## Content and Objectives of the Programme

The comprehension of conceptual ways of process functioning and process flows is today more important than ever before. Therefore professionals who are well grounded in this area are crucial for a national economy. The interdisciplinary course of studies »Business Information Systems« conveys knowledge on efficient and profitable business.

»Business Information Systems« comprises the two disciplines: business management und informatics, and at the same time it places special emphasis on the integration of economic processes and informational automatisisation. The curriculum of the Bachelor of Science offers the students basic knowledge which is deepened and broadened in the consecutive Master programme.

The target of the programme is to learn academically grounded methods as well as up-to-date research methods. Practical applications are also part of the programme, for instance in the research project VULCAN. Here the students work as administrators, department heads or executive directors in an ERP-system of the model company LIVE PLC and act in a virtual world as a company. Within a mandatory internship students additionally build up capabilities for teamwork as well as planning, shaping, and implementing a project. Here skills such as analysis of business transactions, various approaches of problem solving and the independent work will be developed. Students have the freedom to develop creative and innovative concepts themselves and work on various solutions.

The specialized education and the training of social competences enable students to get insight into various fields of their future professional work. The students learn the basics in order to adapt themselves to the dynamic discipline in a quick and flexible manner.

The students should demonstrate in their written Master thesis and their previous academic papers that they are capable of working on a defined topic from the field of business information systems in limited time. Defining a theme, working on it by means of obtained academic methods as well as developing students' own ideas are crucial for the study. In this way they obtain the know-how and prerequisites necessary for a potential PhD qualification.

## Abbreviations used

Course types: **E** = field trip, **K** = colloquium, **O** = conversatorium, **P** = placement/lab course, **R** = project, **S** = seminar, **T** = tutorial, **Ü** = exercise, **V** = lecture

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B/NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programmes), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: **A** = thesis, **LV** = course(s), **PL** = assessment(s), **TN** = participants, **VL** = prerequisite(s)

## Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

## Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

## In accordance with

the general regulations governing the degree subject described in this module catalogue:

**ASPO2007**

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

**17-Aug-2011 (2011-80)**

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

## Compulsory Courses

(50 ECTS credits)

## **Compulsory Courses Business Sciences**

(10 ECTS credits)

| <p>Content:<br/>Underlying value is referred to as fundamental value, the analysis of information about fundamental value is referred to as fundamental analysis. This module discusses fundamental analysis. Fundamental analysis was developed as a matter of appropriate financial statement analysis.</p> <p>Outline of syllabus:</p> <ol style="list-style-type: none"> <li>1. Introduction: investing, valuation and financial statements</li> <li>2. How financial statements are used in valuation</li> <li>3. Cash accounting, accrual accounting and discounted cash flow valuation: pricing book values</li> <li>4. Viewing business through the financial statement lens</li> <li>5. Analysis of the balance sheet and income statement</li> <li>6. Analysis of the cash flow statement</li> <li>7. Analysis of profitability</li> <li>8. The value of operations and the evaluation of enterprise price-to-book-ratios and price-earnings-ratios</li> </ol> <p>Reading:<br/>Penman, Stephen H.: Financial Statement Analysis and Security Valuation (most recent edition).</p> |                          |  |
| <b>Intended learning outcomes</b>   |                          |  |
| The students should be able to analyze financial statements and to value businesses and business strategies using the best technologies available. They should be able to sort out what are good methods, i.e. practical as well as conceptually sound, and what are poor ones. They should demonstrate their knowledge in applying the methods on real cases.  |                          |  |

| <p>Description:<br/>This lecture deals with the allocative tasks of the government in a market economy. In this context, the lecture will first develop the theory of market failure and will then describe the positive effects government activities have on such market allocations.</p> <p>Outline of syllabus:<br/>1. Allocative foundations of welfare economics<br/>2. External effects<br/>3. Public goods</p> |                          |  |
| <b>Intended learning outcomes</b>  |                          |  |
| After completing the course "Microeconomics 3" students know the concept of efficiency and when a market economy satisfies these conditions. They are able to discuss the central role of government in a market economy and to apply these arguments to specific public policies (i.e. environmental policy). Of course, students should also be aware of the limitations of government interventions.                |                          |  |

| 1 semester   | undergraduate  | --   |
| <b>Contents</b>  |  |  |
| <p><b>Description:</b> Students will become familiar with the basic principles of stochastic models and stochastic analysis in risk management. The Six Sigma developed in industrial statistics is used for orientation within the topic of risk analysis: identify risks, measure risks, identify risk status on the basis of measurements, improve risk status through measures to monitor risk status. The required steps are presented and discussed with reference to the preceding course "RMZ 1 - Risikomanagement" ("RMZ 1 - Risk Management"). Operational exercises are carried out with the statistical analysis package Statistica</p> <p><b>Outline of syllabus:</b></p> <ol style="list-style-type: none"> <li>1. The Six Sigma Scheme for risk analysis</li> <li>2. Risk measurement</li> <li>3. Risk analysis, determination of risk status</li> <li>4. Stochastic aid for measures to improve risk status</li> <li>5. Monitoring of risk status</li> </ol> |  |  |
| <b>Intended learning outcomes</b>  |  |  |
| <p>The course has three goals:</p> <ol style="list-style-type: none"> <li>1. Participants will receive a structured overview of the stochastic methods of risk management.</li> <li>2. Participants will be able to adequately assess the potential and the obviousness of stochastic methods in the context of Risk Management.</li> <li>3. Participants have the basics of operationalization stochastic methods.</li> </ol>   |  |  |
| <b>Courses</b> (type, number of weekly contact hours, language — if other than German)   |  |  |
| <p>This module comprises 2 module components. Information on courses will be listed separately for each module component.</p> <ul style="list-style-type: none"> <li>• 12-RM-MM-1-072: V (no information on SWS (weekly contact hours) and course language available)</li> <li>• 12-RM-MM-2-072: V (no information on SWS (weekly contact hours) and course language available)</li> </ul>   |  |  |
| <b>Method of assessment</b> (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)   |  |  |
| <p>Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.</p> <p><b>Assessment in module component 12-RM-MM-1-072: Stochastic Models for Risk Analysis</b></p> <ul style="list-style-type: none"> <li>• 2 ECTS, Method of grading: numerical grade</li> <li>• written examination (60 minutes)</li> </ul> <p><b>Assessment in module component 12-RM-MM-2-072: Financial Reporting and Risk Management</b></p> <ul style="list-style-type: none"> <li>• 3 ECTS, Method of grading: numerical grade</li> </ul>  |  |  |

| <p><b>Business Suite:</b> The constantly changing environment with its organisational and IT-oriented developments forces companies to adapt their standard business software solutions. With the help of dynamic adaptation (Continuous System Engineering), this process of change can be supported effectively and efficiently. This module discusses both the systematic implementation of adaptation steps (so-called customising) using the example of the mySAP Business Suite and the concept of Continuous System Engineering using various practical examples. <b>Business Apps:</b> The course combines theory and practice in the area of cloud computing and ERP. Participants gain an insight into the architecture of the ByDesign platform and are presented with an opportunity to gain practical experience working with the corresponding software development kit.</p> <p>Content:</p> <ul style="list-style-type: none"> <li>- Fundamentals of cloud computing</li> <li>- Cloud business solutions</li> <li>- Architecture of the SAP Business ByDesign platform</li> <li>- Platform adaption and extensibility</li> <li>- Basics of software development in SAP Cloud Applications Studio</li> <li>- Hands-on SDK: independently designing and developing a demo app</li> </ul> |  |  |
| <b>Intended learning outcomes</b>   |  |  |
| <p>Business Suite: Students learn about the various ways of adapting a standard business software solution to the special requirements of a company. They also develop a fundamental understanding of the dynamic adaptation of business software libraries. Based on selected examples from the SAP Business Suite that the acquired knowledge will be deepened by using case studies. Business Apps: The course imparts knowledge and delivers skills in cloud computing for businesses, ERP systems architecture and software development at the example of the SAP Business ByDesign platform. The independent planning, implementation and documentation of a business app trains important core competencies of technology-oriented Business Informatics.</p>   |  |  |

| <b>Allocation of places</b>   |  |  |
| <p>Number of places: 20. Should the number of applications exceed the number of available places, 15 places will be set aside for Master's students of Business Information Systems. (1) Should the number of applications exceed the number of available places, places will be allocated in a standardised procedure among all applicants irrespective of their subjects according to the following quotas: Quota 1 (50% of places): total number of ECTS credits already achieved in the respective degree subject; among applicants with the same number of ECTS credits achieved, places will be allocated by lot. Quota 2 (25% of places): number of subject semesters of the respective applicant; among applicants with the same number of subject semesters, places will be allocated by lot. Quota 3 (25% of places): allocation by lot. In this procedure, applicants who already have successfully completed at least one module component of the respective module will be given preferential consideration. (2) Pla-</p>  |  |  |

| <p>ERP systems have become key elements of successful companies. Business processes in companies can no longer be managed without using such ERP systems. In financial departments of companies, such systems have been used for a long time, but business processes e. g. for logistical tasks have so far not been supported by ERP solutions. This module explains how this issue could be resolved as well as what constraints and what dependencies have to be considered.</p>   |                          |  |

| <p>A next generation of enterprise systems called business service platforms is emerging using new disruptive technologies such as cloud computing, big data and mobility. These business service platforms apply the concept of product platforms to software. They will</p> <ol style="list-style-type: none"> <li>1. be services based</li> <li>2. be offered as a service in the cloud</li> <li>3. address new classes of users and types of business especially in the service business</li> <li>4. allow for a high degree of business adaptability and extensibility.</li> <li>5. be supplemented by a broad offer of partner add-ons supporting accelerated innovation.</li> </ol> <p>These new business service platforms will play a key role in the digital transformation of the software industry.</p> |                          |  |
| <b>Intended learning outcomes</b>   |                          |  |
| <p>Be aware of the big business productivity progress enabled by BIS in the last 50 years. Understand the limitations of these systems in spite of the digital transformation of the software industry ahead. Be able to critically assess the business potential of new IC technologies. Understand the business demand for change. Understand the necessary organizational learning needed to leverage new technology for business change management.</p>   |                          |  |

| <b>Duration</b>   | <b>Module level</b>      | <b>Other prerequisites</b>  |
| 1 semester  | graduate                 | By way of exception, additional prerequisites are listed in the section on assessments. |
| <b>Contents</b>   |                          |   |
| <p>Students will complete their degree with a Master's thesis in which they will be required to independently research and write on a topic in the area of business management and economics, drawing on the subject-specific knowledge they have acquired and adhering to the principles of good scientific practice. This thesis may either take the form of an analysis and structured presentation of the existing literature on a certain topic or may, as is often the case, also include a presentation of the students' own original achievements, e. g. new algorithms developed by students, surveys, the prototypical demonstration of a concept they developed or the application and (further) development of a theoretical model.</p>   |                          |   |
| <b>Intended learning outcomes</b>   |                          |   |
| <p>In the master thesis students prove that they can plan and carry out a science-based work to solve a particular problem within a specified period autonomously and to document the results in accordance with the professional scientific standards in writing. Students are able to understand relevant contributions to research and professional practice, critically analyze and assess the relevance to their own specific questions. They can assess and recognize major lines of development and dynamics of the subject and therefore also the need to retrain continuously.</p>   |                          |   |
| <b>Courses</b> (type, number of weekly contact hours, language — if other than German)  |                          |   |
| <p>This module comprises 2 module components. Information on courses will be listed separately for each module component.</p> <ul style="list-style-type: none"> <li>• 12-WI-MA-1-072: no courses assigned</li> <li>• 10-I-MA-1-072: no courses assigned</li> </ul>   |                          |   |
| <b>Method of assessment</b> (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)  |                          |   |
| <p>Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.</p> <p><b>Assessment in module component 12-WI-MA-1-072: Master Thesis Business Information Systems</b></p> <ul style="list-style-type: none"> <li>• 30 ECTS, Method of grading: numerical grade</li> <li>• written thesis</li> <li>• Language of assessment: German or English</li> <li>• Other prerequisites: Registration for assessment on a continuous basis as agreed upon with supervisor. Topic to be selected in consultation with supervisor. Topic to be assigned by examination committee (Section 21 Subsection 3 ASPO (general academic and examination regulations)).</li> </ul> <p><b>Assessment in module component 10-I-MA-1-072: master thesis</b></p> <ul style="list-style-type: none"> <li>• 30 ECTS, Method of grading: numerical grade</li> <li>• written thesis</li> <li>• Language of assessment: German or English</li> <li>• Other prerequisites: Registration for assessment on a continuous basis as agreed upon with supervisor. Topic to be selected in consultation with supervisor. Topic to be assigned by examination committee (Section 21 Subsection 3 ASPO (general academic and examination regulations)).</li> </ul> |                          |   |
