Content and Objectives of the Programme

The master program has been developed for students holding a B.A. degree in Economics, Business Administration or equivalent field who want to specialize in China Business and Economics. Next to classes that offer in-depths analyses of China's economy and aspects of doing business in China, students will learn the Chinese language and take classes in Chinese Studies and advanced Economics. They spend one term for intensive language training at the Peking University in Beijing. Methodological classes prepare students to use their general and China specific economic knowledge for academic research as well as for solving business problems. Within the range of topical courses covering various fields relevant for China business and economics, the students have the option to choose according to their preferences. All obligatory and topical optional courses that the student successfully passed are made explicit and are documented in the transcript of records.

Abbreviations used

Course types: \mathbf{E} = field trip, \mathbf{K} = colloquium, \mathbf{O} = conversatorium, \mathbf{P} = placement/lab course, \mathbf{R} = project, \mathbf{S} = seminar, \mathbf{T} = tutorial, $\ddot{\mathbf{U}}$ = exercise, \mathbf{V} = lecture

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B**/**NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programmes), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: **A** = thesis, **LV** = course(s), **PL** = assessment(s), **TN** = participants, **VL** = prerequisite(s)

Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

In accordance with

the general regulations governing the degree subject described in this module catalogue:

ASP02009

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

12-Mar-2014 (2014-14)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

German contents available but not translated yet.

Chinas Wiederaufstieg in der Weltwirtschaft und Weltpolitik ist eines der prägenden Phänomene des ausgehenden 20. und frühen 21. Jahrhunderts. Er begann mit der Einführung der Reform- und Öffnungspolitik Ende der 1970er Jahre und ging mit tief greifenden Veränderungen in Staat, Wirtschaft und Gesellschaft Chinas einher. Diese spannungsreichen Veränderungen stehen im Mittelpunkt des Moduls. Dabei werden anhand vertiefender Analysen einzelner Aspekte des chinesischen Transformationsprozesses die komplexen Interaktionen verschiedener Faktoren und Felder herausgearbeitet, um die Studierenden in die aktuelle Forschung einzuführen. Im Einzelnen werden gesellschaftliche, politische und wirtschaftliche sowie kulturelle Perspektiven aufgegriffen. Im Sinne einer Intensivierung und Aktualisierung können durch ausländische Gastprofessoren/-innen aktuelle Ergänzungen erfolgen.

Intended learning outcomes

German intended learning outcomes available but not translated yet.

Die Studierenden erwerben detailliertes Wissen über Chinas Veränderungen in den letzten Jahrzehnten. Theoretische Debatten zu Chinas Transformation werden dabei nachvollzogen und durchleuchtet. Die Studierenden erwerben durch wissenschaftliche Auswertung zeitgenössischer Primär- und Sekundärquellen die Fähigkeit zur kritischen und kompetenten Bewertung von Zusammenhängen des Themenbereichs. Der Umgang mit Quellenmaterial und die Abfassung wissenschaftlicher Arbeiten wird systematisch erarbeitet und erlernt. Dabei steht auch immer die methodische Frage nach Zugängen, Datenmaterial und Aussagefähigkeit verschiedener theoretischer Ansätze im Zentrum, um den Studierenden Stärken und Schwächen, aber auch die Möglichkeit interdisziplinärer Verbindungen zu verdeutlichen.

Courses (type, number of weekly contact hours, language - if other than German)

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 04-TCC1-1-122: S (no information on SWS (weekly contact hours) and course language available)
- 04-TCC1-2-122: S (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus)

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component o4-TCC1-1-122: Contemporary Politics in Transformation

- 3 ECTS, Method of grading: numerical grade
- written examination (approx. 60 minutes) or oral examination of one candidate each (approx. 15 minutes)
- Language of assessment: English

Assessment in module component o4-TCC1-2-122: Contemporary Society in Transformation

- 3 ECTS, Method of grading: numerical grade
- written examination (approx. 60 minutes) or oral examination of one candidate each (approx. 15 minutes)

Theore- tische Debatten zu Chinas Transformation werden dabei nachvollzogen und durchleuchtet. Die Studierenden er- werben durch wissenschaftliche Auswertung zeitgenössischer Primär- und Sekundärquellen die Fähigkeit zur kri- tischen und kompetenten Bewertung von Zusammenhängen des Themenbereichs. Der Umgang mit Quellenma- terial und die Abfassung wissenschaftlicher Arbeiten wird systematisch erarbeitet und erlernt. Dabei steht auch immer die methodische Frage nach Zugängen, Datenmaterial und Aussagefähigkeit verschiedener theoretischer Ansätze im Zentrum, um den Studierenden Stärken und Schwächen, aber auch die Möglichkeit interdisziplinärer Verbindungen zu verdeutlichen.

Time	Description: The module will introduce students to qualitative / quantitative research paradigms, using, among others, the example of empirical studies in the area of founding and management research. During the course, participants will be required to present significant substantive and methodological findings of a recent empirical essay. In their presentations, students will address the following key questions: What contribution does the paper ma- ke? How are empirically testable hypotheses derived? What method of empirical data collection is used? What evaluation methodology is used? What are the implications for science and practice, what are the strengths and weaknesses of the paper? Content (subject to change): 1. Introduction 2. Philosophy of science 3. Study design 4. Correlations 5. Methods of data collection 6. Simple linear regression 7. Specification problems and distributions 8. Time series analysis 9. Logistic regression

Conter	Contents										
Description: This module introduces students to sustainability management. First, essential concepts such as sustainability and corporate social responsibility are explained, the role of busi- nesses within society is discussed. Afterwards, the module addresses different aspects of corporate sustainabi- lity as well as environmental and social management with particular regard to the dimensions of corporate and economic performance and competitiveness. Content: 1. Basic overview of sustainability and (legal) frameworks 2. Business and society 3. System theory											
 4. Sustainable as well as eco-innovation 5. Operational sustainability management (sustainable strategies, environmental performance indicators) 6. The impact of environmental and social management on corporate performance and competitiveness 											
		ning outcomes		corporate performan		1855					
After successfully completing the module "Sustainability Management", students will be able to (i) explain and define the basic principles and concepts of Sustainability Management as well as to deal with the contributions and aspects of sustainable development in a critical way; (ii) assess and analyse the complex problems and implementation strategies of Sustainability Management ba- sed on the gained knowledge and experiences of this course; (iii) evaluate different strategic and operational approaches of Sustainability Management as well as to transfer these approaches onto various case studies.

In this course, students will acquire an overview of the strategic aspects of innovation management. They will ac- quire the knowledge necessary to understand the range, scope and complexity of the issues and problems rela- ted to the strategic management of innovations. The lecture will focus on innovation teams and the different ro- les in the innovation process. It will also discuss how users can be involved in the innovation process. In additi- on, the course will address the concepts of open innovation, lean innovation and crowdsourcing and will discuss how platform strategies can be used for the new product development process as well as what market entry stra- tegies and patent management strategies are currently used. Practical examples and case studies will be used to provide students with a better understanding of the theoretical concepts. Intended learning outcomes At the end of the module students are able to understand: • The tasks of the strategic innovation management • The state of the art and importance of innovations • The current trends in strategic innovation management • The importance of patent strategies • The market entry strategies • The market entry strategies

Content	ts				
The primary object of this course is to gain a detailed understanding of strategic networks and of the phenome- non of clustering in the industrial industry. The example of the international automotive industry is used for clari- fication of the theoretical contents. The focus is on marketing in industrial companies and also on CSR - CSR is considered the "driver" of sustaina- ble innovations - as well as the different strategy types of sustainable innovations. Outline of syllabus: 1. Strategic networks and clusters in industrial industries such as the automotive industry 2. Transaction types of Williamson as well as strategic cooperation between automobile manufacturers and sup- pliers 3. Management of business types, in particular the business of suppliers in the automotive industry 4. Cluster and entrepreneurship activities 5. Sustainable innovation strategies Intended learning outcomes By the end of the course, students gain a profound understanding above the basics of network research. Further- more students will aquire sectoral knowledge of the automotive industry as well as detailed cluster skills.

Description: At the beginning of the 21st century, marketing - until then interpreted as a market-oriented corporate manage- ment approach - was further developed to be seen as the entrepreneurial task of creating "shared value" for the organisation on the one hand and - broadly speaking - for society on the other hand. This idea leads to high re- quirements regarding the strategic sustainable positioning of the brand as well as brand management itself. Outline of syllabus: 1. Brand leadership and brand assessment 2. Brand leadership, identity and relevance according to David Aaker's approach 3. Brand strategies 4. Consumer behaviour 5. Market research methods and the development of brand strategies 6. Market research methods Intended learning outcomes Based on the theories of Meffert and Aaker, students will gain a profound understanding for brand leadership, which will be deepened by many pracital implications and examples. Provided by cases studies and market re-

Description: The module builds on the knowledge acquired during the Bachelor's degree programme or the <i>Grundstudium</i> (stage I studies). It provides a systematic introduction to strategic marketing decisions in global and internatio- nal contexts. These are explained mainly by Porter's diamond and cluster models. Another focus is on internatio- nalisation strategies, which require country analyses and decisions on the selection of national markets as well as a timing of the countries market development. In addition, the module discusses different strategies for mar- ket entry and market development. Outline of syllabus: 1. Internationalisation of the economy and regional integration processes - Globalisation - Competitiveness of countries, industries and companies in an international context 2. International strategic marketing decisions - Market entry forms - Market entry forms - Market development strategies - Timing strategies - International organisation structures 3. Theories and strategies of internationalisation - Foreign trade theory - Multinational enterprise - International istategies						l internatio- on internatio- kets as well

Intended learning outcomes

The students have a deeper understanding of the sustainable corporate management and have the basics of the competitive process and competitive dynamics available. In addition, they can use the acquired knowledge, while taking into account the conventional problems of the strategic and sustainable management, to solve business case studys on their own.

Allocation of	places			
Number of places: 20. Should the number of applications exceed the number of available places, places will be allocated in a standardised procedure among all applicants irrespective of their subjects according to the following quotas: Quota 1 (50% of places): total number of ECTS credits already achieved in the respective degree subject; among applicants with the same number of ECTS credits achieved, places will be allocated by lot. Quota 2 (25% of places): number of subject semesters of the respective applicant; among applicants with the same number of subject semesters, places will be allocated by lot. Quota 3 (25% of places): allocation by lot. In this procedure, applicants who already have successfully completed at least one module component of the respective module will be given preferential consideration. Places on all courses of the module component with a restricted number of places will be allocated in the same procedure. A waiting list will be maintained and places re-allocated as they become available.

A next generation of enterprise systems called business service platforms is emerging using new disruptive tech- nologies such as cloud computing, big data and mobility. These business service platforms apply the concept of product platforms to software. They will 1. be services based 2. be offered as a service in the cloud 3. address new classes of users and types of business especially in the service business 4. allow for a high degree of business adaptability and extensibility. 5. be supplemented by a broad offer of partner add-ons supporting accelerated innovation. These new business service platforms will play a key role in the digital transformation of the software industry. Intended learning outcomes Be aware of the big business productivity progress enabled by BIS in the last 50 years. Understand the limitati- ons of these systems in spite of the digital transformation of the software industry as- sess the business potential of new IC technologies. Understand the business demand for change. Understand

Conten	ts					
forces companies to adapt their standard business software solutions. With the help of dynamic adaptation (Continuous System Engineering), this process of change can be supported effectively and efficiently. This mo- dule discusses both the systematic implementation of adaptation steps (so-called customising) using the exam- ple of the mySAP Business Suite and the concept of Continuous System Engineering using various practical ex- amples. Business Apps: The course combines theory and practice in the area of cloud computing and ERP. Par- ticipants gain an insight into the architecture of the ByDesign platform and are presented with an opportunity to gain practical experience working with the corresponding software development kit. Content: - Fundamentals of cloud computing - Cloud business solutions - Architecture of the SAP Business ByDesign platform - Platform adaption and extensibility						
- Hands	s-on SD	tware development in SA K: independently design				
Intende	ed learn	ning outcomes				
Business Suite: Students learn about the various ways of adapting a standard business software solution to the special requirements of a company. They also develop a fundamental understanding of the dynamic adaptation of business software libraries. Based on selected examples from the SAP Business Suite that the acquired know-ledge will be deepened by using case studies. Business Apps: The course imparts knowledge and delivers skills in cloud computing for businesses, ERP systems architecture and software development at the example of the SAP Business ByDesign platform. The independent planning, implementation and documentation of a business app trains important core competencies of technology-oriented Business Informatics.

Contents					

The course provides an overview of the structure and applications of analytical information systems. A special focus is on individual quantitative methods of data analysis. A basic knowledge of statistics and data modelling is a prerequisite for participation in this module.

Intended learning outcomes

The module provides students with knowledge of:

(i) Data Warehousing & OLAP

(ii) Operational application areas and methods of data analysis

 $\label{eq:courses} \textbf{Courses} \ (type, number of weekly contact hours, language-if other than German)$

V + Ü (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus)

a) written examination (approx. 60 minutes) or b) term paper (approx. 15 pages)

Allocation of places

Number of places: 20. Should the number of applications exceed the number of available places, 15 places will be set aside for Master's students of Business Information Systems. (1) Should the number of applications exceed the number of available places, places will be allocated in a standardised procedure among all applicants irrespective of their subjects according to the following quotas: Quota 1 (50% of places): total number of ECTS credits already achieved in the respective degree subject; among applicants with the same number of ECTS credits achieved, places will be allocated by lot. Quota 2 (25% of places): number of subject semesters of the respective applicant; among applicants with the same number of subject semesters, places will be allocated by lot. Quota 3 (25% of places): allocation by lot. In this procedure, applicants who already have successfully completed at least one module component of the respective module will be given preferential consideration. (2) Places on all courses of the module component with a restricted number of places will be allocated in the same procedure. (3) A waiting list will be maintained and places re-allocated as they become available.

This module will be discontinued, no courses are offered currently or will be offered in future. This may be due to one of the following reasons:					
 the module belongs to a version of the examination regulations that no longer has any enrolled students the lecturer who offered the course is no longer employed at the University of Würzburg the contents are no longer taught and were substituted with comparable offers 					

For more information, please contact the Office of the Dean of Studies of the Faculty of Business Management and Economics.

Intended learning outcomes

Due to the lack of relevance, no learning outcomes description is available because no courses are held for this module.

Courses (type, number of weekly contact hours, language – if other than German)

V (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus)

a) written examination (approx. 120 minutes) or

b) oral examination (approx. 15 minutes)

Language of assessment: English

Assessment offered: once a year, summer semester

Allocation of places

Business Management Master's and Economics Master's: no restrictions. Applied Human Geography Master's: 10 places. Places will be allocated by lot.

concep a gener the intr ployme ce will social j cus wil	The lecture "Theorie der Sozialpolitik" ("Theory of Social Policy") discusses the concept of social security and the concept of social justice. In the first part of the course, which will deal with social security, students will acquire a general overview of possible market failures in an insurance market. One chapter will then each be devoted to the introduction and characterisation of the three main branches of social insurance (pension, health and unemployment insurance). Subsequently, different options for a reform of the individual branches of social insurance will be introduced and evaluated in terms of efficiency. In the second part of the course, which will deal with social justice, different definitions of the concept of justice will be discussed in more detail. Here, the main focus will be on identifying and critically examining different criteria for the measurement of inequality in a society. In addition, efficiency-oriented justifications for redistributive policies by the government will be addressed and

This co ty etc.). field ar tribute kets ard Outline 1. Progr 2. Solu 3. The c 3. Polic	Description: This course will mostly be concerned with the analysis of public policy (in areas such as taxation, social securi- ty etc.). Providing students with state-of-the-art techniques for quantitative macroeconomic research in this very field and familiarising them with the relevant literature, this course will teach students how such policies redis- tribute between different generations and also within generations, how they may improve risk sharing when mar- kets are incomplete and how they can trigger distortions and therefore hurt the aggregate economy. Outline of syllabus: 1. Programming with FORTRAN and application of numerical methods 2. Solution techniques for dynamic programming problems 3. The overlapping generations model (OLG) with uninsurable income risk 3. Policy analysis in the stochastic OLG model Reading:

and a re mans n growth, Outline I Facts a II Infinit	The course covers long-run aspects of macroeconomics. We start with a review of the facts of long-run growth and a review of the Solow growth model. The lecture then focuses on the infinite-horizon Ramsey-Cass-Koop- mans model and on endogenous growth theory. Applications of this framework involving urban and regional growth, resources and the environment will be discussed, time permitting. Outline of syllabus I Facts and the Solow growth model II Infinite-horizon Ramsey-Cass-Koopmans model III Endogenous growth

Content	ts					
The course offers an introduction to "Dynamic Stochastic General Equilibrium Modelling" (DSGE). These models are designed to describe the business cycle at the macro level. In a first step, we analyse the behaviour of a representative household. In particular, we describe how consumption, asset allocation and labour supply plans are formulated. In a second step, we focus on the firm sector and address how firms solve for optimal production plans. In a third step, we explain what role the central bank plays in stabilising the business cycle. Thereby, we show how changes in interest rates interact with optimal decisions taken by households and firms. We also discuss hot topics such as CAPM models and monetary policy in the euro area.						
Intende	d learr	ning outcomes				
Intended learning outcomes The course offers analytical tools designed to solve DSGE models. These analytical skills encompas: Solving of intertemporal optimization problems (e.g., consumption Euler-equations). Linearization methods (e.g., Taylor-expansions). Solving linear difference expectations by minimum state variabel techniques (MSV-solution). Basic time series concepts such as impilse response functions, variance decompositions. Basic insights in MATLAB/ Dynare programming: specifying, solving and estimating DSGE models. Courses (type, number of weekly contact hours, language – if other than German) V + Ü (no information on SWS (weekly contact hours) and course language available) Method of assessment (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus) a) written examination (approx. 60 minutes) or b) term paper (approx. 15 pages) Allocation of places

Descrip	Description:				

The course provides students with an overview of the macroeconomic conditions and consequences of European integration and monetary union. The course thus helps students gain a deeper understanding of the current crisis in the euro area as well as the debate on the future of European economic integration.

Content:

The first part of the course provides students with an overview of the history of European integration with a focus on economic and monetary integration. We then discuss the institutional framework of the European Monetary System, the predecessor of the euro area in the period from 1979 to 1998. Next, the criteria for admission to the European Monetary Union (EMU) and the monetary policy strategy of the European Central Bank will be presented and discussed. Building on the traditional Mundell-Fleming model, the course will make students familiar with the theory of the optimum monetary area and will then provide them with deeper insights into this theory on the basis of a simple New Keynesian model. Students will thus be able to make a well-founded assessment of the advantages and disadvantages of monetary union as well as the conditions under which monetary union can be successful. In the final part of the course, we analyse the coordination and incentive problems that arise for fiscal policy in a monetary union. In particular, we deal with the question of how these issues are addressed within the European Monetary Union. Current macroeconomic developments within the euro area as well as the causes and consequences of the euro crisis are discussed at various points in the course.

Intended learning outcomes

After completing this course students will have gained a profound understanding of the costs and benefits of monetary integration in general and specifically in the EMU. Thus, they will enhance their general macroeconomic understanding by applying it to real world problems. In addition, students will have knowledge of the institutions of common fiscal and monetary policy in Europe.

Courses (type, number of weekly contact hours, language — if other than German)

V + Ü (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

a) written examination (approx. 60 minutes) or b) term paper (approx. 15 pages)

Allocation of places

Number of places: 30, thereof 10 places for Master's students of Business Management and Master's students of Economics assigned as described below and 10 places each for Master's students of Applied Human Geography and Master's students of Political and Social Sciences, assigned by lot. (1) Should the number of applications exceed the number of available places, places will be allocated in a standardised procedure among all applicants irrespective of their subjects according to the following quotas: Quota 1 (50% of places): total number of ECTS credits already achieved in the respective degree subject; among applicants with the same number of ECTS credits achieved, places will be allocated by lot. Quota 2 (25% of places): number of subject semesters of the respective applicant; among applicants with the same number of subject semesters, places will be allocated by lot. Quota 3 (25% of places): allocation by lot. In this procedure, applicants who already have successfully completed at least one module component of the respective module will be given preferential consideration. (2) Pla-

The course deals with the following topics: 1. Intertemporal allocation How do households and firms take an optimal decision regarding investments and savings? Why are financial markets efficient? What is the meaning of financial accounting? 2. Banking, financial markets and crisis What are the main functions of banks? What are the roles of banks in an economy? What are the reasons and solutions for liquidity and solvency problems of banks? 3. Macroeconomic analysis of banks Banks as intermediaries vs. originators of saving deposits. Macro models of banking The role of banks during the financial crisis. 4. Money demand What are the key determinants of money demand? 5. The monetary transmission channel Connection between monetary policy and the real economy in the BMW model. Description of the basic model. Extension of the basic model of fiscal policy. 6. Deflation Consequences of deflation on macro variables on the basis of different models. Intended learning outcomes By completing this course, students receive a profound understanding of theory and practice of the monetary po- licy and the financial system. Next to a profound knowledge of banking in general, students learn the monetary transmission channel. Students will be able to analyze these issues based on theoretical models as well as the

Next to a profound knowledge of exchange rate theory the course highlights its practical applicability, e.g. as an investment strategy. In the second part of the course students learn the principles of monetary policy in open economies, including its trade-offs and risks like currency crises. Students will be able to analyze these issues based on theoretical models as well as the international historical experience. Courses (type, number of weekly contact hours, language – if other than German) V + Ü (no information on SWS (weekly contact hours) and course language available) Method of assessment (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus)							
V + Ü (no information on SWS (weekly contact hours) and course language available) Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)	By completing this course, students receive a profound understanding of the functioning of foreign exchange markets, the drivers of exchange rate movements and some exchange rate valuation methods used in practice. Next to a profound knowledge of exchange rate theory the course highlights its practical applicability, e.g. as an investment strategy. In the second part of the course students learn the principles of monetary policy in open economies, including its trade-offs and risks like currency crises. Students will be able to analyze these issues

UNIVERSITÄT WÜRZBURG

Allocation of places

Number of places: 30. Should the number of applications exceed the number of available places, places will be allocated in a standardised procedure among all applicants irrespective of their subjects according to the following quotas: Quota 1 (50% of places): total number of ECTS credits already achieved in the respective degree subject; among applicants with the same number of ECTS credits achieved, places will be allocated by lot. Quota 2 (25% of places): number of subject semesters of the respective applicant; among applicants with the same number of subject semesters, places will be allocated by lot. Quota 3 (25% of places): allocation by lot. In this procedure, applicants who already have successfully completed at least one module component of the respective module will be given preferential consideration. Places on all courses of the module component with a restricted number of places will be allocated in the same procedure. A waiting list will be maintained and places re-allocated as they become available.

5	nume	rical grade				
Duratio	n	Module level	Other prerequisites			
1 seme	ster	graduate				
Conten	ts					
Outline of syllabus: 1. Legal environment, competition laws 2. Market definition - Qualitative methods - Simple quantitative methods - Simple quantitative methods - Hypothetical monopoly test 3. Horizontal agreements and collusion: repeated games and factors affecting likelihood of collusion 4. Horizontal mergers and collusion - Economic theory - Efficiency effects - Coordinated effects 5. Vertical relations and contracts - Economic analysis of contracts - "More economic approach" 6. Abuse of dominant position - Classification of abusive conduct - Economic analysis of abusive conduct and theory of harm						
		l be taught in English.				
Intended learning outcomes After completion of the module students can use the advanced concepts introduced in the lecture of competiti- on policy, including the legal framework, the trace models and methods for the study of competition policy issu- es, as well as understand the approach of European competition policy in high profile cases. When they are con- fronted with practical problems, they can refer to these cases, and the same logic to practical examples apply by draining the relevant economic theories that identify variables to be measured and methodologies for assessing, and based on that adequate conclusions for appropriate cases. They will sufficiently understand the subject in order to open up that build upon literature in journals and being able to think critically.

holder of th	e Chair of Industrial Econ	omics	Faculty of Business	Management and E	conomics		
ECTS Me	thod of grading	Only after succ. con	npl. of module(s)				
5 nur	nerical grade						
Duration	Module level	Other prerequisites					
1 semester	graduate						
Contents	Contents						
Theory of industrial organisation: 1. Monopoly pricing - Nonlinear pricing and mechanism design - Dynamic pricing: experience goods, durable goods 2. Oligopoly pricing - Static price and quantity competition in homogeneous and differentiated goods markets - Comparative statics - Equilibrium market structure 3. Dynamic competition in oligopoly markets - Repeated games and collusion - Markov perfect equilibrium and models of dynamic competition 4. Strategic behaviour by incumbent firms - Entry deterrence and predation - Signalling and reputation 5. Auctions - Second price auctions - First price auctions 6. Advertising and product design							
Intended le	arning outcomes						
Students which complete this class will acquire a working knowledge of advanced theoretical models of compe- tition in oligopoly markets as well as sophisticated pricing techniques in monopoly markets. They will learn the conditions under which the predictions of these models are valid. They will become familiar with applications of advanced game theoretic tools, such as dynamic models of competition and auction theory, for studying interac- tions between firms in markets. By means of comprehensive exercises, they will apply the methods they learn in class to practically relevant problems. They will be in a position to read academic papers on related topics, as- sess the strengths and weaknesses of approach, summarize and comment on these papers and suggest possi- ble extensions.

Conten	ts					
Description: This course discusses vertical contracts in supply chains and their impact on competition. Outline of syllabus:						
Outline of syllabus: 1. The classic problem of double marginalisation and its solution by nonstandard contracts (resale price mainte- nance, nonlinear pricing (rebates), exclusive territories, exclusive dealing etc.) 2. Contracts for service 3. Common agency 4. The delegation principle 5. The commitment problem 6. Interlocking relationships 7. Foreclosure by vertical contracts or mergers						
Intende	ed learr	ning outcomes				
After completing the course students are able to (i) explain the results of theoretical industrial economics on vertical contracts; (ii) apply the involved methods to given simple examples on their own; (iii) recognize, in which real life situations (and how) the results can be applied; (iv) analyze the impact of certain vertical contracts on competition.

Conten	Contents					
Description: This module deals with the basic concept and methodology of the ordinary least squares (OLS) regression mo- del. In particular, model assumptions and properties are discussed and formally motivated. In addition, the mo- dule examines linear restrictions on the models explanatory variables as well as dummy variables and introdu- ces tests to verify simple and multiple linear restrictions. Linear algebra is used as formal aid. Outline of syllabus: 1. Random variables 2. Important distributions 3. Point estimates 4. Simple linear regression model 5. Model assumptions 6. Model properties 7. Simple hypothesis tests 8. Multiple linear regression model 9. Linear restrictions						
10. Dur 11. Mul		pothesis tests				
Intend	ed learı	ning outcomes				
The students acquire knowledge of the basics, concepts and methods used in the classical linear regression mo- del and understand the role of econometrics in science and data analysis. In particular, they learn how to analy- tically derive, calculate and interpret the coefficients, standard errors and p-values of a classic regression output of the multiple regression model. Furthermore, they are able to state and motivate formally the assumptions and properties of OLS and know how to deal with transformed and dummy variables. Additionally, students are able to test multiple linear restrictions on the parameters and are able to apply these tests to real economic, business and social science questions. The competences acquired in this course serve as a prerequisite for "Econometrics II", "Econometrics III", "Micro- econometrics" und "Financial Econometrics".

Conten	Its		•				
Description: This module deals with the basics, concepts and methods of the generalised least squares (GLS) framework. Partly as a motivation for the GLS model and partly for its own right, different specification and data problems as well as violations of model assumptions of the OLS estimator (as introduced in "Ökonometrie I" ("Econometrics I")) are discussed. This includes multicollinearity, a test for structural breaks, heteroskedastiticy and autocorrela- tion. Linear algebra is used as formal aid. Outline of syllabus: 1. Specification analysis 2. Multicollinearity 3. Heteroskedastiticy 4. Autocorrelated disruptive terms 5. Generalised least squares (GLS) Intended learning outcomes Students acquire essential knowledge of the fundamentals, methods and concepts for estimating the generali- zed linear regression model (GLS) and can apply and interpret it. They are sensitized for specification problems, data problems and violations of the assumptions of the classical linear model (OLS) so that they are able to re- cognize, to assess and therefore adequately deal with these problems in theory and practice. This enables them to critically assess the use of the Estimation methods in scientific work and to work independently on adequate implementation of empirical analyzes to answer selected (economic) scientific issues if available data with the above-mentioned Involve problems. The competences acquired in this course serve as a prerequisite for "Econo-

Conte	nts						
Description: This module deals with advanced econometric methods and concepts based on the classical and the generali- sed least squares estimator discussed in Ökonometrie I and II (Econometrics I and II). In particular, this includes the instrumental variable (IV) estimator, the generalised method of moments (GMM) estimator, distributed lag models as well as basic methods and concepts used in uni and multivariate econometric times series analysis, including (non)stationarity, integration, cointegration. Linear algebra is used as formal aid. Outline of syllabus: 1. Error-in-variables 2. IV estimation 3. Generalised least squares estimation 4. Distributed lag models 5. Stationary uni and multivariate processes 6. Deterministic and stochastic trends 7. Integrated and cointegrated processes 1. Integrated and cointegrated processes 1. Method Learning outcomes The students acquire thorough understanding of advanced methods and concepts in econometrics. They are fa- miliarized with diverse error-in-variables issues and capable of handling them appropriately. After the course, students understand the generalized methods of moment (GMM) and the instrumental variable (IV) estimator to an extent that they can discuss their pros and cons, apply these to selected questions in quantitative econo- mics, and understand scientific papers using these methods. Furthermore, they become acquainted with selec- ted time series issues, such as distributed lag models, non-stationarity, spurious correlation, and cointegrated processes, enabling them to conduct a comprehensive time series analysis. In brief, the course enables students to apply the above mentioned methods and concepts to real life questions, assess their appropriateness, and

Conten	ts					
Description: This course builds on the Master's courses "Ökonometrie 1" ("Econometrics 1") and "Ökonometrie 2" ("Econometrics 2") and introduces students to different microeconometric models. In the first part of the course, the maximum likelihood estimation procedure is introduced, its importance for estimating microeconometric models and properties of the estimators are explained and derived. Subsequently, a wide variety of micoreconometric models is motivated and explained and the advantages of these models over the linear regression model are pointed out. In addition, these models are estimated with different estimation methods and the results are interpreted. Outline of syllabus: Maximum likelihood estimator and its properties Logit and probit models for unordered categories Logit and probit models for ordered categories Logit and probit models for ordered categories Logit and probit models for count data Duration analysis The advantages The advantages Duration analysis The advantages Duration analysis The advantages Duration analysis The advantages Duration analysis

Contents	·					
Description: The module covers the fundamentals, methods and concepts for the empirical analysis of financial market da- ta. The concept of market efficiency is explained and critically examined with reference to the random walk hy- pothesis. To test this hypothesis, a number of parametric and non-parametric methods are proposed and app- lied in practice. Based on the findings, market microstructure models that can explain some important empiri- cal findings will be discussed. In addition, the course describes event studies for testing the significant impact of corporate news on the share price and discusses issues of univariate time series analysis such as AR(I)MA and ARCH / GARCH models that are indispensable for modelling financial market data. In the final part of the course, the CAPM is discussed and examined, in particular, with regard to its empirical applicability. Outline of syllabus: 1. Information efficiency 2. Random walk 3. Theoretical market models 4. Event studies 5. Univariate modelling of time series data 6. Models to explain volatility (ARCH and GARCH) 7. Estimation of the capital asset pricing model						
Campbell, Geyer, A.: schaftlich Hamilton, Mills, T.: E	Reading: Alexander, C.: A Guide to Financial Data Analysis, Wiley. Campbell, JY, Lo, AW, MacKinley, AC: The Econometrics of Financial Markets, Princeton University Press. Geyer, A.: Information, Erwartung und Risiko. Mills, T.: Econometric Modelling of Financial Time Series, Cambridge University Press. Taylor, S.: Modelling Financial Time Series, Wiley.					
Intended	learning outcomes					
Students have significant knowledge of the fundamentals, methods and concepts that are needed for the empirical analysis of financial market data. They can autonomously perform statistical test decisions with statistics programs such as EViews or Gretl and critically analyze in terms of their economic importance. In addition, the students learn the independent handling of empirical capital market data and have at the end of the course the ability to develop also own functions and routines, for example for EViews.
