Content and Objectives of the Programme
The Faculty of Medicine and the Faculty of Biology of the JMU Würzburg offer the opportunity to acquire a “Master of Science” (M.Sc.) degree in Biomedicine within a consecutive Bachelor’s and Master’s programme. This degree programme has a strong emphasis on research. This Master of Science degree equips graduates with further professional qualifications as well as extensive research experience. This degree programme aims to impart to students in-depth and interdisciplinary knowledge at the interface between biology and medicine and to enable them to competently apply and implement concepts and methods of molecular medicine. Students in this degree programme gain the skills and specialist knowledge necessary for a career in research, development and practical application and will be able to independently conduct scientific research in the field of biomedicine.

In their thesis, students demonstrate their ability to illustrate and handle a defined biomedical problem from an academic perspective using established or modified methods within a given time frame.
Abbreviations used

Course types: E = field trip, K = colloquium, O = conversatorium, P = placement/lab course, R = project, S = seminar, T = tutorial, Ü = exercise, V = lecture

Term: SS = summer semester, WS = winter semester

Methods of grading: NUM = numerical grade, B/NB = (not) successfully completed

Regulations: (L)ASPO = general academic and examination regulations (for teaching-degree programmes), FSB = subject-specific provisions, SFB = list of modules

Other: A = thesis, LV = course(s), PL = assessment(s), TN = participants, VL = prerequisite(s)

Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

In accordance with

the general regulations governing the degree subject described in this module catalogue:

   ASPO2015

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

   7-Mar-2018 (2018-7)

   24-Mar-2020 (2020-23)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

--- | graduate | --

Contents
With the help of selected eukaryotic model organisms (mouse, fish, Drosophila, nematodes and flatworms, yeast) and complex tissue models, students will become familiar with methods and questions of experimental biomedicine and will apply these. Building on the students' knowledge of anatomy, cell biology and developmental biology, the module will illustrate the relevance and usage of individual models for understanding physiological processes and pathophysiological changes and will experimentally analyse these with molecular, cell biological, histological and imaging techniques. The module will acquaint students with cell-based strategies for regenerative therapies and biodiagnostics as well as as an alternative to animal experiments. Over the course of one week each, students will examine model organisms in detail, also taking into account current research.

Intended learning outcomes
Students are able to define key terms for each model organism and use them in the right context. They are able to correctly assess the importance of model organisms and 3D tissue culture systems for current biomedical issues and questions. They are able to discuss the relevant scientific advantages and disadvantages in a deliberative manner, also taking into account ethical issues. Under supervision, they are able to independently perform sophisticated genetic, cell biological and histological experiments and document the results. In particular, they are able to present the results in a written report in accordance with scientific standards, to critically evaluate and interpret the data and put it in the context of current literature. Working in small groups as well as preparing and delivering group presentations, they demonstrate their knowledge of the contents covered as well as their team working skills.

Courses (type, number of weekly contact hours, language — if other than German)
S (3) + P (15)
Module taught in: German/English

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)
Log (30 to 60 pages)
Assessment offered: Once a year, winter semester
Language of assessment: German or English

Contents

Students will get a theoretical introduction to neurobiology and clinical neurobiology. The following topics will be discussed: introduction to neurons and glia, ion channels and membrane potential, ion channelopathies, synapses, transmitter release, NMJ, myasthenia gravis, cerebellum, basal ganglia, ataxia and Morbus Parkinson, somatosensory system, touch, pain, schizophrenia and autism spectrum disorders, disorders of cognition, muscle and muscle diseases, anatomy and function of the motor system, spinal reflexes, motoneuron diseases, hippocampus, learning and memory, anterograde amnesia, visual agnosia, cortex and the limbic system, emotions, disorders of conscious and unconscious mental processes, attention, smell and taste and hearing, sleep, EEG, epilepsy, vision and diseases of the visual system. The literature seminars are based on fundamental literature on lecture-relevant topics to document the experiments underlying our present knowledge in neurobiology.

Intended learning outcomes

Students who successfully completed this module will have acquired insights into current theoretical concepts in neurobiology. They will have examined clinical aspects of neurobiology with a focus on the molecular, cellular and physiological mechanisms. Additionally, they will have learned how to evaluate and present data in oral form. The students will have learned to critically read scientific publications in the field of neurobiology and will have been trained in the ability to extract relevant information from the original literature.

Contents
Molecular mechanisms of tumourigenesis; experimental dissection of tumours; metabolic reprogramming in cancer; visualising in vivo tumour progression and response to therapy; targeting Myc for tumour therapy; Wnt signalling and colorectal cancer; cell cycle and tumour suppressor genes; protein turnover in normal and cancer cells; molecular mechanisms of melanoma development; tumour immunology; stem cells and epigenetics; signal transduction and personalised cancer therapy; molecular pathology; infections and tumour development.

Intended learning outcomes
Students understand the current topics and challenges in tumour research and the methods used to address such challenges.

**Contents**

Cell culture techniques, fundamentals of tissue engineering, test systems as an alternative to animal experiments in skin, intestine, lung, trachea, kidney, blood-brain barrier, tumours and other diseases, development of cell-based transplants, regulatory fundamentals for approval of medical products and drugs. These are REACH (registration, evaluation, restriction and approval of drugs), medicine products law, GLP (good lab practice), GMP (good manufacturing practice), GCP (good clinical practice).

**Intended learning outcomes**

Students have developed a knowledge of cell biology, metabolism, differentiation, adhesion to surfaces, mechanobiology. They are familiar with the fundamental principles of tissue engineering and quality management.

**Contents**

In the module "Klinische Onkologie" ("Clinical Oncology"), various clinicians will present a current view of the disease "cancer". Topics will include an overview of different tumour entities (including cancers of the blood, skin, breast, lung, liver, colon, endocrine system), treatment modalities (e.g. immunotherapy, radiation-based therapy, personalised medicine), diagnostics, pathology, clinical studies.

**Intended learning outcomes**

An understanding of the biological commonalities and particularities of different tumour types. An understanding of the needs, possibilities and limitations of clinical approaches.

**Courses** (type, number of weekly contact hours, language — if other than German)

V (2)

Module taught in: German or English

**Contents**
Recent progress in molecular and cellular immunology. Deeper insights into selected immunology chapters, such as autoimmunity and immune modulation, development of the immune system, immunogenetics, evolution, infection immunology, and more. This incorporates common literature readings, presentations and tests on selected immunology book chapters and recent original literature.

**Intended learning outcomes**
Students are able to understand current problems in immunology and to discuss these in detail.

**Courses** (type, number of weekly contact hours, language — if other than German)
S (2)  
Module taught in: German/English

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)
a) written examination (30 to 60 minutes) or b) oral examination of one candidate each (30 to 60 minutes) or c) presentation (20 to 45 minutes)
Students will be informed about the method, length and scope of the assessment prior to the course.
Assessment offered: Summer semester only
Language of assessment: German and/or English

Contents

Advances and current results of bioinformatics are explained and discussed, this includes results from genome and sequence analysis, protein domains and protein families, large-scale data analysis (e.g. net generation sequences, proteomics data), analysis of different functional RNAs (e.g. miRNAs, lncRNAs).

Intended learning outcomes

Understand recent results in bioinformatics. Discuss their implications. Have an advanced (Master) level knowledge of typical technologies and research questions in bioinformatics.

Courses (type, number of weekly contact hours, language — if other than German)

V (2)
Module taught in: German and/or English

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Students will be informed about the method, length and scope of the assessment prior to the course. Usually, one of the following options will be chosen: a) written examination (30 to 60 minutes, including multiple choice questions) or b) oral examination of one candidate each (30 to 60 minutes) or c) oral examination in groups of up to 3 candidates (30 to 60 minutes)

Language of assessment: German and/or English

### Contents

The module "Electron Microscopy and Image Processing in Structural Biology" contains a lecture part which explains the basics of electron microscopy and image processing. First, the components of the electron microscope, beam path, image formation and contrast transmission are explained. Subsequently, different methods of sample preparation for electron microscopy in structural biology will be discussed as well as strategies for instrument alignment and data acquisition. The second part of the lecture concentrates on the processing of image data. The focus is on the principles of single image analysis. This includes the alignment of image data, their classification and three-dimensional image reconstruction. Finally, micro electron diffraction is presented as an alternative to X-ray structure analysis. In the seminar part of the module some aspects of the lecture are deepened on the basis of case studies from the literature. The students will read these case studies in advance. In this work they are guided through a catalogue of questions. Some of the questions will be addressed independently in a written homework in advance. Most case studies will be presented by one student each. All case studies will be explained in a discussion. The participants develop a critical understanding of the advantages and limitations of the method. Some selected topics will be further deepened by arithmetic exercises.

### Intended learning outcomes

The participants will learn the theoretical basics of electron microscopy and image processing in structural biology on a broad basis. They will get an overview of key strategies of the method, which are essential for structure elucidation. These can be applied and deepened in a practical course. In the end, all participants will be able to understand, communicate and critically evaluate primary literature on this method.

### Courses

(type, number of weekly contact hours, language — if other than German)

- V (1) + S (1)

**Contents**
The Single Cell Biology course is at the interface of genomics, bioinformatics, biology and pathology. It will give an introduction of the most recent technologies for single cell analysis and an overview of the application of single cell biology across the medical field (cancer, immunology, cardiovascular diseases, and infectious diseases). Practical components will allow the students to be familiarized with the basic tools to perform data analysis.

**Intended learning outcomes**
Students are familiar with fundamental concepts of single cell biology throughout the life sciences and they can apply basic procedures to analyze single cell data sets.

Contents

Students work as tutors. They support other students, in particular in the context of courses and study planning, and they participate as assistants in the organisation and planning of exercises and lab courses.

Intended learning outcomes

Tutors are able to communicate complex technical facts in a clear and structured way. They have gained experience in the supervision and motivation of groups, and they have practised applying conflict resolution strategies.

**Contents**

Students work as tutors. They support other students, in particular in the context of courses and study planning, and they participate as assistants in the organisation and planning of exercises and lab courses.

**Intended learning outcomes**

Tutors are able to communicate complex technical facts in a clear and structured way. They have gained experience in the supervision and motivation of groups, and they have practised applying conflict resolution strategies.

**Courses** (type, number of weekly contact hours, language — if other than German)

T (3)

Module taught in: German/English

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

a) written examination (30 to 60 minutes) or b) log (approx. 10 to 20 pages) or c) oral examination of one candidate each (30 to 60 minutes) or d) oral examination in groups of up to 3 candidates (approx. 30 to 60 minutes) or e) presentation (20 to 45 minutes) or f) preparing and supervising study groups/student lab courses (type and length/scope of assessment to be specified at the beginning of the course). Students will be informed about the method, length and scope of the assessment prior to the course.

Language of assessment: German and/or English

**Module coordinator**
Dean of Studies Biomedizin (Biomedicine)

**Module offered by**
Faculty of Medicine

**ECTS** 2
**Method of grading** Only after succ. compl. of module(s)

**Duration**

- 1 semester

**Module level**
graduate

**Other prerequisites**
May only be taken as an alternative to MKM3.

**Contents**
Attending a lecture on the foundations of clinical medicine for medical students. Contents will vary according to the subject chosen.

**Intended learning outcomes**
Students will gain an insight into clinical practice and will improve their ability to link basic and experimental knowledge with corresponding clinical applications.

**Courses**

- **V (2)**
  Module taught in: German/English

**Method of assessment**

- a) written examination (30 to 60 minutes) or b) log (approx. 10 to 20 pages) or c) oral examination of one candidate each (30 to 60 minutes) or d) oral examination in groups of up to 3 candidates (approx. 30 to 60 minutes) or e) presentation (20 to 45 minutes).

Students will be informed about the method, length and scope of the assessment prior to the course.

### Contents

Project work in a research laboratory, focusing on training in new methods and the in-depth analysis of a complex scientific problem. This project may lay the foundation for a subsequent Master's thesis.

### Intended learning outcomes

Execution of complex sequential experimental methods. Students gain an insight into new areas of research on the basis of current literature and knowledge transfer.

### Courses

P (15)

Module taught in: German/English

### Method of assessment

(Log (approx. 20 to 30 pages) or research proposal for thesis based on project (approx. 10 to 20 pages)

Language of assessment: English

### Allocation of places

**Contents**

Students conduct a scientific research project using appropriate methods and adhering to the principles of good scientific practice. They document and discuss their work in a thesis.

**Intended learning outcomes**

Students are able to independently carry out scientific work according to the rules of good scientific practice. They are able to document and, where necessary, adjust their research as well as to interpret their findings in a larger context.

**Courses** (type, number of weekly contact hours, language — if other than German)

No courses assigned to module

Module taught in: German / English

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Master's thesis (approx. 30 to 60 pages)

### Contents
Students present the results of their thesis projects in a scientific colloquium.

### Intended learning outcomes
Students are able to present and defend the data from their thesis project in front of a professional audience.
