## Learning Outcomes

German contents and learning outcome available but not translated yet.

Der Master-Studiengang "Psychologie: Klinische Psychologie, Psychotherapie und Klinische Neurowissenschaften" bildet den zweiten Teil der psychologisch-psychotherapeutischen Ausbildung an der Universität Würzburg im Rahmen eines konsekutiven Studienmodells mit polyvalentem Bachelor- und spezialisiertem Masterstudiengang. Damit wird der Grundstein für eine wissenschaftliche Tätigkeit, eine qualifizierte praktisch-psychologische Tätigkeit und das Erreichen der Voraussetzungen für die Erteilung einer Approbation als Psychotherapeut/-in gelegt. Das Studium vermittelt entsprechend dem allgemein anerkannten Stand psychotherapiewissenschaftlicher, psychologischer, pädagogischer, medizinischer und weiterer bezugswissenschaftlicher Erkenntnisse die grundlegenden personalen, fachlichen, methodischen, sozialen und umsetzungsorientierten Kompetenzen, die für eine eigenverantwortliche, selbständige und umfassende psychotherapeutische Versorgung von Patienten/-innen aller Altersstufen und unter Berücksichtigung der Belange von Menschen mit Behinderung mittels der wissenschaftlich anerkannten psychotherapeutischen Verfahren und Methoden erforderlich sind. Zugleich befähigt es die Psychotherapeuten/-innen, an der Weiterentwicklung von psychotherapeutischen Verfahren oder von psychotherapeutischen Methoden mitzuwirken sowie sich eigenverantwortlich und selbständig fort- und weiterzubilden und dabei auf der Basis von Kenntnissen über psychotherapeutische Versorgungssysteme auch Organisations- und Leitungskompetenz zu entwickeln.

Die Psychotherapeutische Versorgung umfasst insbesondere die individuellen und patientenbezogenen psychotherapeutischen, präventiven und rehabilitativen Maßnahmen zur Gesundheitsförderung, die der Feststellung, Erhaltung, Förderung und/oder Wiedererlangung der psychischen und physischen Gesundheit von Patienten/-innen aller Altersstufen dienen. Sie findet im Einzel- und Gruppensetting sowie ggf. unter Einbezug weiterer zu beteiligender Personen statt und bezieht Risiken und Ressourcen, die konkrete Lebenssituation, den sozialen, kulturellen und religiösen Hintergrund, die sexuelle Orientierung, die jeweilige Lebensphase der Patienten/-innen sowie Kompetenzen zum Erkennen von Anzeichen für sexuelle Gewalt und deren Folgen mit ein. Dabei werden die institutionellen, rechtlichen und strukturellen Rahmenbedingungen berücksichtigt, die Selbständigkeit der Patienten/-innen unterstützt sowie deren Recht auf Selbstbestimmung beachtet.

Das Studium befähigt insbesondere dazu,

1. Störungen mit Krankheitswert, bei denen psychotherapeutische Versorgung indiziert ist, festzustellen und entweder zu behandeln oder notwendige weitere Behandlungsmaßnahmen durch Dritte zu veranlassen,
2. die mit psychischen Störungen und deren Verlauf und Behandlung assoziierten neurobiologischen Prozesse zu verstehen, zu erklären und dieses Wissen im psychotherapeutischen Prozess nutzen zu können,
3. das eigene psychotherapeutische Handeln im Hinblick auf die Entwicklung von Fähigkeiten zur Selbstregulation zu reflektieren und Therapieprozesse unter Berücksichtigung der dabei gewonnenen Erkenntnisse sowie des aktuellen Forschungsstandes weiterzuentwickeln,
4. Maßnahmen zur Prüfung, Sicherung und weiteren Verbesserung der Versorgungsqualität umzusetzen und dabei eigene oder von anderen angewandte Maßnahmen der psychotherapeutischen Versorgung zu dokumentieren und zu evaluieren,
5. Patienten/-innen, andere beteiligte oder andere noch zu beteiligende Personen, Institutionen oder Behörden über behandlungsrelevante Erkenntnisse zu unterrichten, und dabei indizierte psychotherapeutische und unterstützende Behandlungsmöglichkeiten aufzuzeigen sowie über die aus einer Behandlung resultierenden Folgen aufzuklären,

6. gutachterliche Fragestellungen, die insbesondere die psychotherapeutische Versorgung betreffen, einschließlich Fragestellungen zu Arbeits-, Berufs- oder Erwerbsfähigkeit sowie zum Grad der Behinderung oder der Schädigung auf der Basis einer eigenen Anamnese, umfassender diagnostischer Befunde und weiterer relevanter Informationen zu bearbeiten,
7. auf der Basis von wissenschaftstheoretischen Grundlagen wissenschaftliche Arbeiten anzufertigen, zu bewerten und deren Ergebnisse in die eigene psychotherapeutische Tätigkeit zu integrieren,
8. berufsethische Prinzipien im psychotherapeutischen Handeln zu berücksichtigen,
9. aktiv und interdisziplinär mit den verschiedenen im Gesundheitssystem tätigen Berufsgruppen zu kommunizieren und patientenorientiert zusammenzuarbeiten.

### **Wissenschaftliche Befähigung**

- Die Absolventen/-innen verfügen über ein kritisches Verständnis der Theorien und Prinzipien der Klinischen Psychologie, Psychotherapie und Klinischen Neurowissenschaften über die Lebensspanne, das den Stand der Fachliteratur sowie zugleich vertiefte Wissensbestände auf dem aktuellen Stand der Forschung einschließt.
- Die Absolventen/-innen verfügen über vertiefte Kenntnisse der forschungsmethodischen und theoretischen Bereiche der Psychologie, Psychotherapie und Klinischen Neurowissenschaften und können auf dieses fundierte Wissen in verschiedenen Spezialgebieten der Klinischen Psychologie und Psychotherapie zur Erlangung neuer Erkenntnisse zurückgreifen.
- Die Absolventen/-innen besitzen ein differenziertes Methodeninventar, um empirische Fragestellungen strukturieren und analysieren zu können. Dies schließt auch Kenntnisse der biopsychologischen Methoden ein, die für das Verständnis der neurowissenschaftlichen Grundlagen psychopathologischen Verhaltens relevant sind.
- Die Absolventen/-innen verfügen über einen breiten Überblick über die Teilgebiete der Psychologie und Psychotherapie und können diese vor dem Hintergrund der (wissenschafts-)theoretischen Grundlagen des Faches einordnen und bewerten.
- Die Absolventen/-innen kennen angrenzende Gebiete der Psychologie und Psychotherapie sowie interdisziplinäre Zusammenhänge.
- Die Absolventen/-innen sind in der Lage, mit Fachvertretern auf dem aktuellen Stand der Forschung psychologische Fragestellungen zu diskutieren.
- Die Absolventen/-innen sind in der Lage, sich anhand von Primärliteratur, insbesondere in englischer Sprache, in den aktuellen Forschungsstand eines Spezialgebiets einzuarbeiten, diesen zu reflektieren und daraus Frage- und Problemstellungen abzuleiten.

### **Befähigung zur Aufnahme einer Erwerbstätigkeit**

- Die Absolventen/-innen sind in der Lage, unter Anwendung der wissenschaftlichen Arbeitsweise und unter Beachtung der Regeln guter wissenschaftlicher Praxis psychologische Fragestellungen selbstständig zu bearbeiten und die Ergebnisse ihrer Arbeit darzustellen, zu bewerten und öffentlich zu vertreten.
- Die Absolventen/-innen sind in der Lage, ihr Wissen selbstständig zu erweitern und sie können sich neue Methoden selbstständig aneignen.
- Die Absolventen/-innen haben fundiertes Wissen über die Teildisziplinen der Psychologie und Psychotherapie und kennen die beruflichen Anwendungsfelder.
- Die Absolventen/-innen verfügen über ein breites Wissen über ihr Studienfach hinaus. Sie haben grundlegendes Wissen in nicht originär psychologischen Disziplinen, die aber relevant für psychologische und psychotherapeutische Forschung und Berufspraxis sind oder Tätigkeitsfelder für Psychologen/-innen bieten.

### **Persönlichkeitsentwicklung**

- Die Absolventen/-innen kommunizieren und kooperieren mit anderen Fachvertretern/-innen, um eine Aufgabenstellung verantwortungsvoll zu lösen und binden Beteiligte unter Berücksichtigung der jeweiligen Gruppensituation zielorientiert in Aufgabenstellungen ein.
- Die Absolventen/-innen kennen die Regeln guter wissenschaftlicher Praxis und reflektieren ihr berufliches Handeln in Bezug auf diese.
- Die Absolventen/-innen verfügen über die Fähigkeit, eigenverantwortlich und selbstständig zu arbeiten. Auch in einem internationalen Umfeld sind sie dazu in der Lage, neue Themen selbstständig zu erschließen und Kontakte zu knüpfen.

## Abbreviations used

Course types: **E** = field trip, **K** = colloquium, **O** = conversatorium, **P** = placement/lab course, **R** = project, **S** = seminar, **T** = tutorial, **Ü** = exercise, **V** = lecture

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B/NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programmes), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: **A** = thesis, **LV** = course(s), **PL** = assessment(s), **TN** = participants, **VL** = prerequisite(s)

## Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

## Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

German contents and learning outcome available but not translated yet.

### Approbationskriterien:

Um den berufsrechtlichen Voraussetzungen für ein Studium zur Approbation in Psychotherapie nach § 7 und § 9 des Gesetzes über den Beruf der Psychotherapeutin und des Psychotherapeuten (PsychThG) und der Anlage 1 der Approbationsordnung für Psychotherapeutinnen und Psychotherapeuten (PsychTh-ApprO) zu entsprechen, müssen alle hier aufgeführten Module abgeschlossen werden, die Berufspraktische Tätigkeit Psychotherapie III abgeleistet worden sein. Die Berufspraktische Tätigkeit Psychotherapie III muss in interdisziplinären Einrichtungen der ambulanten und stationären oder teilstationären Gesundheitsversorgung unter Anleitung einer Person erfolgen, die über eine der folgenden Qualifikationen verfügt: Psychotherapeut/-in mit abgeschlossener Weiterbildung, oder Psychologische Psychotherapeut/-in, oder Kinder- und Jugendlichenpsychotherapeut/-in mit entsprechender Fachkunde. Praktikumstätigkeiten, die vor dem Studium abgeleistet worden sind, können auf Antrag an den Vorsitzenden des Prüfungsausschusses als Orientierungspraktikum Psychotherapie anerkannt werden, sofern die vorgenannten Betreuungsvoraussetzungen erfüllt sind.

### Anwesenheitspflicht:

Gemäß § 5 der Approbationsordnung für Psychotherapeutinnen und Psychotherapeuten (PsychTh-ApprO) besteht in den Veranstaltungen der hochschulischen Lehre gem. Anlage 2 PsychTh-ApprO, soweit dort praktische Kompetenzen erworben werden sollen, sowie in den in §§ 17 und 18 der PsychTh-ApprO gere-

gelten berufspraktischen Erfahrungen zwingende Anwesenheitspflicht. Um diese zu erfüllen, müssen die Studierenden in mindestens 85 % der den mit Anwesenheitspflicht gekennzeichneten Module zugeordneten Veranstaltungen anwesend sein, in den Modulen des Bereichs Berufspraktische Einsätze - berufsqualifizierende Tätigkeit III Angewandte Praxis der Psychotherapie sind die angegebenen Präsenzzeiten nachzuweisen.

## In accordance with

the general regulations governing the degree subject described in this module catalogue:

### **ASPO2015**

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

**13-Jul-2022 (2022-53)**

**19-Apr-2023 (2023-39)**

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

5	numerical grade	--
<b>Duration</b>	<b>Module level</b>	<b>Other prerequisites</b>
1 semester	graduate	--
<b>Contents</b>		
Students obtain knowledge and abilities in applying multivariate statistical techniques and measurement theory (e.g. multiple regression, multifactorial ANOVA (mixed), ANCOVA, discriminant analysis) to evaluate scientific results and integrate this knowledge, e.g., to their own psychotherapeutical practice. The computations are performed using appropriate statistical software with sample data sets, and interpretation of results is trained.		
<b>Intended learning outcomes</b>		
Students get knowledge about different complex statistical procedures and the ability to select adequate procedures for testing hypotheses, to perform the procedures using modern statistical software, display the results consistently and to interpret results with respect to limitations of the statistical procedures appropriately. In addition, the application of complex and multivariate survey and evaluation methods for the evaluation and quality assurance of interventions is learned.

<b>Contents</b>		
<p>The core topics of this course are the methods of setting goals, planning, creating and presenting psychological reports related to psychotherapy as well as the assessment of issues of incapacity for work, occupational disability and the degree of disability or the degree of damage. In addition, the basics for assessing issues with content relevant to family or criminal law are imparted. The students learn to develop and evaluate psychodiagnostic procedures based on current test-theoretical models. The preparation of expert opinions on clinical-psychological or psychotherapeutic questions based on the general state of scientific assessment is learned using case studies. In addition, the students learn, based on scientific criteria, to decide which diagnostic methods are to be used according to the situation, taking into account the respective question, including age, personality traits, the social environment, and the emotional and intellectual level of development of patients. Diagnostic models and methods are also taught in the expert opinion module.</p>		
<b>Intended learning outcomes</b>		
<p>The students are able to prepare reports on clinical-psychological or psychotherapeutic questions according to the general state of the scientific assessment, to decide according to scientific criteria which diagnostic procedures are taking into account the respective question including age, personality traits, social environment and the emotional and intellectual level of development of patients. They can carry out these procedures in individual cases, evaluate and interpret the results and process and evaluate scientifically expert questions pertaining to psychotherapeutic care, including questions about work, occupational and occupational disability as well as the degree of disability or the degree of damage.</p>		
<b>Courses</b> (type, number of weekly contact hours, language – if other than German)		
S (2) Module taught in: German and/or English

<b>Contents</b>		
<p>The specialization in clinical diagnostics offers practical examples of topics and methods of clinical diagnostics based on case studies. The students learn to decide which diagnostic methods are to be used according to the situation and the individual case. They carry out these procedures in individual cases, evaluate the results and interpret the results.</p>		
<b>Intended learning outcomes</b>		
<p>Students acquire in-depth knowledge of various more complex diagnostic methods and procedures, as well as, on the basis of current test-theoretical models, the ability to develop, select, perform, present and interpret them. They will learn how to use diagnostic procedures to identify risk profiles, suicidal tendencies, signs of child welfare as well as signs of violent physical, psychological, sexual experiences and unfavorable treatment courses. They can systematically collect and assess progress and change processes. Finally, the students learn to recognize where the limits of their own diagnostic competence and judgment lie and learn to initiate measures for their own support and to recognize their necessity.</p>

## **Special failure and process theory - basics**

(11 ECTS credits)

<b>Module title</b>		<b>Abbreviation</b>
Clinical Psychology - Disorder-specific Psychotherapy; Intervention Psychology - Evidence-based Psychotherapy 1 (Settings: single, couple, family and group therapy)		o6-PSY-MAKLIN-SpezSV-1-222-mo1
<b>Module coordinator</b>		<b>Module offered by</b>
holder of the Professorship of Psychological Intervention; holder of the Professorship of Biological Psychology, Clinical Psychology, and Psychotherapy		Institute of Psychology
<b>ECTS</b>	<b>Method of grading</b>	<b>Only after succ. compl. of module(s)</b>
5	numerical grade	--
<b>Duration</b>	<b>Module level</b>	<b>Other prerequisites</b>
1 semester	graduate	--
<b>Contents</b>		
<p>This module consists two seminars.</p> <p>Seminar 1 provides comprehensive and in-depth knowledge of disorder-specific, psychotherapeutic treatment of adult patients and the specifics of the disorders. This knowledge includes the psychological-psychotherapeutic, psychobiological and neuroscientific basics of the various disorders with their respective specifics and problems, as well as current knowledge of neuropsychotherapy. Scientifically tested and recognized psychotherapeutic procedures and methods with their respective characteristics are presented.</p> <p>Seminar 2 includes psychotherapeutic treatment by setting (individual therapy, couple and family therapy, group therapy, emergency and crisis intervention) and the specifics of the settings. Comprehensive and in-depth knowledge of the psychotherapeutic treatment of adult patients with psychological problems and disorders in different phases of life, including higher age, physical illnesses, physical or mental disabilities with the respective specifics and problems, which are requiring psychotherapeutic treatment in different settings (e.g. individual therapy, couple and family therapy, group therapy, as well as in emergency and crisis situations) will be taught.</p>		
<b>Intended learning outcomes</b>		
<p>The goal of the seminars are the theoretically and empirically supported skills to independently design a case and plan treatment based on preceding diagnostics, differential diagnostics, classification and knowledge of the appropriate empirically supported treatment guidelines in adult psychotherapy, taking into account different age groups, handicaps, treatment settings and psychological and neuropsychological disorders. The students acquire in-depth knowledge in order to assess and explain the opportunities, risks and limits of the various empirically supported and admitted psychotherapeutic procedures and methods depending on the inter-individual personal characteristics of the patients but also on institutional and social conditions. In addition, students will be able to explain psychologically and physically co-conditioned disorders in childhood, adolescence and adulthood, including older age, based on the current state of science, as well as to explain their own assessment of the opportunities, risks and limitations of the various scientifically tested and recognized psychotherapeutic procedures and methods to patients, other persons involved or to be involved, institutions or authorities. Independent work on patients is not yet expected.</p> <p>These goals can only be achieved by regular attendance, active participation and active lecture work.</p>

<b>Contents</b>		
Basic terms of psychopathology, psychometry and neuropsychology, schizophrenic psychoses, bipolar affective and depressive disorders, suicidality, anxiety and obsessive-compulsive disorders, somatoform disorders, dissociative disorders, eating disorders, addiction and dependence disorders.		
<b>Intended learning outcomes</b>		
The students know basic psychopathological terms as well as psychiatric and psychosomatic clinical case studies, their course, diagnostics, differential diagnosis and therapy. The students have basic knowledge of test psychological procedures as a supporting diagnostic tool for the diseases in question and know psychotherapeutic treatment approaches. They acquire knowledge of psychiatric emergencies, acute psychiatric treatment, psychotherapeutic procedures and psychopharmacology on the basis of scientifically founded treatment guidelines.

(7 ECTS credits)

<b>Module title</b>		<b>Abbreviation</b>
<b>Evidence-based Psychotherapy 2 (Further Development and New Psychotherapeutic Procedures); Documentation and Evaluation of psychotherapeutic Treatments</b>		o6-PSY-MAKLIN-SpezSV-4-222-mo1
<b>Module coordinator</b>		<b>Module offered by</b>
holder of the Professorship of Psychological Intervention		Institute of Psychology
<b>ECTS</b>	<b>Method of grading</b>	<b>Only after succ. compl. of module(s)</b>
7	numerical grade	--
<b>Duration</b>	<b>Module level</b>	<b>Other prerequisites</b>
2 semester	graduate	--
<b>Contents</b>		
<p>This module consists of two seminars.</p> <p>Seminar 1 conveys the scientific-theoretical anchoring of therapeutic procedures based on the knowledge of current psychotherapy research and gives comprehensive insights into the further development of existing as well as the development of new psychotherapeutic methods, e.g. mindfulness procedures, schema therapy etc. The phases of scientifically based new development, scientific recognition up to the social law approval of new psychotherapeutic procedures are treated theoretically and practically using different examples. In-depth knowledge of efficacy, process research and evaluation, in particular neuroscientific knowledge, is taught and applied to relevant research studies and their results are assessed for psychotherapy. On this basis, concrete examples of psychotherapeutic treatment methods (existing, new and further developments) and their integration into the case conception and treatment planning of psychotherapeutic interventions based on evidence-based psychotherapeutic procedures are analyzed and critically evaluated with regard to an economic approach in practice.</p> <p>In the seminar 2 on the organization, documentation and evaluation of psychotherapeutic treatments, methods and procedures for quality assurance and quality management of institutional and individual psychotherapeutic actions are taught and illustrated using examples. In addition, measures to check secure and further improve current psychotherapeutic care taking into account the requirements of the health system are discussed, critically questioned and evaluated. Additionally, knowledge about the responsibilities and competencies of the professional groups in the healthcare system as well as special features of management functions are conveyed.</p>		
<b>Intended learning outcomes</b>		
<p>In Seminar 1, students are enabled to evaluate, use and critically reflect on relevant scientific studies and their results, also with regard to new and further developments of psychotherapeutic procedures, and are thus able to use them for psychotherapy. They learn to evaluate (neuro-)scientific findings as well as new or further developments in psychotherapy with regard to their research approach and their significance in terms of content and methodology, so that well-founded decisions for action can be derived for psychotherapeutic diagnostics, for psychotherapeutic interventions and for counseling. In addition, they can incorporate current psychotherapeutic methodological developments into independent, scientifically based case conception and treatment planning and thus act in an evidence-based, psychotherapeutic manner. In doing so, they also learn to take into account the special features of the respective age groups, disorder patterns, emotional, physiological and intellectual developmental status and the social and illness context. In this way, students are able to explain mental disorders, mentally co-conditioned illnesses and associated neurobiological processes in all age groups on the basis of the current state of the art.</p> <p>The objectives of Seminar 2 - Documentation and Evaluation - are to enable students to document and evaluate their psychotherapeutic actions, both in individual cases and in the treatment setting, using scientific methodological knowledge and taking into account quality-relevant aspects: They learn to assess measures of continuous quality management and quality improvement as well as the structural, process, and outcome quality of psychotherapeutic and psychosocial measures and settings and to independently take appropriate measures to ensure patient safety. This also considers the need for collaboration in and guidance of interdisciplinary teams. These goals can only be achieved by regular attendance, active participation and active lecture work.</p>		
<b>Courses</b> (type, number of weekly contact hours, language — if other than German)		
S (2) + S (2)		
Module taught in: German and/or English		

<b>Method of assessment</b> (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus)
<p>presentation (approx. 30 minutes) or                      case study (approx. 120 minutes) or                      exercises to be answered during the semester (approx. 0.5 pages per session)                      Language of assessment: German and/or English                      The seminar Documentation and Evaluation of psychotherapeutic Treatments is creditable for bonus</p>
<b>Allocation of places</b>
<p>max. 20 places                      Should the number of applications exceed the number of available places, places will be allocated as follows:                      places will be allocated according to the number of subject semesters. Among applicants with the same number                      of subject semesters, places will be allocated by lot.</p>

# Applied Psychotherapy

(5 ECTS credits)

<b>Module title</b>		<b>Abbreviation</b>
<b>Applied Psychotherapy - Supply Systems of outpatient psychotherapy; Applied Psychotherapy - Clinical and psychosocial care</b>		o6-PSY-MAKLIN-anPT-1-222-mo1
<b>Module coordinator</b>		<b>Module offered by</b>
holder of the Professorship of Psychological Intervention		Institute of Psychology
<b>ECTS</b>	<b>Method of grading</b>	<b>Only after succ. compl. of module(s)</b>
5	numerical grade	--
<b>Duration</b>	<b>Module level</b>	<b>Other prerequisites</b>
1 semester	graduate	--
<b>Contents</b>		
<p>Seminar 1 deals with the characteristics of the health and care system with special attention to mental disorders with psychopathological status, for which psychotherapy is indicated. This includes outpatient psychotherapy for children, adolescents, adults, the elderly and people with disabilities. The possibilities of using digital technologies (e.g. video or internet-based psychotherapy) in outpatient psychotherapy are also discussed here.</p> <p>Seminar 2 deals with inpatient care and daycare for people with mental disorders, in particular in behavioral medicine/psychosomatics, neurology, geriatrics, neuropsychology, forensics and psychiatry, as well as psychosocial care in particular in counseling, prevention and rehabilitation.</p> <p>Both seminars deal with the content also from the point of view of ethical action and decision-making, considering occupational and social law, health policy and health economic aspects, e.g. patient rights, patient safety, costs and benefits of psychotherapy, opportunities for primary and secondary preventive measures and social law consequences of the requirements imposed by the health care system.</p>		
<b>Intended learning outcomes</b>		
<p>The students have the opportunity to gain a broad knowledge regarding the situation and (social) security of mentally ill individuals of different ages and with different requirements in the German health care system. They learn to consider these points in treatment planning for different settings including in- or outpatient care with their specific indications respectively, as well as assessing the need for alternative or additive care through psychological, psychosocial, educational, socio-educational, rehabilitative or medical interventions and to initiate these interventions when necessary. Furthermore, quality assurance measures are taught and their application is learned.</p> <p>On this basis, skills and abilities for critical examination of ethical, social law, health policy and health economic questions are practiced. These goals can only be achieved by regular attendance, active participation and active lecture work.</p>

## **Job qualifying activity (BQT II) and self-reflection**

(17 ECTS credits)

<b>Module title</b>		<b>Abbreviation</b>
<b>BQT II - In-depth Practice of Psychotherapy I: Psychotherapeutic Procedures and Methods for the Treatment of Adults and the Elderly</b>		o6-PSY-MAKLIN-qualT-1-222-mo1
<b>Module coordinator</b>		<b>Module offered by</b>
holder of the Professorship of Biological Psychology, Clinical Psychology, and Psychotherapy; holder of the Professorship of Psychological Intervention		Institute of Psychology
<b>ECTS</b>	<b>Method of grading</b>	<b>Only after succ. compl. of module(s)</b>
5	numerical grade	--
<b>Duration</b>	<b>Module level</b>	<b>Other prerequisites</b>
1 semester	graduate	--
<b>Contents</b>		
<p>The topic of the seminar is concerned with teaching detailed knowledge and providing practical guidance as well as hands-on practice regarding patient-therapist interaction, building rapport and a psychotherapeutic relationship, as well as various specific, scientifically tested psychotherapeutic interventions and methods that are part of psychotherapeutic treatments in adults at all ages. This includes psycho-education, counselling skills, initial psychotherapeutic conversations, methods for analysis of problems and goalsetting as well as the integration of such methods into an overarching treatment plan, and informed consent including patient education on the mental disorder, its development, associated neurobiological processes and the treatment rationale of the various psychotherapy schools.</p> <p>Practical exercises will be carried out in the form of self-reflection, video analyzes, and by observing patient models (actors or volunteer outpatients).</p>		
<b>Intended learning outcomes</b>		
<p>The students are trained in small groups under expert guidance to practice different concrete psychotherapeutic basic techniques, procedures, and methods and learn to accept and provide constructive feedback. This module also focuses on the independent recognition of emergency and crisis situations, including suicidality, signs of violent experiences of a physical, psychological or sexual nature, as well as undesirable developments in the course of treatment and the taking of appropriate measures to prevent harm to patients. These goals can only be achieved by regular attendance, active participation and active lecture work.</p>		
<b>Courses</b> (type, number of weekly contact hours, language – if other than German)

<b>Contents</b>		
<p>The topic of the course is concerned with teaching detailed knowledge of risks, side effects, costs, benefits and failure in psychotherapy and its prevention, providing practical guidance as well as hands-on practice regarding psychotherapeutic techniques also in challenging therapy situations, as well as in crisis and emergency situations, including suicidality. The students pay attention to aspects of the therapeutic relationship in order to recognize problems in the treatment and motivation for change in patients and therapists, to address them appropriately and to solve them in a suitable manner. They also learn to integrate the neurobiological processes associated with mental disorders and their treatment into the assessment of success prognosis and failure detection. In exercises, further psychotherapeutic methods with scientific evidence, and/or scientifically well-supported new developments in psychotherapy are discussed in detail. Topics are discussed and implemented in exercise-oriented small groups by students on their own under expert guidance. Difficult therapy situations, adverse events in the course of therapy and failures are discussed and guidance will be provided for each case based on the framework of the respective psychotherapeutic method.</p>		
<b>Intended learning outcomes</b>		
<p>The students will learn basic and applied competences in the area of research in psychotherapy and the implementation of these competences in an evidence-based individual action for later practical application as a psychotherapist. They will be able to evaluate the scientific quality of psychotherapeutic methods and their scientific evaluation. These goals can only be achieved by regular attendance, active participation and active lecture work.</p>

<p>In self-experience groups guided by a psychotherapist, the students get to know self-reflection as an inner attitude, a lifelong learning process and a skill that must be developed and promoted so that it can establish itself as an integral part of everyday professional life. In addition, they experience the effects of various therapeutic techniques in fixed groups, take on each other's different roles in the therapy process, are instructed to adopt a mindful, accepting attitude towards emotions and external stimuli, and reflect on all these experiences in writing.</p>		
<b>Intended learning outcomes</b>		
<p>The students reflect on their psychotherapeutic actions, the strengths and weaknesses of their own personality and the effects of these on their own psychotherapeutic actions and their individual limits and are guided to derive suitable measures from this reflection. They accept suggestions for improvement and thus learn to increase their individual, psychotherapeutic efficiency before and during the therapy process. In addition, individual skills for self-regulation and perception of one's own emotions, cognitions and motivations are improved and expanded in the context of therapeutic action, in order to take them into account when optimizing therapeutic processes.</p> <p>These goals can only be achieved by regular attendance, active participation and active lecture work.</p>

<b>Contents</b>		
<p>The internship psychotherapy research serves to acquire in-depth practical experience in the research of psychological, psychosomatic and/or neuropsychological disorders, their associated neurobiological processes, and their psychotherapeutic treatment. The students learn how to implement essential quality criteria of scientific studies in a psychotherapeutic context when planning, implementing, evaluating and presenting scientific studies. These experiences are to be taken into account for designing an own scientific study. This in turn serves to promote psychotherapeutic skills from participating study therapists and contributes to the quality assurance of the therapist's behavior in therapy studies.</p> <p>The internship includes the independent observation of human experience and behavior, human development including social influences and biological components. In addition, the process of considering research results in patient-specific care and for care innovation is taught.</p>		
<b>Intended learning outcomes</b>		
Students will be empowered to carry out their own scientific study in small groups under expert guidance. They actively plan and implement the study, acquire data and present the results in a scientific context. These goals can only be achieved by regular attendance, active participation and active lecture work.

In the seminar on the Master's thesis, the students present the status of their work in the planning and results phase in written and oral form and thus have the opportunity to discuss and provide assistance with fellow students and experts in the respective research field.		
<b>Intended learning outcomes</b>		
The students' methodological and content-related knowledge of clinical psychology, psychotherapy or clinical neuroscience enables them based on the current state of the scientific literature to deduce a research question and write it down in an exposé. Before completing the work, the students also learn to present, discuss and defend their approach, the process and the results of their thesis.
