| The press, cinema, radio, TV, and even computers and the internet are often suspected to solely entertain users, thereby undermining a critical, objective and reflective examination of the information given. As a consequence, entertainment is often thought to be a threat to the information function of media. Formerly neglected by most researchers, there has been a rising interest in the scientific understanding of entertainment. This course offers an insight into the current state of entertainment research. | | | | | |
| Intende | ed learr | ning outcomes | | | |

| By completing this course, students receive a profound understanding of the functioning of foreign exchange markets, the drivers of exchange rate movements and some exchange rate valuation methods used in practice. Next to a profound knowledge of exchange rate theory the course highlights its practical applicability, e.g. as an investment strategy. Students will be able to analyze these issues based on theoretical models as well as the international historical experience. | | | | | | |

| This course provides an overview of the field of modern labor economics. The course will cover the following to- pics: 1. Labor supply 2. Labor demand 3. Human capital formation 4. Compensating wage differentials 5. Discrimination The course will consist of frontal teaching of the basic theoretical as well as empirical tools as well as a careful reading of some of the key scientific articles related to the outlined topics. Students are expected to read the scientific articles in advance and will be asked to discuss them in small groups during class. In addition, a dis- cussion of the articles will help illustrating how established scholars approach the core questions in modern la- bor economics and giving students an understanding of high quality empirical research. The main reference for the lecture is Cahuc and Zylberberg. (2004): "Labor Economics", 1st edition, Massachu- setts Institute of Technology. Master's with 1 major Media Communication (2016)

This literature is complemented by papers from scholarly journals.

Intended learning outcomes

Students acquire the ability to critically understand the effects and issues associated with the use of trade policy instruments. They are enabled to understand and evaluate the causes and consequences of interventions in international trade on the aggregate economy, producers and consumers, the foreign trading partners and the world trading system both analytically as well as in an intuitive manner. Students also acquire the scientific knowledge to grasp the factors determining the structure and dynamics of the world trading order.

| The lecture starts out with theories of international trade based on comparative advantage (Ricardo and Heck- scher-Ohlin) followed by theories based on monopolistic and oligopolistic competition to explain intra-industry trade. The final part covers firm heterogeneity and multinational firms. [If time permits the Armington model and the standard neoclassical model will be addressed.] | | | | | | | | | |

| In the module, students work on a problem from a special field of the four core professorships of the program. In doing so, they apply the standard methods of the subject. The duration of this module is limited to a defined period of time. The students are supervised by one of the four core professorships. | | | | | | | | |

| of research in order to derive research desiderata and reseach questions. They develop a methodical approach and test hypotheses/answer the research question. The goal is a significant gain in knowledge. In empirical work, students learn to collect data for hypothesis testing and analyze data in a methodologically correct way. They can then use the results to answer the research question. Further, students can formulate scientific papers according to the requirements of the subject. | | | | | | | | |
