Content and Objectives of the Programme

The Master's degree in Management International is offered by the JMU's Faculty of Economics and Business as a research-oriented degree leading to the degree "Master of Science" (M.Sc.) as part of a consecutive Bachelor's and Master's model.

The aim of the course is to provide students with in-depth knowledge in the field of management science and scientific work in research and application and to enable them to carry out independent research in this area after successfully completing their studies. Through education and training in analytical thinking and in particular on the basis of the basic scientific knowledge already acquired from the bachelor's degree as well as the in-depth and expanded business knowledge acquired in the master's degree, the students acquire the ability to familiarize themselves with a wide range of tasks and to apply the knowledge they have acquired independently and to new ones transfer tasks.

The language of instruction in the Master's program in Management International is generally English. Completing modules taught in English qualifies graduates for excellent international research-related positions in a wide variety of industries such as banks, insurance companies, public services, management consultancies, industrial companies or even business and tax consulting companies.

Abbreviations used

Course types: \mathbf{E} = field trip, \mathbf{K} = colloquium, \mathbf{O} = conversatorium, \mathbf{P} = placement/lab course, \mathbf{R} = project, \mathbf{S} = seminar, \mathbf{T} = tutorial, $\ddot{\mathbf{U}}$ = exercise, \mathbf{V} = lecture

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B/NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programmes), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: **A** = thesis, **LV** = course(s), **PL** = assessment(s), **TN** = participants, **VL** = prerequisite(s)

Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

In accordance with

the general regulations governing the degree subject described in this module catalogue:

ASPO2015

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

12-Dec-2024 (2024-104)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

| This course provides students with a comprehensive understanding of the principles and processes of conduc- ting effective marketing research. This includes, for example, understanding latent constructs, designing data collection methods and questionnaires, and setting up experiments. In addition, students will learn techniques for data analysis and interpretation using SPSS, covering univariate, bivariate and multivariate analysis methods to derive actionable insights from the research results. Rough course structure: Basics and process of marketing research Introduction to marketing research Latent constructs Data collection & questionnaire design Experimental set-up Data analysis and interpretation Introduction to SPSS Univariate and bivariate analysis methods Multivariate analysis methods (various forms of regression analysis; analysis of variance; conjoint ana- | | | | | | | |

| Behavioral economics refers to the field of research which, inspired by numerous documented deviations from the rational behavior assumed in neoclassical analysis, tries to improve the psychological realism of the idea of man in economics by incorporating insights from psychology into traditional economic analysis. In this course, students will become familiar with several of the most influential behavioral-economic theories of individual and strategic decision-making, which allow to explain a plethora of empirically documented deviations from the neoclassical model. These include departures from the assumptions of selfishness, time consistency, as well as rationality and rational expectations. The discussed behavioral-economic theories usually contain the neoclassical standard model as a special case and, therefore, are to be considered as extensions of rather than alternatives to the neoclassical model. While this lecture focuses on theories of individual decision-making, we will explore the implications of these theories also in the context of market settings and economic games. All necessary ideas and concepts will be introduced and discussed throughout the course. Nevertheless, as behavioral economics represents an extension of the neoclassical model, a solid understanding of the latter will be helpful. Consequently, students who completed advanced classes in microeconomics or game theory will most likely benefit most from this course. While the exposition is primarily based on research articles, some topics of the lecture can be reviewed in the following textbooks: Dahmi (2016): "The Foundations of Behavioral Economics" Wilkinson and Klaes (2012): "An Introduction to Behavioral Economics" Wakker (2010): "Prospect Theory for Risk and Ambiguity" | | | | | | |

| The course Organizational Economics and Digital Transformation introduces advanced topics in organizational economics, with a focus on economic decision-making within organizations. Concepts and tools from microeco- nomic theory, as well as empirical findings from field studies and laboratory experiments, are incorporated, such as those related to performance measurement and incentives, organizational structure, and authority. Additio- nally, the course integrates key aspects of digital transformation shaping modern business landscapes. Thus, students not only gain a solid overview of the fundamental principles of organizational economics but also in- sights into the challenges, opportunities, and strategies associated with the digital transformation of busines- ses. | | | | | | |

| repeats third or | This module is a thorough introduction to monetary policy. The course is divided into four sections. The first one repeats macroeconomic concepts. The second one deals with core topics on monetary policy and theory. In the third one, monetary policy with the zero lower bound on nominal interest rates constraint is analyzed. The fourth section deals with linkages between monetary and fiscal policy. | | | | | |

| holder of the Junior Professorship of Microeconomics, esp. Faculty of Management and Economics ECTS Method of grading Only after succ. compl. of module(s) 5 numerical grade - Duration Module level Other prerequisites 1 semester graduate - Contents Data science is concerned with extracting knowledge and valuable insights from data assets. This course provides an introduction to data science and its application in business and economics. Participants will be familiarized with data handling in Python, data visualization, and various machine learning techniques for prediction and estimation. We will apply the acquired knowledge in topics from business and economics. The course will be divided into two parts: the lecture where the techniques will be taught as well as exercise in which students will be able to work with data on their own. Intended learning outcomes In this module. • students gain an understanding of how to apply the taught techniques to real data sets. Courses (type, number of weekly contact hours, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus a) written examination (approx. 6o minutes) or b) term paper (approx. 15 pages) Language of assessment (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus < | Applied | Applied Data Analysis and Machine Learning | | | | 12-M-TDS-242-m01 | |

| gns in t the epis shown which l science The sec tal varia to answ ment of The ass lecture. stion. F | This course offers an introduction to the fundamentals of causal inference and to widely used research desi- gns in the social sciences. In the first part a framework for understanding causality is introduced. Specifically, the epistemological differences between association, intervention and counterfactuals are explained. Then it is shown why experiments are paramount in generating causal knowledge and which assumptions are needed for which level of the causal hierarchy. Finally, we will discuss two widely used approaches to causality in the social sciences, i.e. potential outcomes and directed acyclic graphs. The second part is devoted to the research designs regressions analysis, difference-in-differences, instrumen- tal variables, and regression discontinuity. The emphasis is how these research designs are for example applied to answer important questions in labour economics such as the effects of a minimum wage increase on employ- ment or the effect of children on female labour supply and wages. The assumptions each research design requires in order to identify a causal effect will be at center stage of the lecture. Therefore the emphasis is to teach students <i>what</i> one needs to estimate in order to answer a given que- stion. Further, the research designs are discussed such that students will be able to evaluate and apply these re- | | | | |

| Description: This module deals with the basic concept and methodology of the ordinary least squares (OLS) regression mo- del. In particular, model assumptions and properties are discussed and formally motivated. In addition, the mo- dule examines linear restrictions on the model's explanatory variables as well as dummy variables and introdu- ces tests to verify simple and multiple linear restrictions. Linear algebra is used as formal aid. Outline of syllabus: 1. Random variables 2. Important distributions 3. Point estimates 4. Simple linear regression model 5. Model assumptions 6. Model properties 7. Simple hypothesis tests 8. Multiple linear regression model 9. Linear restrictions | | | | | |
| 10. Dur 11. Mul | - | riables /pothesis tests | | | |
| Intende | ed leari | ning outcomes | | | |
| The students acquire knowledge of the basics, concepts and methods used in the classical linear regression mo- del and understand the role of econometrics in science and data analysis. In particular, they learn how to analy- tically derive, calculate and interpret the coefficients, standard errors and p-values of a classic regression output of the multiple regression model. Furthermore, they are able to formally state and motivate the assumptions and properties of OLS and know how to deal with transformed and dummy variables. Additionally, students will be able to test multiple linear restrictions on the parameters and will be able to apply these tests to real economic, business and social science questions. The competences acquired in this course serve as a prerequisite for "Econometrics II", "Econometrics III", "Micro- econometrics" und "Financial Econometrics". | | | | | |

| discuss discrep forms of be syst se deal the pos Intende After pa as well | The lecture names introductory relevant communication models. Furthermore, the theoretical models of PR are discussed. The added value of communication for companies, business, politics, and science is explained. The discrepancy between journalism and PR is discussed, as well as the basic elements, instruments, goals, and forms of PR. The preparation and implementation of press meetings, conferences, campaigns, and events will be systematically explained, and the central aspects of corporate communications will be outlined. The exercise deals with the practical implementation of journalistic styles in the various media and provides an overview of the possibilities and concepts of PR work across different media and target groups. Intended learning outcomes After participating in the module courses, students are able to understand and apply PR and its forms, elements as well as methods and in a holistic context. Students learn professional competencies in the field of (business) communication with regard to reflection, argumentation, and exchange as a PR consultant in different areas. In | | | | | |

| Research and research skills are foundational to driving business success in a world where information is abun- dant and constantly evolving. They provide businesses and professionals with the tools needed to navigate com- plexity, innovate effectively, and compete on a global scale. In today's data-driven landscape, businesses rely on thorough research to make informed decisions. Research skills enable professionals to gather, analyze, and interpret data effectively, ensuring that decisions are based on solid evidence rather than intuition. Moreover, the modern business environment is characterized by rapid change. Continuous learning, facilitated by strong research skills, helps individuals and organizations remain adaptable. These skills enable professionals to keep up with industry developments, technological advancements, and shifts in consumer behavior, ensuring that they are always equipped to respond to new challenges and opportunities. This module is designed to equip stu- dents with the skills necessary to conduct rigorous empirical research. Aim and outline of the course:

The Nobel Prizes for Daniel Kahneman and Vernon Smith 2002 and for Richard Thaler 2017 have underlined the increasing importance of experimental methods in economics. Experimental methods are used to collect data using randomization or a highly controlled environment. This course offers an introduction to the methodology of experimental economics and economic laboratory experiments.

In the methodology part it is shown why experiments are a good tool to generate scientific knowledge. Furthermore, widely used techniques in economic experiments are explained and how economic experiments differ from experiments in other social sciences. This part also deals with methods of reasoning, i.e. how inferences can be drawn from evidence that is generated by experiments.

The unifying theme of all laboratory experiments that will be covered is, understanding the behavior of agents, who produce and/or distribute goods by interacting with each other. The first topic is about markets and it includes experiments that shown under which conditions and institutions markets work very efficient and under which conditions and institutions they fail to yield a desirable outcome. The second topic includes experiments that look at the behavior of two agents, who bargain about the distribution of a common pie. On the basis of these results we will discuss experiments that try to explain bargaining behavior and show how agents deviate systematically from the neoclassical framework, i.e. the "homo oeconomicus". The third topic deals with cooperation and institutions that support cooperation in the long run as equilibrium. Further, systematic evidence will be presented on how individuals can be classified in different cooperative types and how these types can explain economic outcomes in natural environments. The forth topic concerns reciprocity, a strong determining factor of human behavior that is nearly universal. We will cover experiments that show how reciprocity can enforce relational contracts in the absence of third party enforcement. Moreover, there will be a special emphasis on how reciprocity affects labor markets.

When time permits up to two additional topics will be covered. The first topic is about gender differences in competitiveness, risk-aversion and overconfidence. The second topic is about the elicitation of social norms.

Prerequisites: Participants should have a basic knowledge about microeconomics, game theory and econometrics.

Literature:

The course will be mainly paper based but the following books provide a good overview and complement the discussed papers.

- Dhami, S. (2016). The Foundations of Behavioral Economic Analysis. Oxford University Press.
- Guala, F. (2005). The Methodology of Experimental Economics. Cambridge University Press

In addition lecture slides will be provided.

Intended learning outcomes

The aim of the course is to familiarize students with the methodology experimental economics. Further, students will be enabled to understand how causal evidence can be obtained using controlled variation and how to generalize from results that are derived in artificial laboratory setting to more natural environments. Moreover, the

| (2025) | cord Master (120 ECTS) Management International - 2025 | |

course shall deepen students' understanding of human decision making in multi-agent settings and to make them aware of systematic heterogeneous human behavior in the production and distribution of goods.

 $\mathbf{Courses}$ (type, number of weekly contact hours, language - if other than German)

V (2) + Ü (2)

Module taught in: English

Method of assessment (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus)

portfolio (approx. 50 hours)

Language of assessment: English

Assessment offered: In the semester in which the course is offered

creditable for bonus

Allocation of places

30 places.

WA1:

(1) Should the number of applications exceed the number of available places, places will be allocated by lot among all applicants irrespective of their subjects. (2) Places on all courses of the module with a restricted number of places will be allocated in the same procedure. (3) A waiting list will be maintained and places re-allocated by lot as they become available.

| As businesses expand, the complexity of managing and reporting financial information across multiple subsidia- ries and countries increases dramatically. Group accounting is crucial for companies operating on a large sca- le, as it involves consolidating diverse financial data into a single, cohesive set of financial statements that re- flect the financial status of the entire corporation. This module covers the necessary knowledge to prepare and interpret consolidated financial statements under the International Financial Reporting Standards (IFRS). We will discuss the basic principles of group accounting and provide in-depth knowledge of the relevant standards. Stu- dents get to know the different types of mergers, acquisitions, and investments and the accounting methods needed to inform stakeholders about these activities. Students learn why consolidated financial statements are relevant and how the consolidation process works. In addition, we cover various recent topics in group accoun- ting, e.g., the treatment of goodwill and why regulating it is becoming increasingly difficult. Outline • Economic principles of group accounting • Scope of consolidation • Preliminary measures • Capital consolidation • Debt consolidation • Consolidation • Consolidation • Consolidation • Consolidation of revenues and expenses • At-equity consolidation | | | | | | | |

| Transparent reporting of large corporations and multinational enterprises are challenging for modern accounting systems. This module addresses recent developments in financial and non-financial accounting, ensuring that students are up-to-date with the current accounting landscape. It is designed for students who have a basic understanding of financial or non-financial accounting and seek to explore complex accounting issues in greater depth. Topics can vary depending on the current issues in practice or research. Former topics include accounting for financial instruments, revenue recognition, or the latest developments in sustainability reporting. The module is taught through a combination of lectures, exercises, and practical case studies. Guest lectures from industry experts are incorporated to provide real-world insights into advanced accounting practices. Intended learning outcomes By the end of this module, students will be able to: Solve and analyze complex financial and non-financial accounting tasks. Analyze and interpret reporting data to support decision-making in various business contexts. | | | | | | | |

| as their text, an ters. Ba sheet th | The module focuses on financial and management accounting, their functions, possible configurations as well as their impact on internal and external recipients under consideration of the institutional setting. In this context, an economic perspective has priority over detailed legal arrangements and regulations by the standard setters. Based on the theoretical foundations of information economics as well as decision-making and balance sheet theories, questions regarding cost accounting, management control systems, behavioral control and decision-making functions of accounting, quality of financial reporting, and publicity are discussed. | | | | | | |
| | | ning outcomes | · · · | | | | |
| Initially account nancial interpre the imp | Initially, students acquire a fundamental knowledge of the conception and impact of management and financial accounting as information systems, as well as the economic impacts of the configuration of management and financial accounting. They understand analytical and empirical models from relevant research literature and can interpret and explain the results. Upon completion of the course, the students are able to assess and evaluate the impacts of changes in institutional general frameworks such as changes in valuation standards, publicity rules or regulations about the distribution of profits in enterprises and on capital markets. | | | | | ment and fi- ure and can d evaluate | |

| industr appliec dies of | The module provides an overview of strategic implications of digital technologies at the level of organisations, industries and value networks. To this end, concepts and frameworks from strategic technology management are applied to digital innovations and illustrated with numerous examples. In the accompanying exercise, case studies of well-known digital companies and their business models are analysed and discussed. | | | | | | |

| autom key me keting scienc The co turn to and m | mance of marketing activities. In fact, it is increasingly possible to use data analysis to inform, make, and even automate marketing decisions. The goal of this course is to provide students with a hands-on understanding of key methods and specific techniques used in marketing analytics. This requires substantive knowledge in mar- keting as well as of fundamental ideas at the intersection of statistics, economics, psychology, and computer science. The course will cover fundamentals of data science, including data wrangling and data exploration, and will then turn to applied, real-world marketing analytics problems such as marketing mix modeling, market segmentation, and measuring preferences and demand. Emphasis will be placed on data visualization and valuable methods for causal inference in marketing. The course will also delve into a few advanced marketing topics. To provide a | | | | | |

| The module provides an overview of strategic implications of digital technologies at the level of organisations, industries and value networks. To this end, concepts and frameworks from strategic technology management are applied to digital innovations and illustrated with numerous examples. In the accompanying exercise, case studies of well-known digital companies and their business models are analysed and discussed. | | | | | | |

| and business start-ups. The focus is on innovative marketing strategies, market research, consumer psychology and the development and implementation of business ideas. Practice-oriented projects, case studies and guest lectures by experienced entrepreneurs and marketing experts provide participants with valuable insights into the practical side of marketing. | | | | | | | | |
| Intende | ed lear | ning outcomes | | | | | | |
| Students learn how to design successful marketing campaigns, analyze market trends and find creative soluti- ons to entrepreneurial challenges. The seminar promotes entrepreneurial thinking and enables students to deve- lop and successfully implement their own business ideas. | | | | | | | | |

| arch and write on a topic in the area of business management and economics, drawing on the subject-specific knowledge they have acquired and adhering to the principles of good scientific practice. This thesis may either take the form of an analysis and structured presentation of the existing literature on a certain topic or may, as is often the case, also include a presentation of the students' own original achievements, e. g. new algorithms de- veloped by students or the (further) development of a theoretical model. | | | | | | | | |
