Content and Objectives of the Programme

The degree subject Biofabrication is offered by the Faculty of Chemistry and Pharmacy of the JMU as a research-oriented degree program with the degree "Master of Science" (M.Sc.).

The program prepares for scientific activities in research, development and application in the interdisciplinary field of biofabrication and a subsequent doctoral program. Upon successful completion of the training, students have in-depth knowledge of scientific work in research and application of biofabrication.

For this purpose, students have the opportunity to deepen the basic knowledge acquired in the first Master's semester in two six-month lab projects.

Through the education and training of analytical thinking, students acquire the ability to later familiarize themselves with varied tasks assigned to them and, in particular, to independently apply the basic knowledge acquired in the degree program and transfer it to new tasks.
Abbreviations used

Course types: E = field trip, K = colloquium, O = conversatorium, P = placement/lab course, R = project, S = seminar, T = tutorial, Ü = exercise, V = lecture

Term: SS = summer semester, WS = winter semester

Methods of grading: NUM = numerical grade, B/NB = (not) successfully completed

Regulations: (L)ASPO = general academic and examination regulations (for teaching-degree programmes), FSB = subject-specific provisions, SFB = list of modules

Other: A = thesis, LV = course(s), PL = assessment(s), TN = participants, VL = prerequisite(s)

Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

In accordance with

the general regulations governing the degree subject described in this module catalogue:

ASPO2015

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.
Compulsory Courses
(80 ECTS credits)
Theoretical Basics of Biofabrication
(20 ECTS credits)

</tr>
</tbody>
</table>

### Contents

- In-depth knowledge and practical application of:
  - free radical polymerisation
  - polyaddition
  - ionic polymerisations
  - controlled radical polymerisation
  - polymer characterisation (e.g. gel permeation chromatography, end-group analysis, mass spectrometry)
  - current aspects of polymer research (e.g. block-copolymers, polymer topographies, polymer functionalisation).

### Intended learning outcomes

Students acquire an advanced knowledge of polymer synthesis, modification and characterisation.

### Courses (type, number of weekly contact hours, language — if other than German)

S (2) + Ü (1)

### Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

- a) written examination (approx. 90 minutes) or b) oral examination of one candidate each (20 minutes) or c) talk (30 minutes)

Language of assessment: German and/or English

**Duration**

<table>
<thead>
<tr>
<th>Module level</th>
<th>Other prerequisites</th>
</tr>
</thead>
<tbody>
<tr>
<td>graduate</td>
<td>--</td>
</tr>
</tbody>
</table>

**Contents**

Definitions within biomaterials, tissue engineering and biofabrication, overview of medical device regulations and practices, description of extracellular matrix, bioprinting, continuous liquid interface polymerisation, two-photon polymerisation, fused deposition modelling, inorganic powder printing, stereolithography, selective laser sintering, melt electrospinning writing, self-healing hydrogels, polymers in 3D printing, introduction to rheology, scientific method and reproducibility, digital signal generation and quality control.

**Intended learning outcomes**

Students gain a thorough appreciation of the different additive manufacturing (3D printing) technologies available in the context of biofabrication. This includes how the polymers are processed and how each class of 3D printer works, with its strengths and weaknesses. A holistic view of biofabrication is taught, with an understanding of scientific methodology for each stage and the different regulations governing medical devices. Students will acquire the necessary skills to critique and develop opinions on the 3D printing industry and the resulting biomedical applications.

**Contents**

Methods of polymer synthesis; composition of polymers and polymer compounds; properties of polymers; technologies for the production of polymers compound and polymer components; means of characterisation of polymer compounds and polymer components.

**Intended learning outcomes**

The students possess knowledge of the special properties of polymers and polymer compounds (e.g. time and temperature dependent viscoelastic behaviour). They know the characteristics of important production technologies (methods of polymer synthesis, compounding technologies, processing methods e.g. injection moulding) and understands the different ways of influencing properties of materials and manufactured products. They have knowledge of ways to calculate complex flow conditions in polymer processing machines and tools.

**Contents**

In-depth knowledge and practical application of: · free radical polymerisation, polyaddition · ionic polymerisations · controlled radical polymerisation · polymer characterisation (e.g. gel permeation chromatography, end-group analysis, mass spectrometry) · current aspects of polymer research (e.g. block-copolymers, polymer topographies, polymer functionalisation).

**Intended learning outcomes**

Students acquire an advanced knowledge of polymer synthesis, modification and characterisation.

**Courses**

(type, number of weekly contact hours, language — if other than German)

S (2) + Ü (1)

**Method of assessment**

(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

a) written examination (approx. 90 minutes) or b) oral examination of one candidate each (20 minutes) or c) talk (30 minutes)

Language of assessment: German and/or English

**Allocation of places**

--

**Additional information**

--

**Referred to in LPO I**

(examination regulations for teaching-degree programmes)

### Contents

Definitions within biomaterials, tissue engineering and biofabrication, overview of medical device regulations and practices, description of extracellular matrix, bioprinting, continuous liquid interface polymerisation, two-photon polymerisation, fused deposition modelling, inorganic powder printing, stereolithography, selective laser sintering, melt electrospinning writing, self-healing hydrogels, polymers in 3D printing, introduction to rheology, scientific method and reproducibility, digital signal generation and quality control.

### Intended learning outcomes

Students gain a thorough appreciation of the different additive manufacturing (3D printing) technologies available in the context of biofabrication. This includes how the polymers are processed and how each class of 3D printer works, with its strengths and weaknesses. A holistic view of biofabrication is taught, with an understanding of scientific methodology for each stage and the different regulations governing medical devices. Students will acquire the necessary skills to critique and develop opinions on the 3D printing industry and the resulting biomedical applications.

## Module title
Polymer Materials 1: Technology of Polymer Modification

## Abbreviation
08-PW1-152-m01

## Module coordinator
holder of the Chair of Chemical Technology of Material Synthesis

## Module offered by
Chair of Chemical Technology of Material Synthesis

## ECTS
<table>
<thead>
<tr>
<th>Method of grading</th>
<th>Only after succ. compl. of module(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>numerical grade</td>
</tr>
</tbody>
</table>

## Duration
1 semester graduate

## Other prerequisites
--

## Contents
Methods of polymer synthesis; composition of polymers and polymer compounds; properties of polymers; technologies for the production of polymers compound and polymer components; means of characterisation of polymer compounds and polymer components.

## Intended learning outcomes
The students possess knowledge of the special properties of polymers and polymer compounds (e.g. time and temperature dependent viscoelastic behaviour). They know the characteristics of important production technologies (methods of polymer synthesis, compounding technologies, processing methods e.g. injection moulding) and understands the different ways of influencing properties of materials and manufactured products. They have knowledge of ways to calculate complex flow conditions in polymer processing machines and tools.

## Courses
(type, number of weekly contact hours, language — if other than German)
V (2) + P (1)

## Method of assessment
(type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)
a) written examination (approx. 90 minutes) or b) oral examination of one candidate each (20 minutes) or c) talk (30 minutes)
Assessment offered: Once a year, winter semester
Language of assessment: German and/or English

## Allocation of places

1 semester | graduate | --

Contents
The module enables the processing of a defined problem within a specified period by applying the scientific methods learned in the course of study.

Intended learning outcomes
The student has the ability to deal with a defined problem/issue using scientific methods and to document the results.

Courses (type, number of weekly contact hours, language — if other than German)
No courses assigned to module

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)
written thesis (approx. 60 pages)
Language of assessment: German and/or English
