### **Learning Outcomes**

#### **Scientific Qualification**

- The graduates know the key topics, theories and results on human experience and behavior when engaging with digital media.
- The graduates are able to independently identify and reflect upon the state of scientific knowledge regarding a focal phenomenon. This includes a critical evaluation of different sources.
- The graduates are able to develop and formulate research questions that can be tested empirically.
- The graduates have a inventory of methods at their disposal, which enables them to answer psychological research questions based on empirical studies.
- The graduates can take different perspectives on questions about human experience and behavior when dealing with digital media. Such perspectives are psychological (e.g., from developmental psychology, educational psychology, personality psychology) as well as perspectives from computer science and perspectives above and beyond disciplinary boundaries.

#### **Employment qualifications**

- The graduates can understand and reflect upon questions about human experience and behavior when engaging with digital media that are asked by stakeholders from business and society.
- The graduates answer questions about human experience and behavior when engaging with digital media that are asked by stakeholders from business and society, based on existing theories and results.
- The graduates answer questions about human experience and behavior when engaging with digital media that are asked by stakeholders from business and society, by conducting empirical studies.

#### **Self-development**

- The graduates are able to understand and reflect upon questions and perspectives from other disciplines, especially from computer science.
- The graduates can contribute their own knowledge and skills into interdisciplinary teams, and they can word efficiently in these teams.

#### **Empowerment for social engagement**

- The graduates are able to take part in the social discourse about digital communication and they can develop a standpoint.
- The graduates know the challenges for democracies caused by digital communication and social media and the graduates can contribute to mastering these challenges.

#### **Abbreviations used**

Course types:  $\mathbf{E} = \text{field trip}$ ,  $\mathbf{K} = \text{colloquium}$ ,  $\mathbf{O} = \text{conversatorium}$ ,  $\mathbf{P} = \text{placement/lab course}$ ,  $\mathbf{R} = \text{project}$ ,  $\mathbf{S} = \text{seminar}$ ,  $\mathbf{T} = \text{tutorial}$ ,  $\ddot{\mathbf{U}} = \text{exercise}$ ,  $\mathbf{V} = \text{lecture}$ 

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B/NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programmes), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: **A** = thesis, **LV** = course(s), **PL** = assessment(s), **TN** = participants, **VL** = prerequisite(s)

#### **Conventions**

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

#### **Notes**

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

#### In accordance with

the general regulations governing the degree subject described in this module catalogue:

#### ASP02015

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

#### 12-May-2022 (2022-41)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

## **Compulsory Courses**

The internship aims to provide insights into fields of employment with relevance to the psychology of digital media. The internship provides an opportunity for students to enhance their acquired knowledge and skills by applying them to practical issues. Students will further get an opportunity to gain additional practical experience in the field before entering the labor market.

#### Intended learning outcomes

The internship provides students with an opportunity to apply the knowledge and skills acquired at the university to practical issues of the digital media business. They should obtain practical skills of professionals and reflect those skills against the theoretical background of their university education.

| The module offers the opportunity to choose from a defined selection of courses from the various subfields of psychology - provided that access can be made possible within the framework of the admission restrictions. The module thus conveys basic theories, methods and results of the different sub-fields of psychology, e.g., cognitive psychology, social psychology, differential psychology or general psychology. |       |               |                      |                    |                     |  |

#### **Intended learning outcomes**

The students are familiar with basic theories, methods and results from the respective subfield of psychology and gain an overview of the central questions and the subject area of the different psychological fields. In addition to the importance for their research-related competencies, they also learn about references to application-related issues.

#### **Contents**

This module provides in-depth content, methods and applications of user experience research, i.e. the design of human-computer systems with regard to a good user experience. Examples of application come from the public and private spheres and include, for example, customer satisfaction, persuasive interfaces, aesthetic design and service design.

#### **Intended learning outcomes**

After participating in this module, students will be able to name the principles of selected user experience methods and domains and will be able to design user interfaces themselves as well as conduct studies to investigate corresponding questions from the field of human-system interaction. Furthermore, they will be able to explain the advantages and disadvantages of different user experience methods, analyze and evaluate empirical studies as well as design solutions.

| Lumar  | Comp    | utor Interaction is so | ncorned with the decign | avaluation and imn                | lomentation of interactive com |

Human-Computer Interaction is concerned with the design, evaluation and implementation of interactive computing systems for human use and with the study of major phenomena surrounding them. This course gives an introduction into the principle biological, physiological, and psychological constraints as defined by the human user and relates these constraints to the conceptual and technical solutions of today's computer systems and existing as well as prospective interaction metaphors between humans and computers.

The course covers topics about human perception and cognition, memory and attention, the design of interactive systems, prominent evaluation methods, the principles of computer systems, typical input processing techniques, interface technology, and examples of typical interaction metaphors, from text-based input to graphical desktops to multimodal interfaces. Accompanying lab-work will introduce students to typical tasks involved in this field, i.e., prominent evaluation methods and prototyping of interfaces.

#### Intended learning outcomes

After the course, the students will have a broad understanding of the underlying principles of human users and computer systems. They will understand the constraints and capabilities of current user interfaces and they will learn about the necessary steps applied in user-centered design and development approaches.

This course provides an introduction into the requirements, concepts, and engineering art of highly interactive human-computer systems. Such systems are typically found in perceptual computing, Virtual, Augmented, Mixed Reality, computer games, and cyber-physical systems. Lately, these systems are often termed Real-Time Interactive Systems (RIS) due to their common aspects. The course covers theoretical models derived from the requirements of the application area as well as common hands-on and novel solutions necessary to tackle and fulfill these requirements. The first part of the course will concentrate on the conceptual principles characterizing real-time interactive systems. Questions answered are: What are the main requirements? How do we handle multiple modalities? How do we define the timeliness of RIS? Why is it important? What do we have to do to assure timeliness? The second part will introduce a conceptual model of the mission-critical aspects of time, latencies, processes, and events necessary to describe a system's behavior. The third part introduces the application state, it's requirements of distribution and coherence, and the consequences these requirements have on decoupling and software quality aspects in general. The last part introduces some potential solutions to data redundancy, distribution, synchronization, and interoperability. Along the way, typical and prominent state-of-theart approaches to reoccurring engineering tasks are discussed. This includes pipeline systems, scene graphs, application graphs (aka field routing), event systems, entity and component models, and others. Novel concepts like actor models and ontologies will be covered as alternative solutions. The theoretical and conceptual discussions will be put into a practical context of today's commercial and research systems, e.g., X3D, instant reality, Unity3d, Unreal Engine 4, and Simulator X.

#### **Intended learning outcomes**

After the course, the students will have a solid understanding of the boundary conditions defined by both, the physiological and psychological characteristics of the human users as well as by the architectures and technological characteristics of today's computer systems. Participants will gain a solid understanding about what they can expect from today's technological solutions. They will be able to choose the appropriate approach and tools to solve a given engineering task in this application area and they will have a well-founded basis enabling them to develop alternative approaches for future real-time interactive systems.

**Courses** (type, number of weekly contact hours, language — if other than German)

V (2)

Module taught in : German and/or English

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

written examination (approx. 90 minutes)

Language of assessment: German and/or English

#### Contents

Project goals, project assignment, project success criteria, business plan, environment analysis and stakeholder management, initialisation, definition, planning, execution/control, finishing of projects, reporting, project communication and marketing, project organisation, team building and development, opportunity and risk management; conflict and crisis management, change and claim management; contract and procurement management, quality management, work techniques, methods and tools; leadership and social skills in project management, project management, project portfolio management, PMOs; peculiarities of software projects; agile project management/SCRUM, combination of classic and agile methods.

#### **Intended learning outcomes**

The students possess practically relevant knowledge about the topics of production management and/or professional project management. They are familiar with the critical success criteria and are able to initiate, define, plan, control and review projects.

**Courses** (type, number of weekly contact hours, language — if other than German)

V (4)

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

written examination (approx. 60 to 120 minutes).

If announced by the lecturer at the beginning of the course, the written examination may be replaced by an oral examination of one candidate each (approx. 20 minutes) or an oral examination in groups of 2 candidates (approx. 15 minutes per candidate).

creditable for bonus

Language of assessment: German and/or English

#### **Contents**

This course will introduce students to relevant subject areas of business administration. Students will acquire an overview of the different perspectives and main points of view from which a theoretical examination of business enterprise may take place. The course will focus on what companies or other organisations are, how they behave and in what form they are organised. For this purpose, a study will be made of the economic subject's decision-making behaviour.

Reading list to be provided during lecture.

#### **Intended learning outcomes**

The aim of the lectures is to familiarise the students with the basic problem issues and perspectives within the field of business administration.

**Courses** (type, number of weekly contact hours, language — if other than German)

E-business is a comprehensive, digital processing of business transactions between private and public enterprises as well as institutions and their clients on global public and private networks such as the internet. Precisely because euphoria for e-business has waned considerably in recent years, a lot of emphasis is now being placed on introducing such solutions in a user-oriented way. This lecture will first discuss the supporting economic theories and will then describe and analyse individual solutions such as e-procurement, e-shop, e-marketplace and e-community in detail.

# Intended learning outcomes

The module provides students with knowledge about:

- (i) E-Procurement
- (ii) E-Shop
- (iii) E-Marketplace
- (iv) E-Community

Courses (type, number of weekly contact hours, language - if other than German)

# Contents

This module focuses on the relationship of offer characteristics with benefit aspects for the end consumer and the business models on the part of the providers. Starting from the basics of editorial work and professional text management, the new forms of communication management in social networks are presented. The focus of the lecture is on the use of social media in campaigns (Facebook, Twitter, Instagram, Tiktok). There will also be exercises on various Web 2.0 applications (e.g. online social networks) and on the collection and interpretation of online market research data. However, crisis communication of companies will also be covered in particular opinion-makers on the web as well as protest culture on the web.

# **Intended learning outcomes**

By participating in the module courses, students acquire job-specific skills in research and interviewing. Students are able to collect and organize information according to criteria of topicality and relevance. In addition, students are taught journalistic expertise so that they are able to recognize the forms of presentation of news, reports, and background reports with their media characteristics and communicative functions in different media genres and create them themselves. Students will be able to prototype and design a social media campaign, describe the editorial and technical approach including feedback, response, and customer engagement. In addition, students will be able to design counter-strategies for corporate communication crises.

**Courses** (type, number of weekly contact hours, language — if other than German)

#### Contents

Online and cross-media journalism takes into account the current media convergence. This seminar focuses on the individual elements and phases of production for the website, Facebook, Instagram, Twitter, and Tiktok against the background of current trends and developments. In addition, the seminar covers current trends in journalism. In addition to content-related topics, the focus is also on new methods (e.g. of storytelling), as well as technical developments.

# **Intended learning outcomes**

After successful completion, students will be able to name the individual phases of online and cross-media journalism and carry them out on sample projects, explain and go through the individual production stages, use methods and tools for the individual steps.

**Courses** (type, number of weekly contact hours, language — if other than German)

In this seminar, students learn the basics of audiovisual forms of presentation (news, background report, reportage). They are first introduced to the use of cameras and editing. Students learn how to set news and stories in the picture and how to organize shoots. Television-specific journalistic basics such as the structure and design of a television report, organization, and handling of different filming situations, creating storyboards, copywriting, and speaking are learned.

### **Intended learning outcomes**

Upon completion of the seminar, students will be able to apply editorial and technical knowledge and skills (including teamwork) to the production of television features.

**Courses** (type, number of weekly contact hours, language — if other than German)

Economic journalism is often regarded as unwieldy, but the reporting usually revolves around content that many media users can relate to: The focus is on market developments and (economic) political conditions. How can these topics be presented in a way that is clear, easy to understand, and yet as precise as possible? What makes for good economic reporting? What research options and forms of presentation are available? Such questions will first be answered using examples from various media. Subsequently, the students will work on the main topic themselves. The seminar is thematically oriented towards current research projects/projects of the Chair of Business Journalism and Business Communication and can therefore vary thematically per semester.

# **Intended learning outcomes**

Students learn the terminology, topics, and framework of economic journalism. After completing the seminar, they will have an overview of selected areas of application. They master the research and the different forms of presentation of economic journalism. The students learn scientific methods to break down complex economic topics in reporting. After completing the seminar, students are able to independently examine journalistic products in response to previously generated research questions and thus evaluate journalistic work. Therefore, students acquire subject as well as specific methodological competencies in this seminar.

# Description:

The course introduces students to the basics of entrepreneurial self-employment. In addition to discussing theoretical concepts covering the definition, creation and performance of new ventures, the course will also discuss methods and instruments for a potential entrepreneurial career. Several content areas of start-up planning are being covered during the course of the lecture including team compilation, business model creation and financing.

#### Contents of the course:

- 1. Introduction to entrepreneurship
- 2. Human resources in start-ups
- 3. Opportunity analysis
- 4. Business modelling
- 5. Entrepreneurship in the digital industry
- 6. Business planning
- 7. Finance
- 8. Marketing in start-ups

#### **Intended learning outcomes**

After completing the module "Entrepreneurship", the students should be able to

- (i) describe and problematize the concept of entrepreneurship and the entrepreneurial perspective;
- (ii) describe and analyze the entrepreneurial process, its drivers, characteristics and context;
- (iii) apply theories within the entrepreneurship field to real life situations;
- (iv) take initiatives and independently develop a business idea and use knowledge gained from earlier courses in business administration in order to develop this idea in a business plan sketch;
- (v) plan human resources and marketing in a start-up.

**Courses** (type, number of weekly contact hours, language — if other than German)

# Contents

The course will provide students with an overview of essential topics of innovation management. Particular emphasis will be on the application of theoretical concepts to practical examples and cases. The course will develop the innovation process starting with the idea and ending with the market entry of an innovation. The course will consist of two core elements: 1. "Creating Value": how can companies create something new? and 2. "Profiting from Value": how can companies profit from innovations? The course will use practical examples from numerous industries such as world-class restaurants, music, consumer goods, electricity or the software industry.

#### Intended learning outcomes

At the end of the module students are able to understand:

- The importance of innovations
- The sources of innovations
- The New Product Development process
- The roles in the innovation process
- The importance of intellectual property rights
- How innovations diffuse in the market

In this module, students work on a scientific question stemming from one of the research teams involved in the study program. In doing so, they apply the methods of the discipline. The duration of the work is limited to a defined period of time. The students are supervised by a member of one of the research teams involved in the program.

# Intended learning outcomes

Students will be able to identify a scientifically relevant question, examine the state of research, and describe and evaluate it in order to derive research desiderata and research questions. They develop a methodical approach and test hypotheses/answer the research questions. The goal is to gain knowledge against the background of existing theories and findings. In empirical work, students learn to collect data for hypothesis testing and to evaluate it in a methodologically correct way. Furthermore, students will be able to write scientific papers according to the requirements of the discipline.

**Courses** (type, number of weekly contact hours, language — if other than German)

No courses assigned to module

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Master's thesis (approx. 80 pages)

Language of assessment: German and/or English
