analyse and interpret general problems in bacterial genetics based on individually assigned tasks, using techniques of modern molecular biology, microbiology and genetics. They also have developed skills in experimental design, bench work, data analysis and the presentation of scientific results both orally and in writing.

**Courses** (type, number of weekly contact hours, language — if other than German)

#### **Contents**

Methods for in vitro cultivation of parasitic helminths and free-living reference models. Genomic and transcriptomic analyses of helminth parasites. Virulence factors of helminth parasites and drug design and development of novel anthelminthics. Methods for the cell biological and genetic analysis of African trypanosomes. The focus is on the cell surface coat as major virulence factor and its manipulation by RNA interference.

#### **Intended learning outcomes**

The students are familiar with fundamental methods for the development of drugs against helminths. The students are familiar with the principles of helminthology diagnostics as well as helminth genomics/transcriptomics. The students are familiar with the concept of neglected tropical diseases with an emphasis on the African sleeping sickness. They recognise the potential of modern genetic tools for the generation of novel strategies against diseases of poverty caused by parasites.

# Contents

The module "Imaging Techniques in the Life Sciences" contains a lecture part and a seminar part. In the lecture part basic concepts of optics will be discussed and the functionality of a light microscope will be explained. Afterwards the principles of different variants of superresolution light microscopy will be introduced. Typical applications for the study of dynamic processes in cells and the temporal and spatial resolution potential of the different methods play a special role. Subsequently, the principles of electron microscopy (transmission electron microscopy and scanning electron microscopy) will be discussed. As far as possible, parallels to light microscopy will be developed. Typical electron microscopic applications in cell biology and structural biology will be discussed including correlative methods combining light and electron microscopy. Then the principles of more specific microscopy methods such as X-ray microscopy, scanning probe microscopy and nuclear resonance microscopy will be introduced. It will be worked out how the fields of application differ from those of classical microscopy methods and what the temporal and spatial resolution capabilities of the individual methods are. Finally, selected imaging methods from the clinical field (X-ray tomography, nuclear spin tomography and ultrasound) for the imaging of entire organisms will be discussed. As far as possible, parallels are drawn to the microscopic procedures. In the seminar part some aspects of the different methods will be deepened by case studies from the literature and by applying the theoretical basics.

## **Intended learning outcomes**

The participants learn the functionalities of different imaging techniques. They will be able to classify typical advantages and limitations of the methods and understand general principles of imaging techniques. Building on this understanding, they can easily evaluate and classify other methods. In order to apply what they have learned independently, the participants will analyse a primary publication independently and answer questions on the imaging methods in writing. The participants will acquire competences in dealing with primary literature in a foreign lan-guage. By working on the questions, the participants are trained to recognise relevant information in the primary publication and to reproduce it in a different context. Participants will have the opportunity to optimise their written expression skills in a scientific environment by working on questions relating to primary literature.

1 seme	1 semester undergraduate				
Conton	Contents				

The lecture imparts knowledge in the following sub-areas:

- 1) Theoretical fundamentals of genetic engineering and genetic engineering safety requirements as well as an overview of the areas of application of genetic engineering. Introduction to the legal framework and regulations that must be observed when handling biomaterials, genetically modified organisms and pathogens.
- 2) Learn and reflect
  - principles of good scientific practice
  - genesis and worldwide establishment of principles
  - individual people, (societal) groups and institutions involved, their roles and interests
  - specific regulations and procedures of dealing with misconduct, especially those of JMU

### Intended learning outcomes

Ad 1) The students have knowledge of methods of genetic engineering as well as the relevant regulations of the Infection Protection Act and the Genetic Engineering Safety and Biological Substances Ordinance. They can categorize biomedical work with regard to its hazard potential. The students remember safety-relevant rules of conduct in the laboratory and are able to apply them in practice.

Ad 2) Factual competencies: Knowledge of rules, knowledge of the current discussion on GSP worldwide Self-competencies: Ability to understand GSP as a process in science and starting point to develop one's own awareness of and attitude towards GSP.

#### Contents

According to the Animal Welfare Regulation Govering Experimental Animals (TierSchVersV), animal experiments on vertebrates and cephalopods may only be carried out by persons who possess the required knowledge and skills. This means that both theoretical and practical expertise must be acquired.

In the lecture Animal Welfare and Laboratory Animal Science, the theoretical knowledge is taught, which is listed in Annex 1 Chapter 3 TierSchVersV.

In terms of content, the module is based on EU Directive 2010/63 for acquiring expertise in animal welfare (formerly FELASA Cat. B). Based on the background of the specific biology, anatomy and physiology of the animal species mouse, optionally also of the rat, which are recapitulated in the module in an application-oriented manner, the students\* learn and practice exemplary essential animal experimental techniques with a focus on keeping and handling the animals, administration of substances, sampling of biological probes, anesthesia and analgesia through to surgical interventions and the painless and low-stress euthanasia of animals. In addition to the methodological and experimental principles, the module also focuses on acquiring in-depth knowledge of the german animal protection law and the TSchVersVO as well as the ability for an ethical consideration of animal experiments in the area of conflict between animal protection and medical-translational research.

## **Intended learning outcomes**

Students acquire the expertise for the theoretical part for conducting animal experiments, which is certified by passing the exam. Raising awareness of ethical issues related to the relationship between humans and animals, intrinsic value of life, and arguments for and against the use of animals for scientific purposes.

The formal objective is the acquisition of animal welfare expertise based on the EU directive in consultation with the local authorities. The course enables you to handle laboratory animals in an animal welfare-friendly manner, conveys core competencies in animal experiments, taking into account the complexity of the entire organism, and methodological requirements for planning and conducting your own animal experiments. It teaches the legal animal welfare principles for applying for your own experimental projects. A special concern is the raising of awareness for the respect of the experimental model as a pain-sensitive living being while maintaining objective experimental principles.

Basics of the statistical software SPSS; data preparation; descriptive statistics; basic methods of inference statistics. Advanced part: statistical modelling by multiple regression for metric, binary, ordinal and survival data.

# Intended learning outcomes

The students are able to create data tables, to import and export data, to pool and merge as well as to transform and recode data. They have learned to describe data numerically by statistical measures and to represent it graphically. They are familiar with significance tests and confidence estimates as well as fundamental methods for one and two-sample problems. Advanced part: The students perform multiple regression analyses by the general linear model, binary and ordinal logistic regression as well as Cox regression (including time-dependent covariates) and are able to test for interaction effects.

Conten	Contents					

Students present selected primary publications written in English and discuss their contents, methods and results in the group.

# **Intended learning outcomes**

Students learn the structure of scientific articles and the appropriate approaches to answer a specific question. They possess the ability to read scientific articles critically, to extract relevant information for a presentation, to evaluate results and face them to critical discussion in the group regarding their interpretation. They develop the ability to place the contents of an article in the broader context of a specific subject area, also in relation to clinically relevant aspects.

Courses (type, number of weekly contact hours, language - if other than German)

S (1)

Module taught in: German/English

Contents					

Identifying and formulating questions that are scientifically approachable, describing and explaining scientific phenomena and interpreting scientific evidence are key competences that are required, in addition to purely technical skills, to answer or solve scientific problems. Based on concrete examples, students interactively practise the respective skills in small groups and present their results.

# **Intended learning outcomes**

In addition to training their professional and methodological skills, the students develop and improve their individual personal and interactive skills. With this they deepen methodological competences and extend analysis competences. Students are also able to argue professionally, to express different opinions, e.g. on ethical aspects, and are sensitised to scientific misconduct.

### **Contents**

Conduct a defined and focused research project under supervision within a limited time frame and its presentation in a written thesis.

### Intended learning outcomes

Students demonstrate their ability to solve a defined problem within a chosen area within a given time frame by applying scientific research methods. Under supervision, independent work and integration of own ideas are encouraged. In the written thesis they show that they are able to formulate a defined aim, explain the applied methodology in a reproducible manner, evaluate and present results according to scientific standards, subject them to a critical evaluation, place them in the context of the known literature and derive further work from them.
