Content and Objectives of the Programme

The Faculty of Chemistry and Pharmacy and the Faculty of Medicine of the JMU offer the study program "Biochemistry" with the degree "Master of Science" (acquisition of 120 ECTS credits) as part of a consecutive Bachelor and Master program. The study program is assigned to the profile type "rather research-oriented". The degree "Master of Science" is further qualifying for a vocational or research-oriented career. The qualification acquired during the Master degree program corresponds to that of a Diploma in Biochemistry (University).

The biochemistry study program prepares for a scientific profession in the field of biochemistry and for an academic career in a Ph.D. program. The aim of the training is to provide students with in-depth knowledge of scientific practice in research and application of biochemistry and its fundamental principles. By educating and training of analytical thinking, the student acquires the ability to familiarize himself/herself later on with the manifold tasks assigned to him/her and, in particular, to independently apply the basic knowledge acquired in the consecutive bachelor's and master's degree program and transfer it to new problems.

Through the final thesis, the students show their capability to deal with a biochemical problem in a thematically and temporally limited extent, especially by applying known methods or by modifying the same, from a scientific point of view. The Master's exam ascertains that the candidate has a good understanding of the correlations in biochemistry and the ability to apply the acquired scientific methodology independently. It leads to the acquisition of an internationally comparable degree in the field of biochemistry and represents a further vocational or research-oriented degree.

The successfully completed Master exam entitles the graduate to commence a doctoral degree program in accordance with the relevant doctoral degree program regulations of the JMU in their valid versions.
Abbreviations used

Course types: \text{E} = \text{field trip}, \text{K} = \text{colloquium}, \text{O} = \text{conversatorium}, \text{P} = \text{placement/lab course}, \text{R} = \text{project}, \text{S} = \text{seminar}, \text{T} = \text{tutorial}, \text{Ü} = \text{exercise}, \text{V} = \text{lecture}

Term: \text{SS} = \text{summer semester}, \text{WS} = \text{winter semester}

Methods of grading: \text{NUM} = \text{numerical grade}, \text{B/NB} = (\text{not}) \text{ successfully completed}

Regulations: \text{(L)ASPO} = \text{general academic and examination regulations (for teaching-degree programmes)}, \text{FSB} = \text{subject-specific provisions}, \text{SFB} = \text{list of modules}

Other: \text{A} = \text{thesis}, \text{LV} = \text{course(s)}, \text{PL} = \text{assessment(s)}, \text{TN} = \text{participants}, \text{VL} = \text{prerequisite(s)}

Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

In accordance with

the general regulations governing the degree subject described in this module catalogue:

\text{ASPO2015}

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

\text{5-Jul-2017 (2017-43)}

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

**Contents**

The module imparts detailed and in-depth the current state of science in the field of research on RNA-protein complexes, their structure and function, as well as the theoretical basics of current RNA-based research methods.

**Intended learning outcomes**

After participating in the module events, the student is familiar with the course contents and is able to transfer them to new scientific problems. He/She is able to classify new research results in the context of recent findings and to assess their significance.

**Courses** (type, number of weekly contact hours, language — if other than German)

V (1) + S (1)

Module taught in: German or English

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

a) written examination (30 to 60 minutes) or b) log (approx. 10 to 20 pages) or c) oral examination of one candidate each (30 to 60 minutes) or d) oral examination in groups of up to 3 candidates (approx. 30 to 60 minutes) or e) presentation (20 to 45 minutes).

Students will be informed about the method, length and scope of the assessment prior to the course.

Language of assessment: German and/or English

### Contents

The module allows a deeper incorporation into the research methods and techniques in the field of investigation of RNA-protein complexes in a practical course.

### Intended learning outcomes

After completing the module, the student masters the techniques used in the practical course. He/She is able to explain and to critically reflect the performed experiments, and to both present and discuss the results in a written report.

</table>

**Contents**

The module "Macromolecular Crystallography" consists of lectures, exercises and a practical course. The lecture series covers the following topics: Biophysical characterization of protein samples prior to crystallization; crystallization by various techniques, either by manual or high throughput operation; properties and production of X-rays and their production by means of X-ray generators and synchrotron sources; data collection with various detector systems; symmetry properties of molecules, point groups and space groups; description of the phase problem and solving this problem by means of multiple isomorphous replacement, anomalous diffraction and molecular replacement; improving experimentally determined phases by solvent flattening and molecular averaging; manual and automatic model building; refinement procedures and analysis of experimentally determined structures. In the exercises the topics covered in the lectures will be recapitulated with the help of problem sets. In the practical course, the students will carry out all steps discussed in the lecture series, which are necessary for the determination of a protein structure using lysozyme as an example; starting with the crystallization of the purified protein, data collection using the in-house diffractometer, the solution of the phase problem on the basis of the anomalous signal of the intrinsic sulfur atoms, model building, structure refinement and, finally, the analysis of the refined structure.

**Intended learning outcomes**

Participants will acquire extensive knowledge in modern macromolecular crystallographic methods. The basics of the method are presented in great depth in the lectures, the intellectually most demanding aspects are reiterated in the exercises and the practical approach will be explained in detail in the practical course. Participants are thus put in a position to be able to take on a crystallographic structure analysis as part of their master's or PhD studies.

**Contents**
The module "Mass Spectrometry and Proteomics" includes a lecture, which teaches the basics of mass spectrometry of biomolecules. There, inter alia, the gentle ionization ESI and MALDI, and the functional principles of different mass analyzers such as TOF and Orbitrap are discussed. The lecture part gives an introduction to the mass spectrometric fragmentation techniques CID and ETD, separation techniques for peptides and proteins, as well as to the analysis of mass spectrometric data (protein databases, FDR, GO terms, etc.). Furthermore, an overview of the field of quantitative proteomics is given; especially different methods of quantification by stable isotopes (SILAC, N15-Labeling, iTRAQ, etc.) will be discussed. Finally, the lecture gives insights in the mass spectrometric analysis of posttranslational modifications. The seminar part of the module imparts fundamentals of mass spectrometric analysis data. To this end, the participants will be introduced to different software packages and then work independently on exemplary data sets to find solutions for different tasks. In the practical part of the module, participants will isolate a protein complex from yeast by affinity purification. This complex is separated by 1D-SDS-PAGE and proteolytically cleaved in the gel. The peptides obtained are analyzed by nanoLC-MS / MS. Finally data analysis is conducted with the aim of identifying specific interaction partners and post-translational modifications.

**Intended learning outcomes**
On a broad basis, participants are taught the theoretical foundations of mass spectrometric analysis of proteins and proteomes. In the seminar, participants learn how to use data analysis software in the field of proteomics. In the practical part, students will learn affinity purification of a protein complex, and typical steps of sample preparation for mass spectrometric protein analysis, such as SDS-PAGE and in-gel digestion. Participants get an insight into the operation of a nanoHPLC-coupled mass spectrometer.

**Courses**
V (2) + S (1) + P (2)
Module taught in: German or English

**Method of assessment**
a) written examination (approx. 45 to 90 minutes) or b) log (20 to 30 pages) or c) oral examination of one candidate each (20 to 30 minutes) or d) oral examination in groups of up to 3 candidates (15 to 30 minutes per candidate) or e) presentation (20 to 40 minutes)
Assessment offered: Once a year, winter semester
Language of assessment: German and/or English

**Allocation of places**
Biochemie (Biochemistry), Master’s: 6 places. Places will be allocated according to the number of subject semesters. Among applicants with the same number of subject semesters, places will be allocated by lot. A waiting list will be maintained and places re-allocated by lot as they become available.

Contents

The module "Protein Biophysics" will provide participants with detailed insights into the biophysical characterization of proteins. We will deal both with soluble model proteins (Dr. Sonja Lorenz) and with the particular challenges of membrane protein research (Dr. Sebastian Geibel). The module contains a lecture part that deals with the basics of different biophysical methods to characterize protein stability, oligomerization behavior and shape. Among others, small angle X-ray scattering (SAXS), circular dichroism (CD) spectroscopy, fluorimetry (DSC) and light scattering (DLS + MALS) are discussed. The lectures will be complemented by short presentations on selected topics. In the practical part of the course, the techniques discussed will be applied using self-isolated proteins, data will be analysed with computer support and interpreted scientifically.

Intended learning outcomes

The participants get an overview of the manifold biophysical methods for characterizing proteins and the particularities of working with membrane proteins. The acquired knowledge ranges from the theoretical basics of the methods to their practical application to the scientific analysis and interpretation of the data and should give a realistic impression of the researcher’s life.

### Contents

The module "Electron Microscopy and Image Processing in Structural Biology" contains a lecture part which explains the basics of electron microscopy and image processing. First, the components of the electron microscope, beam path, image formation and contrast transmission are explained. Subsequently, different methods of sample preparation for electron microscopy in structural biology will be discussed as well as strategies for instrument alignment and data acquisition. The second part of the lecture concentrates on the processing of image data. The focus is on the principles of single image analysis. This includes the alignment of image data, their classification and three-dimensional image reconstruction. DeNovo and iterative methods of 3D image reconstruction are discussed. The learned principles are then applied to the special cases of 2D crystal analysis and tomography. Finally, micro electron diffraction is presented as an alternative to X-ray structure analysis. In the seminar part of the module some aspects of the lecture are deepened on the basis of case studies from the literature. The students will read these case studies in advance. In this work they are guided through a catalogue of questions. Some of the questions will be addressed independently in a written homework in advance. Most case studies will be presented by one student each. All case studies will be explained in a discussion. The participants develop a critical understanding of the advantages and limitations of the method. Some selected topics will be further deepened by arithmetic exercises.

### Intended learning outcomes

The participants will learn the theoretical basics of electron microscopy and image processing in structural biology on a broad basis. They will get an overview of key strategies of the method, which are essential for structure elucidation. These can be applied and deepened in a practical course. In the end, all participants will be able to understand, communicate and critically evaluate primary literature on this method.

### Courses

(type, number of weekly contact hours, language — if other than German)

V (1) + S (1)

Module taught in: German or English

### Method of assessment

(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

a) written examination (approx. 45 to 90 minutes) or b) log (20 to 30 pages) or c) oral examination of one candidate each (20 to 30 minutes) or d) oral examination in groups of up to 3 candidates (15 to 30 minutes per candidate) or e) presentation (20 to 40 minutes)

Language of assessment: German and/or English

</table>

### Contents

The module "Practical Course Electron Microscopy and Single Image Processing" consists of an electron microscopy part and an image processing part. In the electron microscopy part the participants get to know the different elements of the electron microscope and how they work. Aspects of alignment, focusing and data acquisition will be developed. The participants will then use different preparation methods for electron microscopy (grid preparation, negative contrast and vitrification). The samples are then imaged in an electron microscope. Sample and data optimization are developed and data sets are created for further image processing. In the image processing part, the participants are first introduced to general aspects of computer operation under Linux (basic Linux commands, basic shell scripting). On this basis, the participants determine the structure of a protein complex from a real test data set. They learn step by step how to select good images, how to correct data for image-dependent aberrations and how to normalize, mask and filter image data. With the data prepared in this way, the participants will determine the characteristic views of the complex (2D classification) and combine these with various methods to form a DeNovo model. This model is then refined in an iterative process. In the second part of the image processing practical course the participants apply what they have learned to their own data. At the end of the practical course the participants present the different working steps and exchange experiences.

### Intended Learning Outcomes

The participants will be taught the skills to prepare an already purified biological complex for structure determination with the help of electron microscopy and to independently determine its structure de novo from electron microscopic data. The participants will acquire a practical understanding for the data acquisition at the electron microscope and will be able to plan and carry out a corresponding experiment with technical support in the future. The participants will further develop the following key qualifications in the course: Computer skills (insights into Linux), team skills (working in teams of 2-3 students with varying composition), communication skills (oral and written presentation of results).

Module title: Biophysics and Molecular Biotechnology

Abbreviation: 07-MS2BT-152-m01

Module coordinator: holder of the Chair of Biotechnology and Biophysics

Module offered by: Faculty of Biology

ECTS: 10

Method of grading: numerical grade

Duration: 1 semester

Module level: graduate

Other prerequisites: --

Contents:
This lecture provides a broad overview of biophysical techniques and their applications. The first part of the lecture discusses fundamental aspects of thermodynamics, kinetics and molecular interactions. The course then moves on to discuss biophysical methods that facilitate the investigation of individual cells down to the level of single molecules. Focus is on electromanipulation and dielectric spectroscopy of cells, biomembranes, electrophysiology, ion channels, protein folding, single-molecule fluorescence methods and high-resolution as well as dynamic microscopy.

Intended learning outcomes:
Students will have acquired a knowledge of fundamental biophysical methods and their applications that will enable them to independently review relevant literature. In addition, they will have become acquainted with - or, where necessary, will be able to independently acquaint themselves with - biophysical mechanisms.

Courses:
V (2) + S (1)
Module taught in: English

Method of assessment:
Students will be informed about the method, length and scope of the assessment prior to the course. Usually, one of the following options will be chosen: a) written examination (30 to 60 minutes, including multiple choice questions) or b) oral examination of one candidate each (30 to 60 minutes) or c) oral examination in groups of up to 3 candidates (30 to 60 minutes)
Language of assessment: German and/or English

Allocation of places:

### Contents

Participants of the module read predetermined papers from a specific subject area of life sciences related to biochemistry. In a rotation mode each participant presents these publications in plenary sessions, followed by a critical discussion of the content presented. The suitability (regarding subject and level) of a given literature seminar has to be clarified with the module coordinator in advance.

### Intended learning outcomes

The students train their abilities in reading and critical questioning current literature of the life sciences with relation to the biochemistry. They improve their skills in presenting and arguing of scientific contents.

**Contents**

This module will discuss contemporary topics in virology.

**Intended learning outcomes**

Students are able to understand current problems in virology and to discuss these in detail.

**Courses**

(type, number of weekly contact hours, language — if other than German)

V (1) + S (2)

Module taught in: English

**Method of assessment**

(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

a) written examination (approx. 45 to 90 minutes) or b) oral examination of one candidate each (20 to 30 minutes) or c) oral examination in groups of up to 3 candidates (15 to 30 minutes per candidate)

Assessment offered: Once a year, summer semester

Language of assessment: German and/or English

**Allocation of places**

Biochemie (Biochemistry), Master's: 3 places. Places will be allocated according to the number of subject semesters. Among applicants with the same number of subject semesters, places will be allocated by lot. A waiting list will be maintained and places re-allocated by lot as they become available.

**Contents**

Foundations and analytical approaches of bacterial genetics are taught based on selected questions from molecular microbiology. Genetic processes are analysed with the help of examples of gene transfer. Molecular genetic and functional biochemical pathways are presented using examples from microbiology.

**Intended learning outcomes**

Students have developed the ability to approach, analyse and interpret general problems in bacterial genetics based on individually assigned tasks, using techniques of modern molecular biology, microbiology and genetics. They also have developed skills in experimental design, bench work, data analysis and the presentation of scientific results both orally and in writing.

**Courses**

(type, number of weekly contact hours, language — if other than German)

V (1) + S (1) + Ü (4)

**Method of assessment**

(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

a) written examination (approx. 45 to 90 minutes) or b) log (20 to 30 pages) or c) oral examination of one candidate each (20 to 30 minutes) or d) oral examination in groups of up to 3 candidates (15 to 30 minutes per candidate) or e) presentation (20 to 40 minutes)

Language of assessment: German and/or English

**Allocation of places**

Biochemie (Biochemistry), Master's: 4 places. Places will be allocated according to the number of subject semesters. Among applicants with the same number of subject semesters, places will be allocated by lot. A waiting list will be maintained and places re-allocated by lot as they become available.

Contents
Fundamental and specific knowledge of cardiovascular biology is taught based on selected questions from this field.

Intended learning outcomes
Students have developed the ability to approach, analyse and interpret general problems in cardiovascular biology and, in particular, in developmental biology, erythropoiesis, blood coagulation, myocardial diseases, diabetes, regulation of blood pressure, platelets and stroke.

Courses (type, number of weekly contact hours, language — if other than German)

**Contents**

In the module "Klinische Onkologie" ("Clinical Oncology"), various clinicians will present a current view of the disease "cancer". Topics will include an overview of different tumour entities (including cancers of the blood, skin, breast, lung, liver, colon, endocrine system), treatment modalities (e.g. immunotherapy, radiation-based therapy, personalised medicine), diagnostics, pathology, clinical studies.

**Intended learning outcomes**

An understanding of the biological commonalities and particularities of different tumour types. An understanding of the needs, possibilities and limitations of clinical approaches.

**Courses** (type, number of weekly contact hours, language — if other than German)

Clinical Neurobiology | 03-98-MVKN-152-m01

Module coordinator | Module offered by
holder of the Chair of Clinical Neurobiology | Faculty of Medicine

ECTS | Method of grading | Only after succ. compl. of module(s)
--- | --- | ---
5 | numerical grade | --

Duration | Module level | Other prerequisites
--- | --- | ---
1 semester | graduate | --

Contents
Students will get a theoretical introduction to neurobiology and clinical neurobiology. The following topics will be discussed: introduction to neurons and glia, ion channels and membrane potential, ion channelopathies, synapses, transmitter release, NMJ, myasthenia gravis, cerebellum, basal ganglia, ataxia and Morbus Parkinson, somatosensory system, touch, pain, schizophrenia and autism spectrum disorders, disorders of cognition, muscle and muscle diseases, anatomy and function of the motor system, spinal reflexes, motoneuron diseases, hippocampus, learning and memory, anterograde amnesia, visual agnosia, cortex and the limbic system, emotions, disorders of conscious and unconscious mental processes, attention, smell and taste and hearing, sleep, EEG, epilepsy, vision and diseases of the visual system. The literature seminars are based on fundamental literature on lecture-relevant topics to document the experiments underlying our present knowledge in neurobiology.

Intended learning outcomes
Students who successfully completed this module will have acquired insights into current theoretical concepts in neurobiology. They will have examined clinical aspects of neurobiology with a focus on the molecular, cellular and physiological mechanisms. Additionally, they will have learned how to evaluate and present data in oral form. The students will have learned to critically read scientific publications in the field of neurobiology and will have been trained in the ability to extract relevant information from the original literature.

Courses (type, number of weekly contact hours, language — if other than German)

Contents

Cell culture techniques, fundamentals of tissue engineering, test systems as an alternative to animal experiments in skin, intestine, lung, trachea, kidney, blood-brain barrier, tumours and other diseases, development of cell-based transplants, regulatory fundamentals for approval of medical products and drugs. These are REACH (registration, evaluation, restriction and approval of drugs), medicine products law, GLP (good lab practice), GMP (good manufacturing practice), GCP (good clinical practice).

Intended learning outcomes

Students have developed a knowledge of cell biology, metabolism, differentiation, adhesion to surfaces, mechanobiology. They are familiar with the fundamental principles of tissue engineering and quality management.

Courses (type, number of weekly contact hours, language — if other than German)

**Module level**
Graduate

**Other prerequisites**
--

**Contents**
Participants of the module read predetermined papers from a specific subject area of life sciences related to biochemistry. In a rotation mode each participant presents these publications in plenary sessions, followed by a critical discussion of the content presented. The suitability (regarding subject and level) of a given literature seminar has to be clarified with the module coordinator in advance.

**Intended learning outcomes**
The students train their abilities in reading and critical questioning current literature of the life sciences with relation to the biochemistry. They improve their skills in presenting and arguing of scientific contents.

## Contents

The module "Macromolecular Crystallography" consists of lectures, exercises and a practical course. The lecture series covers the following topics: Biophysical characterization of protein samples prior to crystallization; crystallization by various techniques, either by manual or high throughput operation; properties and production of X-rays and their production by means of X-ray generators and synchrotron sources; data collection with various detector systems; symmetry properties of molecules, point groups and space groups; description of the phase problem and solving this problem by means of multiple isomorphous replacement, anomalous diffraction and molecular replacement; improving experimentally determined phases by solvent flattening and molecular averaging; manual and automatic model building; refinement procedures and analysis of experimentally determined structures. In the exercises the topics covered in the lectures will be recapitulated with the help of problem sets. In the practical course, the students will carry out all steps discussed in the lecture series, which are necessary for the determination of a protein structure using lysozyme as an example; starting with the crystallization of the purified protein, data collection using the in-house diffractometer, the solution of the phase problem on the basis of the anomalous signal of the intrinsic sulfur atoms, model building, structure refinement and, finally, the analysis of the refined structure.

## Intended learning outcomes

Participants will acquire extensive knowledge in modern macromolecular crystallographic methods. The basics of the method are presented in great depth in the lectures, the intellectually most demanding aspects are reiterated in the exercises and the practical approach will be explained in detail in the practical course. Participants are thus put in a position to be able to take on a crystallographic structure analysis as part of their master’s or PhD studies.

Contents

The module "Mass Spectrometry and Proteomics" includes a lecture, which teaches the basics of mass spectrometry of biomolecules. There, inter alia, the gentle ionization ESI and MALDI, and the functional principles of different mass analyzers such as TOF and Orbitrap are discussed. The lecture part gives an introduction to the mass spectrometric fragmentation techniques CID and ETD, into separation techniques for peptides and proteins, as well as to the analysis of mass spectrometric data (protein databases, FDR, GO terms, etc.). Furthermore, an overview of the field of quantitative proteomics is given; especially different methods of quantification by stable isotopes (SILAC, N15-Labeling, iTRAQ, etc.) will be discussed. Finally, the lecture gives insights in the mass spectrometric analysis of posttranslational modifications. The seminar part of the module imparts fundamentals of mass spectrometric analysis data. To this end, the participants will be introduced to different software packages and then work independently on exemplary data sets to find solutions for different tasks. In the practical part of the module, participants will isolate a protein complex from yeast by affinity purification. This complex is separated by 1D-SDS-PAGE and proteolytically cleaved in the gel. The peptides obtained are analyzed by nanoLC-MS / MS. Finally data analysis is conducted with the aim of identifying specific interaction partners and post-translational modifications.

Intended learning outcomes

On a broad basis, participants are taught the theoretical foundations of mass spectrometric analysis of proteins and proteomes. In the seminar, participants learn how to use data analysis software in the field of proteomics. In the practical part, students will learn affinity purification of a protein complex, and typical steps of sample preparation for mass spectrometric protein analysis, such as SDS-PAGE and in-gel digestion. Participants get an insight into the operation of a nanoHPLC-coupled mass spectrometer.

Contents

The module "Protein Biophysics" will provide participants with detailed insights into the biophysical characterization of proteins. We will deal both with soluble model proteins (Dr. Sonja Lorenz) and with the particular challenges of membrane protein research (Dr. Sebastian Geibel). The module contains a lecture part that deals with the basics of different biophysical methods to characterize protein stability, oligomerization behavior and shape. Among others, small angle X-ray scattering (SAXS), circular dichroism (CD) spectroscopy, fluorimetry (DSC) and light scattering (DLS + MALS) are discussed. The lectures will be complemented by short presentations on selected topics. In the practical part of the course, the techniques discussed will be applied using self-isolated proteins, data will be analysed with computer support and interpreted scientifically.

Intended learning outcomes

The participants get an overview of the manifold biophysical methods for characterizing proteins and the particularities of working with membrane proteins. The acquired knowledge ranges from the theoretical basics of the methods to their practical application to the scientific analysis and interpretation of the data and should give a realistic impression of the researcher's life.

### Contents

The module "Electron Microscopy and Image Processing in Structural Biology" contains a lecture part which explains the basics of electron microscopy and image processing. First, the components of the electron microscope, beam path, image formation and contrast transmission are explained. Subsequently, different methods of sample preparation for electron microscopy in structural biology will be discussed as well as strategies for instrument alignment and data acquisition. The second part of the lecture concentrates on the processing of image data. The focus is on the principles of single image analysis. This includes the alignment of image data, their classification and three-dimensional image reconstruction. DeNovo and iterative methods of 3D image reconstruction are discussed. The learned principles are then applied to the special cases of 2D crystal analysis and tomography. Finally, micro electron diffraction is presented as an alternative to X-ray structure analysis. In the seminar part of the module some aspects of the lecture are deepened on the basis of case studies from the literature. The students will read these case studies in advance. In this work they are guided through a catalogue of questions. Some of the questions will be addressed independently in a written homework in advance. Most case studies will be presented by one student each. All case studies will be explained in a discussion. The participants develop a critical understanding of the advantages and limitations of the method. Some selected topics will be further deepened by arithmetic exercises.

### Intended learning outcomes

The participants will learn the theoretical basics of electron microscopy and image processing in structural biology on a broad basis. They will get an overview of key strategies of the method, which are essential for structure elucidation. These can be applied and deepened in a practical course. In the end, all participants will be able to understand, communicate and critically evaluate primary literature on this method.

Contents
The module "Practical Course Electron Microscopy and Single Image Processing" consists of an electron microscopy part and an image processing part. In the electron microscopy part the participants get to know the different elements of the electron microscope and how they work. Aspects of alignment, focusing and data acquisition will be developed. The participants will then use different preparation methods for electron microscopy (grid preparation, negative contrast and vitrification). The samples are then imaged in an electron microscope. Sample and data optimization are developed and data sets are created for further image processing. In the image processing part, the participants are first introduced to general aspects of computer operation under Linux (basic Linux commands, basic shell scripting). On this basis, the participants determine the structure of a protein complex from a real test data set. They learn step by step how to select good images, how to correct data for image-dependent aberrations and how to normalize, mask and filter image data. With the data prepared in this way, the participants will determine the characteristic views of the complex (2D classification) and combine these with various methods to form a DeNovo model. This model is then refined in an iterative process. In the second part of the image processing practical course the participants apply what they have learned to their own data. At the end of the practical course the participants present the different working steps and exchange experiences.

The practical part of the electron microscopy practical course and the image processing practical course on test data will be summarized in a protocol. The results on the own data are presented in the form of a scientific publication, which requires a corresponding literature work and the creation of more complex images.

Intended learning outcomes
The participants will be taught the skills to prepare an already purified biological complex for structure determination with the help of electron microscopy and to independently determine its structure de novo from electron microscopic data. The participants will acquire a practical understanding for the data acquisition at the electron microscope and will be able to plan and carry out a corresponding experiment with technical support in the future. The participants will further develop the following key qualifications in the course: Computer skills (insights into Linux), team skills (working in teams of 2-3 students with varying composition), communication skills (oral and written presentation of results).

**Contents**

This lecture provides a broad overview of biophysical techniques and their applications. The first part of the lecture discusses fundamental aspects of thermodynamics, kinetics and molecular interactions. The course then moves on to discuss biophysical methods that facilitate the investigation of individual cells down to the level of single molecules. Focus is on electromanipulation and dielectric spectroscopy of cells, biomembranes, electrophysiology, ion channels, protein folding, single-molecule fluorescence methods and high-resolution as well as dynamic microscopy.

**Intended learning outcomes**

Students will have acquired a knowledge of fundamental biophysical methods and their applications that will enable them to independently review relevant literature. In addition, they will have become acquainted with - or, where necessary, will be able to independently acquaint themselves with - biophysical mechanisms.

**Courses** (type, number of weekly contact hours, language — if other than German)

V (2) + S (1)

Module taught in: English

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Students will be informed about the method, length and scope of the assessment prior to the course. Usually, one of the following options will be chosen: a) written examination (30 to 60 minutes, including multiple choice questions) or b) oral examination of one candidate each (30 to 60 minutes) or c) oral examination in groups of up to 3 candidates (30 to 60 minutes)

Language of assessment: German and/or English

**Contents**
Participants of the module read predetermined papers from a specific subject area of life sciences related to biochemistry. In a rotation mode each participant presents these publications in plenary sessions, followed by a critical discussion of the content presented. The suitability (regarding subject and level) of a given literature seminar has to be clarified with the module coordinator in advance.

**Intended learning outcomes**
The students train their abilities in reading and critical questioning current literature of the life sciences with relation to the biochemistry. They improve their skills in presenting and arguing of scientific contents.

### Contents

The internship is carried out at universities abroad and can be embedded within offered study programs (e.g., Erasmus). The content requirements should comply with those of the electives of the Biochemistry Master program at the University of Würzburg (what has to be ascertained in advance under discussion with the module coordinator).

### Intended Learning Outcomes

The students are familiar with working methods at universities abroad. Besides professional competences they have also acquired language and social skills.

### Courses

(type, number of weekly contact hours, language — if other than German)

No courses assigned to module

### Method of Assessment

(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

- a) log (approx. 20 pages) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups (groups of 2: approx. 30 minutes, groups of 3: approx. 40 minutes) or d) presentation/talk (approx. 15 to 30 minutes)

Language of assessment: German or English

**Contents**

The internship is carried out in a non-university research / diagnostic institution or in a company. The contents of the internship will be determined by the institution. The content requirements shall correspond to an internship offered in the study program of the Biochemistry Master program at the University of Würzburg, what has to be defined in advance in consultation with the module coordinator.

**Intended learning outcomes**

Students are acquainted with the structures of non-university institutions and possess specific professional skills.

### Contents

The lab course is carried out in a working group with biochemical and / or molecular biology research orientation at the University of Würzburg. The contents of the lab course have to be defined in advance in consultation with the module responsible. The lab course allows intensive training in biochemistry, molecular biology and / or bioinformatics research methods. The experiments and their results are documented in a written protocol.

### Intended learning outcomes

After attending the lab course, the student has advanced methodological knowledge. He/She is able to transfer the methods used in this course on other issues and to assess their applicability. He/She masters the scientifically correct documentation and discussion of experimentation and results.

### Courses

No courses assigned to module

### Method of assessment

a) log (approx. 20 pages) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups (groups of 2: approx. 30 minutes, groups of 3: approx. 40 minutes) or d) presentation/talk (approx. 15 to 30 minutes)

Contents

The module offers the opportunity to learn correct presenting and mediating scientific questions by giving a tutorial attendant to a lecture at the faculty of chemistry and pharmacy.

Intended learning outcomes

The students are able to adequately prepare and present scientific questions, and to guide students in lower semesters.

Courses (type, number of weekly contact hours, language — if other than German)

No courses assigned to module

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Preparing and supervising study groups: assessment to be successfully completed (type and length of assessment to be specified at the beginning of the course)
Language of assessment: German or English

Module title: Bioanorganic Chemistry  
Abbreviation: 08-ACM2-152-m01

Module coordinator: Lecturer of seminar "Anorganische Aspekte der Biochemie und Medizinischen Chemie" (Inorganic Aspects of Biochemistry and Medicinal Chemistry)  
Module offered by: Institute of Inorganic Chemistry

ECTS: 5  
Method of grading: numerical grade  
Only after succ. compl. of module(s): --

Duration: 1 semester  
Module level: graduate  
Other prerequisites: --

Contents:

German contents available but not translated yet.

Das Modul führt in die Grundlagen der Bioanorganischen Chemie (BIC) ein. Es werden die Methoden der BIC, Struktur und Wirkungsweise Metall-haltiger Enzyme sowie Anwendungen der BIC als Diagnostika und Therapeutika behandelt.

Intended learning outcomes:

German intended learning outcomes available but not translated yet.

Courses:

(S, 3)

Method of assessment:

(a) written examination (approx. 45 to 90 minutes) or (b) oral examination of one candidate each (20 to 30 minutes) or (c) oral examination in groups of up to 3 candidates (15 to 30 minutes per candidate)

Language of assessment: German and/or English

### Contents
Advances and current results of bioinformatics are explained and discussed, this includes results from genome and sequence analysis, protein domains and protein families, large-scale data analysis (e.g. net generation sequences, proteomics data), analysis of different functional RNAs (e.g. miRNAs, lncRNAs).

### Intended learning outcomes
Understand recent results in bioinformatics. Discuss their implications. Have an advanced (Master) level knowledge of typical technologies and research questions in bioinformatics.

</table>

### Contents

The module offers the opportunity to learn correct presenting and mediating scientific questions by giving a tutorial attendant to a lecture at the faculty of chemistry and pharmacy.

### Intended learning outcomes

The students are able to adequately prepare and present scientific questions, and to guide students in lower semesters.

### Courses

(type, number of weekly contact hours, language — if other than German)

| T (0) |

### Method of assessment

(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

</tr>
</thead>
<tbody>
<tr>
<td>1 semester</td>
<td>graduate</td>
<td>--</td>
</tr>
</tbody>
</table>

## Contents

Participants of the module read predetermined papers from a specific subject area of life sciences related to biochemistry. In a rotation mode each participant presents these publications in plenary sessions, followed by a critical discussion of the content presented. The suitability (regarding subject and level) of a given literature seminar has to be clarified with the module coordinator in advance.

## Intended learning outcomes

The students train their abilities in reading and critical questioning current literature of the life sciences with relation to biochemistry. They improve their skills in presenting and arguing of scientific contents.

### Contents

The internship is carried out at universities abroad and can be embedded within offered study programs (e.g., Erasmus). The content requirements should comply with those of the electives of the Biochemistry Master program at the University of Würzburg (what has to be ascertained in advance under discussion with the module coordinator).

### Intended learning outcomes

The students are familiar with working methods at universities abroad. Besides professional competences they have also acquired language and social skills.

### Courses

No courses assigned to module

### Contents
The lab course is carried out in a working group with biochemical and / or molecular biology research orientation at the University of Würzburg. The contents of the lab course have to be defined in advance in consultation with the module responsible. The lab course allows intensive training in biochemistry, molecular biology and / or bioinformatics research methods. The experiments and their results are documented in a written protocol.

### Intended learning outcomes
After attending the lab course, the student has advanced methodological knowledge. He/She is able to transfer the methods used in this course on other issues and to assess their applicability. He/She masters the scientifically correct documentation and discussion of experimentation and results.

### Courses
No courses assigned to module

### Method of assessment

**Contents**

The lab course is carried out in a working group with biochemical and / or molecular biology research orientation at the University of Würzburg. The contents of the lab course have to be defined in advance in consultation with the module responsible. The lab course allows intensive training in biochemistry, molecular biology and / or bioinformatics research methods. The experiments and their results are documented in a written protocol.

**Intended learning outcomes**

After attending the lab course, the student has advanced methodological knowledge. He/She is able to transfer the methods used in this course on other issues and to assess their applicability. He/She masters the scientifically correct documentation and discussion of experimentation and results.

**Courses**

(type, number of weekly contact hours, language — if other than German)

No courses assigned to module

**Method of assessment**

(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

a) log (approx. 20 pages) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups (groups of 2: approx. 30 minutes, groups of 3: approx. 40 minutes) or d) presentation/talk (approx. 15 to 30 minutes)

Language of assessment: German or English

**Allocation of places**

**Contents**

Advances and current results of bioinformatics are explained and discussed, this includes results from genome and sequence analysis, protein domains and protein families, large-scale data analysis (e. g. net generation sequences, proteomics data), analysis of different functional RNAs (e. g. miRNAs, lncRNAs).

**Intended learning outcomes**

Understand recent results in bioinformatics. Discuss their implications. Have an advanced (Master) level knowledge of typical technologies and research questions in bioinformatics.

**Courses**

(type, number of weekly contact hours, language — if other than German)

V (2) + S (1)

Module taught in: German and/or English

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Students will be informed about the method, length and scope of the assessment prior to the course. Usually, one of the following options will be chosen: a) written examination (30 to 60 minutes, including multiple choice questions) or b) oral examination of one candidate each (30 to 60 minutes) or c) oral examination in groups of up to 3 candidates (30 to 60 minutes)

Language of assessment: German and/or English

**Contents**

Participants of the module read predetermined papers from a specific subject area of life sciences related to biochemistry. In a rotation mode each participant presents these publications in plenary sessions, followed by a critical discussion of the content presented. The suitability (regarding subject and level) of a given literature seminar has to be clarified with the module coordinator in advance.

**Intended learning outcomes**

The students train their abilities in reading and critical questioning current literature of the life sciences with relation to the biochemistry. They improve their skills in presenting and arguing of scientific contents.

**Courses** (type, number of weekly contact hours, language — if other than German)

Contents

Basics on human genetics (inheritance patterns, mutation types, etc.), hereditary cancer (breast & ovarian cancer, HNPCC, FAP, etc.), cancer syndromes, tumor cytogenetics, epigenetics in cancer, animal models in cancer genetics, genetic techniques (NGS, genome engineering, etc.)

Intended learning outcomes

The students have acquired broad knowledge in the field of tumor genetics and hereditary tumor diseases as well as specific knowledge about genetic methods. They are able to apply this acquired knowledge to scientific questions in tumor genetics. Students can independently develop scientific texts, discuss them critically and present them.

Courses

(type, number of weekly contact hours, language — if other than German)

V (1) + S (1)

Module taught in: English

Method of assessment

(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

a) written examination (approx. 45 to 90 minutes) or b) log (20 to 30 pages) or c) oral examination of one candidate each (20 to 30 minutes) or d) oral examination in groups of up to 3 candidates (15 to 30 minutes per candidate) or e) presentation (20 to 40 minutes)  

Language of assessment: German and/or English

## Module title

Special lectures 1

### Abbreviation

08-MBC-FTSV1-152-m01

## Module coordinator

Chairperson of examination committee Biochemie (Biochemistry)

## Module offered by

Chair of Biochemistry

## ECTS

5

### Method of grading

Only after succ. compl. of module(s)

### (not) successfully completed

--

## Duration

1 semester

### Module level

Graduate

### Other prerequisites

Please consult with degree programme coordinator in advance.

## Contents

The module allows participation in a lecture with a thematic scope and relation to the selected major field of study. This lecture provides a special subject-related expansion of scientific knowledge. The lecture may be offered internally or externally of the University of Würzburg. Recognition as academic achievement is conducted in an individual assessment by the examination board.

## Intended learning outcomes

The student has improved scientific knowledge, which contributes to the sharpening of specific qualifications. In particular, he/she gained additional expertise that contributes to individual specialization.

Module title
Bioanorganic Chemistry

Abbreviation
08-ACM2-152-m01

Module coordinator
Lecturer of seminar "Anorganische Aspekte der Biochemie and Medizinischen Chemie" (Inorganic Aspects of Biochemistry and Medicinal Chemistry)

Module offered by
Institute of Inorganic Chemistry

ECTS
5

Method of grading
Numerical grade

Only after succ. compl. of module(s)
--

Duration
1 semester

Module level
Graduate

Other prerequisites
--

Contents
German contents available but not translated yet.

Das Modul führt in die Grundlagen der Bioanorganischen Chemie (BIC) ein. Es werden die Methoden der BIC, Struktur und Wirkungsweise Metall-haltiger Enzyme sowie Anwendungen der BIC als Diagnostika und Therapeutika behandelt.

Intended learning outcomes
German intended learning outcomes available but not translated yet.

Courses
(S, 3)

Method of assessment
A) written examination (approx. 45 to 90 minutes) or B) oral examination of one candidate each (20 to 30 minutes) or C) oral examination in groups of up to 3 candidates (15 to 30 minutes per candidate)

Language of assessment: German and/or English

**Contents**

Advances and current results of bioinformatics are explained and discussed, this includes results from genome and sequence analysis, protein domains and protein families, large-scale data analysis (e.g. net generation sequences, proteomics data), analysis of different functional RNAs (e.g. miRNAs, lncRNAs).

**Intended learning outcomes**

Understand recent results in bioinformatics. Discuss their implications. Have an advanced (Master) level knowledge of typical technologies and research questions in bioinformatics.

**Courses** (type, number of weekly contact hours, language — if other than German)

V (2) + S (1)

Module taught in: German and/or English

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Students will be informed about the method, length and scope of the assessment prior to the course. Usually, one of the following options will be chosen: a) written examination (30 to 60 minutes, including multiple choice questions) or b) oral examination of one candidate each (30 to 60 minutes) or c) oral examination in groups of up to 3 candidates (30 to 60 minutes)

Language of assessment: German and/or English

Module title
Scientific lecturing M₁
Abbreviation
08-MBC-WR1-152-m01

Module coordinator
Chairperson of examination committee Biochemie (Biochemistry)

Module offered by
Chair of Biochemistry

ECTS
5

Method of grading
Only after succ. compl. of module(s)

Duration
1 semester

Module level
Graduate

Other prerequisites
--

Contents
The module offers the opportunity to learn correct presenting and mediating scientific questions by giving a tutorial attendant to a lecture at the faculty of chemistry and pharmacy.

Intended learning outcomes
The students are able to adequately prepare and present scientific questions, and to guide students in lower semesters.

Courses
(T, o)

Method of assessment
Preparing and supervising study groups, wrap-up report (approx. 2 pages)
Language of assessment: German and/or English

Allocation of places

Contents
Participants of the module read predetermined papers from a specific subject area of life sciences related to biochemistry. In a rotation mode each participant presents these publications in plenary sessions, followed by a critical discussion of the content presented. The suitability (regarding subject and level) of a given literature seminar has to be clarified with the module coordinator in advance.

Intended learning outcomes
The students train their abilities in reading and critical questioning current literature of the life sciences with relation to the biochemistry. They improve their skills in presenting and arguing of scientific contents.

**Contents**
The module enables the processing of a defined problem within a specified period by applying the scientific methods learned in the course of study.

**Intended learning outcomes**
The student can familiarize oneself on the basis of scientific literature with the current state of research on a given topic. He/She has the ability to process a defined problem / issue using scientific methods and to document the results, to analyse and to interpret them, and to integrate them into the context of the literature in a written thesis.
